Shield and Recover Bundle

Strengthen your defenses by protecting your business-critical data at the source

It's time to level up with the OpenText Shield and Recover Bundle, which helps you:

- Recover fast and reduce downtime costs with our Cloud-to-Cloud Backup.

- Secure SaaS application data with unlimited backup and recovery, from any point-in-time.

- Stay informed on the latest threats with our Security Awareness Training, featuring frequent content updates and useful, interactive content.

- Transform end users into a resilient, first line of cyber defense with our Security Awareness Training.

In today's digital landscape, businesses face an ever-evolving array of cyberthreats stemming from outside attacks and internal user threats. Even with the most robust measures in place, humans are still the weakest link when it comes to cybersecurity. Unfortunately, all it takes is an employee clicking a malicious link, falling prey to a smishing text, or sharing confidential data on public networks for your business data to fall into the wrong hands.

Training employees to recognize these risks and stay vigilant in their day-to-day is an ongoing battle. If something was to happen, it is essential to have the right components in place to keep your business running.

OpenText Shield and Recover Bundle

The OpenText™ Shield and Recover Bundle provides a powerful combination of proactive and reactive security measures that help businesses prevent cyberattacks and recover quickly if one occurs. Our Security Awareness Training helps strengthen your organization's defenses to avoid these attackers from being successful in the first place. If they are, our Cloud-to-Cloud Backup solution enables you to quickly restore data to avoid downtime or lost productivity. Together, these two solutions help strengthen your defenses by implementing proactive and reactive security measures to protect your business-critical data at its source.

OpenText Core Cloud-to-Cloud Backup

OpenText™ Core Cloud-to-Cloud Backup offers comprehensive backup and recovery of SaaS application data—Microsoft 365, Google Workspace, Salesforce, Box and Dropbox—and boasts central management, granular restore, rapid recovery, and flexible retention options. The purpose-built backup solution ensures IT administrators can recover as much or as little SaaS application data, as necessary.

- Automate backups of Microsoft 365, Google Workspace, Salesforce, Box, and Dropbox.

- Flexibly search and recover items, mailboxes, or sites at any granular level.

- Easily recover data with point-in-time recovery.

OpenText™ Core Security Awareness Training

Security Awareness Training (SAT) provides continuous, relevant, and measurable education and testing that businesses need to help minimize risky user behaviors and achieve cyber resilience. The full-featured phishing simulator provides an ever-expanding template library based on real-world scenarios. Templates are categorized and regionalized for ease of use, while schedule randomization enables staggered delivery to maximize campaign impact.

One step to making your business cyber resilient

The Shield and Recover Bundle can help you protect your organization and prevent threats from happening in the first place. If an incident does occur, we help you seamlessly recover your data. Paired with our other solutions, the bundle provide a more comprehensive approach to strengthen your cyber resilience and reduce the impact of advanced threats.
