# eDiscovery deployment: What is right for you?

A guide to OpenText flexible eDiscovery and investigation solutions

True eDiscovery partnership means having a technology and services provider who recognizes there is no one-size-fits-all approach. That is why OpenText offers a full spectrum of flexible deployment options for eDiscovery and investigations—public cloud, private cloud, on premises, bring your own cloud (BYOC), or hybrid. Unlike vendors who put their business model priorities above client needs, OpenText puts your needs first, delivering the flexibility to build the right solution for every situation or organizational requirements.

	Multi-tenant OpenText AWS Cloud (Public cloud)	Single-tenant OpenText AWS Cloud (Private cloud)	On-premises (or BYOC)
Deployment	Multi-tenant OpenText AWS Cloud (Public cloud)	Single-tenant OpenText AWS Cloud (Private cloud)	On-premises (or BYOC)
