

PRODUCT OVERVIEW

OpenText Extended ECM Documentum for SAP Solutions

Combine structured data and processes managed in SAP with unstructured content managed by OpenText Documentum for a single source of truth

Simplify the IT landscape

Improve manpower efficiency

Optimize business processes

Eliminate content silos

An intelligent enterprise must leverage all sources of information to enable intelligent decision-making and outpace competitors. If this information is managed inconsistently and stored and accessed in different business applications, the user cannot fully benefit from the power of managing content in context and has to perform extra work, constantly switching between windows and in many cases, typing information twice.

OpenText™ Extended ECM Documentum for SAP® Solutions combines SAP® processes, which manage structured data and OpenText™ Documentum™ solutions, which manage content and unstructured data. It enables users to easily access all the information contained in Documentum directly from inside SAP, increasing efficiency and enriching business processes.

Simplify the IT landscape

Businesses are striving to reduce the number of applications they use. To be efficient, they must focus on their core competency and spend less time on tasks not essential to their business, such as IT. Extended ECM Documentum for SAP Solutions simplifies the IT landscape, reduces the number of applications and decreases the overall costs of ownership. In addition, customers are looking to deploy their solutions in a number of different deployment models – with Extended ECM Documentum for SAP's cloud native architecture, customers can deploy anywhere from on-premises to hyperscaler platforms. This enables faster deployments and upgrades giving users new features faster.

Improve manpower efficiency

Technology plays a vital role in today's digital world. Qualified human labor is a scarce resource and modern companies cannot afford to waste an employee's time on labor-intensive tasks. Extended ECM Documentum for SAP Solutions brings the content inside SAP, helping users work up to 35 percent faster by avoiding the need to switch between applications.

Optimize business processes

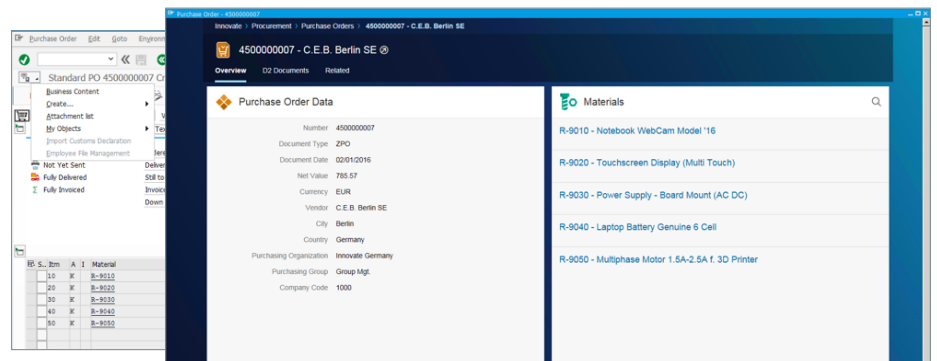

Extended ECM Documentum for SAP Solutions features powerful functionality to support efficient, cost-effective and holistic content management. It allows organizations to make the most of their investment in SAP and Documentum software by eliminating the need to incorporate separate solutions for business application connectivity and integration, compliance reporting, archiving and record management.

Eliminate content silos

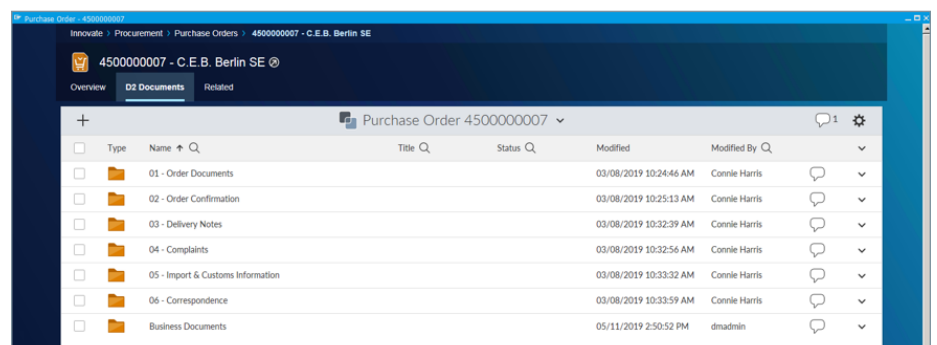

Information is the key to success for the modern business. If it is outdated or inconsistent, it can lead to severe problems, potentially even lost revenue.

Extended ECM Documentum for SAP Solutions delivers standardized, advanced content services to SAP business applications, removing the effort and cost of integration while eliminating the risk generated by an integration project and version compatibility.

The integration of the Extended ECM Documentum into SAP applications goes beyond simple, point-to-point attachment of documents inside SAP transactions, providing the information backbone to unite business applications by making content easily available to business users as an inherent component of the end-to-end business process.

Modern, simplified user interface

Purchase Order workspace accessed directly from SAP GUI
