OpenText RightFax PDF Module

The RightFax PDF Module allows you to easily send PDF and Postscript files as faxes. PDF is native to many of the most widely used back-office and desktop applications.

OpenText RightFax Searchable PDF Module

The RightFax Searchable PDF Module uses optical character recognition (OCR) to convert sent and received fax images to searchable text. Instantly identify and retrieve the fax(es) you need by searching for keywords instead of reading through hundreds or thousands of pages.

OpenText RightFax Bar Code Routing Module

The RightFax Bar Code Routing Module automatically routes inbound faxes by reading a bar code on the cover sheet or first page of a document. By minimizing user intervention, businesses will see increased productivity.

OpenText RightFax SecureDocs Module

SecureDocs certified delivery uploads your files to a secure web server in your own data center, and emails a link to the recipient. With password protection and secure web access, your files are safe. To aid in security and compliance, SecureDocs also provides confirmation of receipt and an audit trail. PDF file encryption enables certified and encrypted delivery.

OpenText RightFax Shared Services Module

The RightFax Shared Services Module enables two to four RightFax Servers to operate as a single unit by sharing a single database. It increases performance and capacity by distributing workloads across servers. The module adds high availability through duplication of critical system functions, so it can keep running even if sites or servers go offline.

OpenText RightFax XML Generator Module

The RightFax XML Generator Module allows integration with XML-based systems and applications for both sent and received faxes.

OpenText RightFax Integration Module

The RightFax Integration Module ties back-end systems into RightFax to automatically deliver documents by fax, email, print, SMS, certified email, or certified and encrypted email. Delivery from Oracle, SAP, ERP, and CRM systems is easily customizable with RightFax facsimile command language (FCL), XML, Java, and more. Delivery confirmation and audit trail data can be inserted into ERP and other back-office applications.

OpenText RightFax Business Integration Module

The RightFax Business Integration Module empowers your small business or department to automatically deliver documents. Contains similar capabilities to the RightFax Integration Module, but it is limited to two inputs and only fax or print output.

OpenText RightFax Encryption Module

A new licensed module which encrypts all fax images in the RightFax image directory, encrypted with TripleDES 192 bit security, helping organizations achieve compliance with regulations such as PCI-DSS and HIPAA.

OpenText RightFax Vault

When combined with OpenText Alchemy, it provides scalable, efficient fax archiving in RightFax, which allows customers to address compliance and security requirements with the ability to easily and securely search and retrieve sent and received faxes.

OpenText RightFax Connector for Microsoft® Exchange®

The RightFax Connector for Microsoft Exchange enables users of Exchange Server 2007 and 2010 to conveniently receive faxes into Microsoft Outlook and fax from Outlook. A fax button makes sending easy. Users can organize documents in Outlook, and companies can optionally archive them via Exchange.

OpenText RightFax Connector for IBM® Lotus Notes

RightFax fully integrates with Lotus Notes/Domino email systems. Businesses can choose from a variety of integration levels to leave the Notes clients untouched or incorporate faxing features directly into the clients.

OpenText RightFax Connector for SAP® ERP

Use the RightFax Connector for SAP ERP to seamlessly integrate inbound and outbound fax with your SAP systems. You can optionally integrate RightFax faxing directly into SAPoffice.

OpenText RightFax Connector for IBM® FileNet® Content Manager

The RightFax Connector for FileNet integrates RightFax with IBM FileNet. This allows companies to store faxes in FileNet for archival, indexing, search, and workflow processes. It also allows you to send FileNet documents as faxes.

OpenText RightFax Connector for eDOCS

The RightFax Connector for eDOCS allows users to securely deliver documents from eDOCS, and import received documents into eDOCS. Companies benefit from the synergy between powerful document management and market-leading fax and document distribution.

OpenText RightFax Connector for Microsoft® SharePoint®

The RightFax Connector for Microsoft SharePoint allows users to send and receive faxes from SharePoint. The connector adds "fax" as an option on the drop-down document menu, fax-enabling entire document libraries. It can also receive faxes directly into SharePoint document libraries for archival, workflow, index, and search.

OpenText RightFax Connectors for MFPs

OpenText offers general-purpose RightFax SMTP and XML connectors for MFPs, as well as purpose-built, integrated RightFax connectors for the leading MFP manufacturers. The connectors make faxing easy and record fax usage from MFPs with user-specific audit trails. These connectors eliminate the need for dedicated analog phone lines and expensive fax kits.
