opentext™

OpenText™ connectors for Microsoft® Power Automate

Seamlessly integrate OpenText solutions with Microsoft Power Automate events and workflows

Reduce costs for new integrations

Increase user productivity and insights

Improve management of IT tools

Support user-based and business process flows

Associated OpenText products

- OpenText™ Extended ECM
- OpenText™ eDOCS
- OpenText™ Core Share™

Effective business processes require utilizing content and data often split between key business applications and collaboration platforms. Unfortunately, important content is sometimes hosted on systems that are not integrated to others due to high complexity or bandwidth limitations. Users must be able to harness this content and data in workflows in order to operate at peak efficiency.
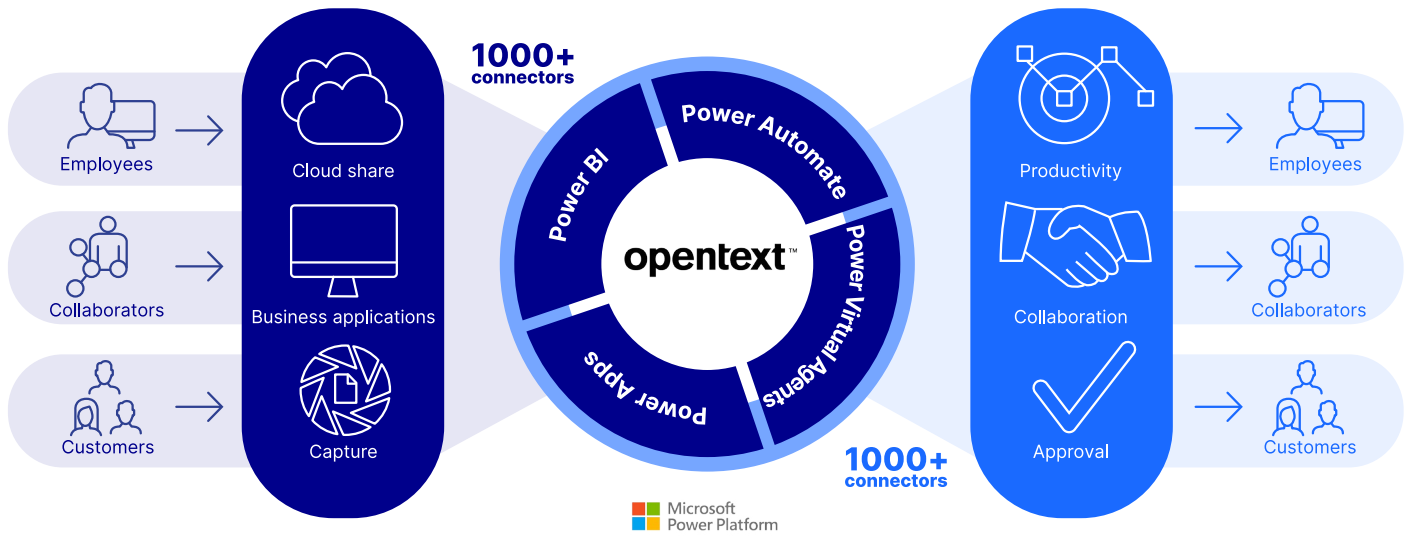

OpenText connectors for Microsoft Power Automate empower organizations to easily automate document routing, content approvals, synchronization, data extraction and other tasks without the need for extensive coding or IT involvement. They also help control costs, manage available integrations and reduce the risk of data loss.

The connectors also provide advanced features, such as optical character recognition (OCR), machine learning-based classifications and other AI capabilities, enabling more sophisticated automation. Organizations can deploy supporting processes in minutes using the sample templates. This boosts user productivity and increases the return on investment by adapting existing solutions in new scenarios.

Feature	Description
Triggers	Start workflows based on events and reduce manual actions. Change data in various systems, update document versions and move content from one system to another based on rules.
Actions	Automate content tasks with just a few clicks to optimize efficiency and extend the solution.
Notifications	Receive notifications in any application or device about important events in key applications.

opentext™

QuickStart templates

Feature	Description
Templates	Quickly deploy solutions without IT or development efforts through a range of templates.
Hybrid	Run flows using Microsoft Power Automate Desktop. Flows can be run in the cloud or utilizing on-premises data with On-Premises Data Gateway.
