

SERVICE OVERVIEW

OpenText™ Core Signature Service

Empowering developers to easily build and integrate document preparation and secure, rapid electronic signing into existing OpenText solutions or third-party offerings.

 **Easily integrate e-signing** into business process workflows

 **Expedite deals, partnerships and agreements.**

 **Securely sign—** anytime, anywhere

OpenText™ Core Signature Service enables developers to easily embed electronic signing into new or existing applications, including the ability to easily prepare, review, send for signature, collect and manage signed documents.

Quickly build turnkey electronic signing flows into applications to help reduce errors, maintain compliance and save costs.

Core Signature Service can reduce the time and burden associated with the paper signature process. It can help ensure businesses meet security, compliance and information governance standards through its complete, easy-to-monitor audit trail, capturing all activities associated with the document, time stamps and the location of where the document was signed.

Core Signature Service empowers your document approval process at massive scale. It allows organizations to provide electronic signature capabilities to build simple, secure agreement processes for customers and their applications.

Sign anytime, anywhere to keep your business moving forward

Unlike other stand-alone signature vendors, Core Signature Service can easily integrate with other Core services like OpenText™ Core Workflow Service, OpenText™ Core Content Service and OpenText™ Core Capture Service, to build new applications and extend existing solutions with incredible time-to-value. OpenText™ Core for SAP® SuccessFactors® customers can leverage Core Signature Service to engage employees in an effortless, end-to-end approval process that is fully integrated and customizable to their business.

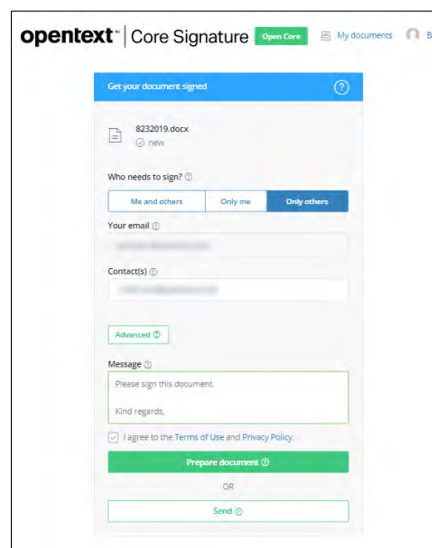

OpenText™ Core Signature integrates into the SaaS content services platform, OpenText™ Core Content to seamlessly incorporate eSignature functionality within a robust content management system.

Secure signing: Compliant with key eSignature laws.

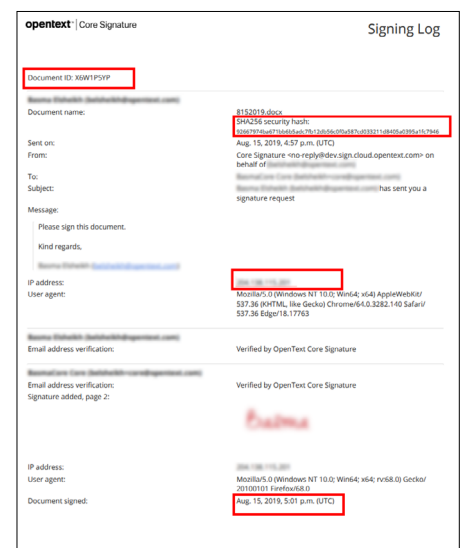

- Securely isolate data for Core Signature Service-powered applications using OT2 (OAuth2 support) authentication and tenancy.
- Deliver a stringent, compliant and secure signing process with digital certificate support for document signing, ensuring that every signing action is validated with a hardware-stored digital certificate.
- Enhanced features include support for in-person signing, request reminders, document expiry, events framework and support for asynchronous event handling via webhooks.

Simple signing: Make signing a breeze!

- **A pre-built UI** helps with placeholder location, configuring signing order and more.
- **Document tagging** embeds tags using your document editor-of-choice to auto-populate placeholders, enabling users to fast-track through document preparation and automate the document preparation step.
- **Templates** allows users to build once and reuse many times. Templates can be saved and recalled easily, making it easy to send a document multiple times without having to create it from scratch every time.
- **Document routing** specifies document routing parameters programmatically, such as signers and signing order.
