

SERVICE OVERVIEW

OpenText Core Share for SAP Solutions FasTrak

Enable your organization to share digital documents with external business partners by connecting your OpenText™ Extended ECM for SAP® Solutions system to OpenText™ Core Share.

Go live faster

Start with proven introduction approach

Compliance

Manage shared content

Control

Establish approval policy for sharing content

Maximize adoption

of sharing feature

Sharing business documents in a secured and controlled way is more important than ever. Additionally, the increasing number of people working from home requires tools that support digital collaboration. OpenText™ Extended ECM for SAP® Solutions is ready to support various sharing scenarios. It easily connects with OpenText™ Core Share.

With the Core Share for SAP FasTrak, OpenText Professional Services experts have built a best practice procedure to enable your organization to share business documents in a secured way, establishing a framework to control and manage shared content.

Go live faster with new functionality

The Core Share for SAP FasTrak follows a proven methodology to help customers go live rapidly. OpenText consultants will not only connect Extended ECM for SAP to the Core Share SaaS application, but also review your existing Extended ECM for SAP architecture to ensure everything is in place to support your end users with all the newest functionality.

A Professional Services success story

Secure digital collaboration and mobility

Waikato Regional Council worked with OpenText Professional Services to embed secure digital capabilities to its platform and provide this to their end users and business partners.

“The ability to share information directly from OpenText Content Suite with the contractors has been really valuable. They are all looking at the same document without the back-and-forth of email or giving full access to our systems.

With Core Share, you can see when external people viewed documents and what they have done. It gives you much better visibility on who is using your information and how.”

Joanne Bell
Information Management
Team Leader

Manage the compliance of sharing documents

The OpenText project team will help you establish a compliance framework for sharing documents. This begins with configuring sharable workspace types, document types, users and groups. The introduction of approval workflows for new shares enhances your control over what will be shared with whom. While the system automatically monitors the existing shares for duration, additional reports give your administrators insight into currently open shares.

Bring your project team up to speed

While the new functionality is easy for business users to use, it is important to understand the security and control features that are available. Before the project starts, OpenText teaches your project team the features of the new functionality. This ensures they get the most out of the functional workshops with the OpenText consulting team.

End user adoption

Adopting new functionalities and processes can be a challenge inside larger organizations. The Core Share for SAP Solutions FasTrak supports business users with an eLearning approach so they can educate themselves on the new features when they need it, and when it is most convenient for them.

Key security features

Permissions	Security	Control	Protect
			
Control your Extended ECM users who have access to sharing features	No inbound connection from Core Share back into Extended ECM is required	Control the folders and content that are shareable using whitelisting and RM Security Clearances	External users only need access to Core Share and never access Extended ECM directly
