Boost Your Multi-User Performance

SQLBase is a fully relational, high performance, embedded database that allows organizations to manage data closer to the customer, where capturing and organizing information is critical. SQLBase provides what other database companies cannot deliver - a self-recovering, maintenance-free embedded database architecture that enables users from corporate IT to ISVs to focus on the business application itself - not the underlying database technology. With its small footprint, easy installation and low TCO, SQLBase is the embedded database of choice for organizations around the world.

Boost Your Multi-User Performance

SQLBase 12 greatly enhances database scalability and multi-user performance to keep pace with ever growing amounts of application users, application complexity and database growth. SQLBase 12 introduces native operating system multithreading to achieve outstanding scalability and multi-user concurrency. The performance of SQLBase 12 is highly scalable and does not decrease with a growing numbers of users.

Perfect Embedded Database for Your Business Solutions
