INDUSTRY OVERVIEW

OpenText Defense and Intelligence solutions

Modernize IT systems, improve decision-making and achieve greater mission readiness with Defense and Intelligence solutions from OpenText

Detect and respond to advanced cybersecurity threats

Facilitate multi-agency and partner collaboration

Modernize to improve processes across users and systems

Collect and classify enterprise data

Defense and Intelligence organizations must remain vigilant against increasing cybersecurity threats to protect economic, technological and military advantages. Outdated IT systems and lack of content integration can impact an organization's response times, security and mission effectiveness. And information silos limit organizational visibility and agility, threatening realtime decision-making.

Detect and respond to advanced cybersecurity threats

The impact of cyber threats continues to grow, undermining information systems, military responses and public safety. OpenText Defense and Intelligence solutions provide early risk detection and automated threat response. By uncovering, validating and assessing potential threats, organizations can boost security across all endpoints to mitigate risk. Proactive identification, classification and remediation of sensitive data across the enterprise offers the deepest level of insight and control over electronic data.

> *"Taking advantage of data is at the heart of digital government. It's the central asset to all that government oversees and provides. The ability to leverage that data strategically in real time will significantly improve government's ability to seamlessly deliver services, despite increased strain on finite resources."*

Rick Howard
Gartner Research
Vice President 2019

Speed time to value

Organizations must embrace digital strategies and technology to boost efficiencies and productivity. OpenText Defense and Intelligence solutions accelerate mission impact and support digital business automation with purpose-built applications. Organizations benefit from connected content to support current and future digitization initiatives and to eliminate paper trails that slow processes and response time to citizens. Leveraging artificial intelligence and analytics automates low-value tasks and operationalizes big data insights for improved decision-making.

Modernize to improve processes across users and systems

Defense and Intelligence organizations are challenged to boost collaboration while maintaining control over content integrity and lifecycles. OpenText Defense and Intelligence solutions automate manual tasks and eliminate content duplication, simplifying access and improving content-centric collaboration among departments. They also empower defense and intelligence organizations to delve deep into massive amounts of data and leverage self-service data visualizations to increase automation and operational efficiencies.

Collect and classify enterprise data

In order to take control of content and minimize the volume of data requiring human review, organizations must quickly identify the facts that matter for investigation, compliance and governance. OpenText Defense and Intelligence solutions collect information from various sources without disrupting workflows, delivering earlier insights and better results. Organizations also benefit from the ability to preserve, analyze, classify and review electronically stored information (ESI), combined with transparent reporting and automated redaction of sensitive personal information.

OpenText stands apart

Trusted by global Defense and Intelligence organizations, OpenText integrates the most advanced technologies with an emphasis on innovation, allowing organizations to focus solely on their mission of locating, preventing and defeating threats. As the leader in enterprise information management, OpenText enables organizations to drive digitization, create an intelligent information core and protect data to optimize mission readiness.

OpenText Defense and Intelligence solutions

Quickly build intelligently automated, content-rich, connected processes	Manage the lifecycle of content with efficiency and compliance	Leverage advanced artificial intelligence to enhance automation and decision-making
OpenText™ AppWorks™	**OpenText™ Extended ECM for Government**	**OpenText™ Magellan™**
Continuously monitor for and detect anomalies across all endpoints	Augment detection and response with end-to-end orchestration and automation	Scan, search, collect and secure forensic data for internal investigations and federal law enforcement
OpenText™ EnCase™ Endpoint Security	**OpenText™ EnCase™ Advanced Detection**	**OpenText™ EnCase™ Forensic**
Improve business intelligence, ensure compliance and mitigate risk	Replace paper-based systems with a single source of the truth	Employ machine learning for eDiscovery and investigations
OpenText™ EnCase™ Risk Manager	**OpenText™ Cloud™**	**OpenText™ Axcelerate™**
