Share digital documents with external business partners

 **Go live faster**
with a proven
introduction
approach

 **Boost compliance**
of shared content

 **Maximize adoption**
of sharing features

 **Benefit from**
unparalleled
expertise

Sharing business documents in a secured and controlled way is more important than ever. The increasing number of people working from home requires tools that support secure, digital collaboration.

With the OpenText Documentum D2 Integration with Core Share FasTrak, OpenText Professional Services experts have built a best practice procedure to enable organizations to share business documents in a secure way, establishing a framework to control and manage shared content.

Go live faster with a proven introduction approach

The FasTrak follows a proven methodology to help customers to go live rapidly. OpenText consultants will connect an organization's platform to the OpenText™ Core Share SaaS application and review its existing OpenText™ Documentum™ D2 architecture to ensure everything is in place to support end users with the new functionality.

Manage the compliance of sharing documents

The OpenText project team will help establish a compliance framework for sharing documents. This begins with configuring sharable workspace types, document types, users and groups.

Create a new virtual office for all staff. OpenText Core allows teams to:

- Collaborate on projects from an oil rig, airplane or office any time on any device.
- Migrate old content from legacy systems to OpenText™ Core Share, allowing access on mobile devices for external project members.
- Keep a secure record of all master agreements and share them with preferred contractors and suppliers.

Maximize adoption

Even though the new functionality is intuitive, it is important to understand its security and control features. Before the project starts, OpenText experts will work with project teams through functional workshops to ensure they get the most out of the new features.

Of course, adoption challenges also extend to the end users, so the FasTrak can easily be augmented with OpenText Learning Services to train users on the new features.

Buy with confidence from the developer of Documentum D2 and Core Share

Through the FasTrak, organizations benefit from OpenText's experience, expertise and innovative problem-solving in implementing Documentum D2 solutions. OpenText delivers as one team. Professional Services has unparalleled access to Customer Support and Product Engineering teams, who share mutual accountability for customer success and satisfaction. Professional Services is a global organization with more than 3,000 team members who have nearly three decades of experience and a content practice with domain expertise and relationships.

Key security features

Permission

Control which Documentum Server and Documentum D2 users have access to sharing

Security

No inbound connection from OpenText Core Share back into Documentum D2 is required

Control

Control the folders and content that is sharable using configuration

Protect

External users only need access to Core Share and never access Documentum D2 directly
