opentext™

Dimensions RM

Dimensions RM offers an efficient, web-based Requirements Management solution. A full set of features support collaboration between all stakeholders, enabling end-to-end development in traditional, agile, hybrid and multi-modal environments equally well.

What's New Over the Last 2 Years

OpenText™ Dimensions RM is where ideas turn into deployments. Complex products and projects need the full support of an end-to-end requirements management lifecycle tool in order to meet today's product development challenges. Here are some key updates to the Dimensions RM product that will help you get there:

- MS SQL Server database support provides standardization without compromising access
- Agile capabilities enable teams to work efficiently
- Enhanced reports for unparalleled visibility
- Workflow automation speeds up delivery
- Native integrations connect systems to keep data in sync

Key Enhancements

Reporting Enhancements: The reporting module brings new quick search options, value sum support, and embedding of graphical reports in documents. Set relationship constraints for each class in traceability reports and filter time stamps by date.

Team & Workflow Management: New capabilities allow you to define teams and assign team members, enabling you to use filters and report on team capacity, workload, and performance. Take advantage of automatic workflow transition execution on requirements based on document and collection workflows.

Agile Capabilities: Teams can work within an Agile framework easily while keeping their work organized into backlogs, sprints, and epics.

Enhanced Agile mapping allows you to look ahead and burn-down reports keep releases on track.

Document Enhancements: New options for publishing documents, including the creation of a direct-URL and exporting all columns to Excel, have been added. Users are now able to refresh cross references in documents and see linked test cases as well.

User Experience: In every release, we implement new customers' requests while bringing new usability enhancements.

- Comprehensive role-based dashboards
- Access information quickly in documents, attachments, and reports with filters and Quick Search
- Create favorites for documents, collections, and baselines

Integrations:

- **OpenText™ Hub Connector:**
  - Enable integrations to OpenText™ solutions like Silk, Atlas, Rhythm as well as to 3rd party solutions like TFS, Rally, etc.
  - Enhanced synchronization with HP ALM/QC to support multi-selection fields and date fields in various formats.
- **Atlassian JIRA:** New native bi-directional integration with Atlassian JIRA based on RM SyncEngine

MD PnP

"We are collaborating with medical practitioners and device manufacturers to visualize, organize and prioritize the requirements that will define the future of device interoperability. For MDPnP.org the requirements are the product, and Serena (now part of OpenText™) has provided the perfect wrapper."
