opentext™

OpenText Documentum xCP Migration Assessment Service

Certified Professional Services experts use a standardized approach to define the best upgrade path between xCP 1.x to xCP 20.x for organizations. Using best practice methodologies a detailed report is provided to help plan migrating and converting workflows, data model, forms, reporting, integrations, customizations and user interface.

100+ man years ofexperience on xCP

20+ successful largescale enterprise migrations

3x improvement inspeed of deployment

60% average performance improvement

Migrating to the latest version of Documentum xCP may seem challenging for organizations who don't have in-house know how on the newest innovative features and functions. When migrating from xCP 1.x to xCP 20.x, there is no document migration required, all the permissions will be honoured and the document types and workflows can be converted to the new version. OpenText Professional Services can provide expertise and guidance on which elements can be easily migrated and those that need a more planned approach.

The assessment is the starting point of an upgrade from Documentum xCP 1.x to xCP 20.x. Professional Services consultants from the OpenText xCP Practice will provide assistance on business requirement analyses and technical implementation tasks to help create a draft migration strategy and plan—including cost and timeline. This will help to determine the complexity of the migration, detect showstoppers and provide the opportunity to deliver an enhanced user experience.

opentext™

Deliverables:

Assessment report on current OpenText™ Documentum xCP application, including:

- Outline of key functionalities
- Outline of main technical components
- Integrations

Draft Migration/Upgrade Plan

- Corresponding xCP 20.x functionalities and components for replacement
- Level of migration complexity of each key functionality
- In-place migration or data migration determination for xCP 1.x

With our fixed-price Documentum xCP 1.x–xCP 20.x Assessment Service, our Professional Services consultants work with organizations to understand which solutions can enable them to solve any business challenges:

- User Interface Experience
- Performance Optimization
- Integrations
- Analytics

Assistance will be provided on business requirement analysis and technical implementation tasks to help understand the best migration strategy and plan – including cost and timeline. The assessment is the starting point of a migration project from Documentum xCP 1.x to xCP 20.x. The assessment service will determine the complexity of the migration, detect showstoppers, and provide a migration/upgrade plan with cost estimation.

100+ man years of experience on xCP

OpenText consultants from the xCP Practice Group have over 100 man-years of experience with Documentum xCP. All are certified on the xCP Platform and have performed migrations and upgrades across all vertical industries including commercial, financial, healthcare, energy, manufacturing and federal.

20+ successful large–scale enterprise migrations

OpenText Professional Services has migrated more than 20 large-scale enterprise applications from 1.x to xCP 20.x. We are the trusted services organization that can help organizations migrate or upgrade xCP applications so they can benefit from the latest features of xCP 20.x.

Faster Deployment:

Documentum xCP 20.x has an integrated deployment service that deploys to the repository, web application, indexing and reports—all at the same time. The application can also be deployed using Maven and other standard tools. Assistance can be provided to containerize applications to deploy on-premises, in a hybrid environment, or in preferred clouds, such as Google Cloud Platform, AWS, Microsoft Azure, or OpenText Cloud.

Performance Improvement:

Upgrading to Documentum xCP 20.x provides performance improvements at multiple levels. With the application framework moving from WDK to REST and ExtJS, the execution of the application is increased by an average of 60%. Additional improvements in process engine and repository services provides an additional boost to performance.
