

PRODUCT OVERVIEW

OpenText™ Exstream™

Captivate customers with engaging, personalized communications across all channels

Engage customers with personalized content across the entire journey

Deliver digital-first communications across all channels and devices

Optimize business decisions through data analytics

Scale globally and run in the cloud, hybrid, or off-cloud

To be competitive, organizations must provide frictionless, digital-first interactions throughout the customer lifecycle—from marketing and customer acquisition to onboarding and servicing. It's time to modernize and leverage proven technology built for speed and simplicity.

OpenText™ Exstream™ is the market-leading customer communications management (CCM) solution. It enables organizations to deliver consistent customer experiences by designing ultra-personalized, compliant communications.

Organizations can run anywhere and scale globally in their preferred public cloud, hybrid environment, or off-cloud.

Improve customer engagement through personalization

To hold customers' attention, brands must find the right balance of communication cadence and personalization. Too much, and customers get annoyed. Too little, and they forget the brand altogether. Add in new expectations for consistent communications across all channels—especially digital—and it becomes clear how challenging it can be to deliver experiences that exceed expectations.

OpenText Exstream with Experience Aviator

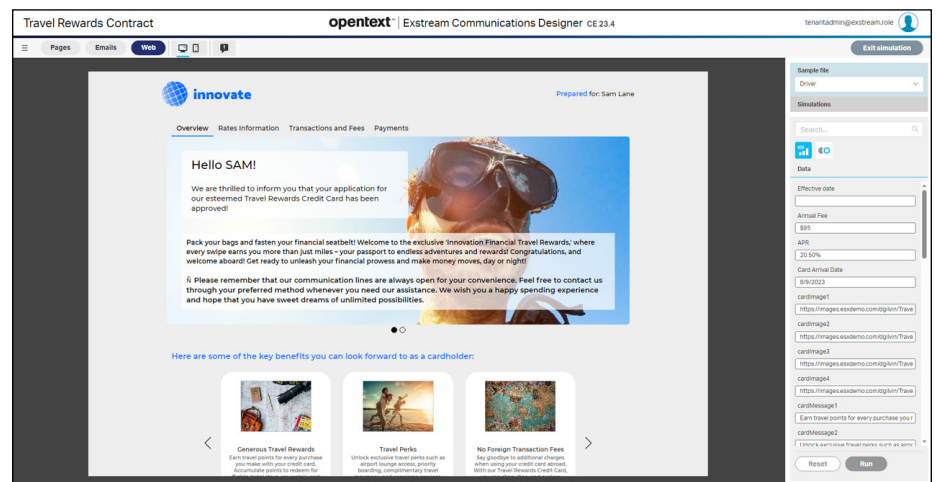

Utilize Experience Aviator with AI-assisted authoring to create new communications and improve existing content. Use the built-in grammar, sentiment, and reading comprehension scores to create better content.

Unleash creativity with HTML5 design

For the visionary digital leader and forward-thinking CMO, OpenText created a groundbreaking solution that redefines the landscape of digital communication: low or even no-code HTML5 design. This innovation empowers users to craft captivating, digital-first communications without the need for complex coding expertise.

Imagine bringing your boldest ideas to life with stunning personalized web communications, emails, and dynamic landing pages that captivate your audience—all created by business users. This game-changing approach accelerates your time-to-market and fosters seamless collaboration between design and development teams. Unleash your creativity and transform your brand's online presence into an immersive, visually striking experience that delights and converts while keeping pace with the dynamic demands of the digital age.

Ensure consistency and content personalization across communications and channels.

Business users can configure content in multiple ways to provide more compelling, customized communications, including using effective expiration dates to ensure the correct version is delivered at the right time. Content variant management ensures communications can easily be tailored by language, geography, demographic data, or other segments.

Increase collaboration, compliance, and productivity

Exstream makes it easy for marketing, legal, compliance, and other business users to collaboratively create, modify, and approve customer communications while in the office or working remotely. Design, authoring, and interactive editing are done via a web-based, unified user interface. The cloud-native, package-less design environment is lightning fast, with no desktop dependencies. Content blocks within the communication template can be locked down or made editable based on roles or personas, ensuring the right people have the proper access. Business users have the tools they need to get new messages and offers to customers faster, without waiting on help from IT.

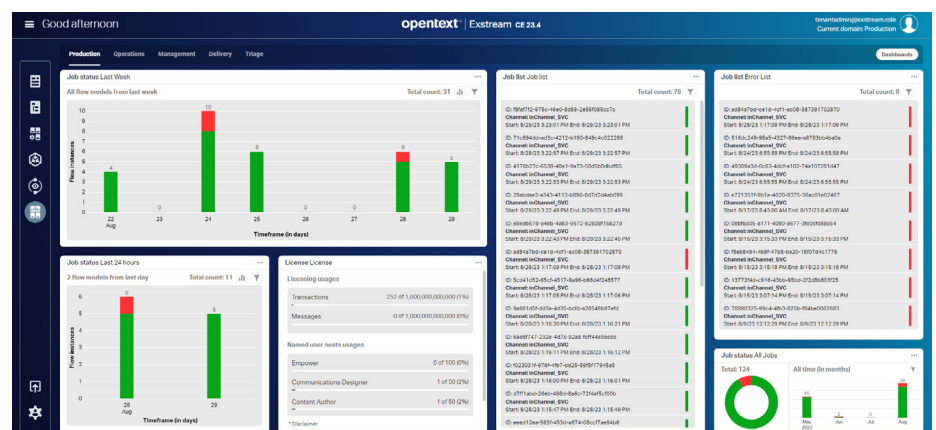

Exstream mitigates compliance risks by tracking and managing the approval of regulatory language changes made in one location and then applying those changes everywhere they're needed. Compliance, legal and subject matter experts can collaborate throughout the communication development, review, and approval process to streamline workflows and provide greater content control.

Exstream can also process high-volume batch transactional communications in the cloud, unlimited by production engine capabilities, to improve productivity. The solution easily supports high-volume batch communications with sub-second processing speeds.

Operational dashboards

Managing operations is all about efficiency—maximizing resources in production processes increases quality, throughput, and ultimately, profitability. The secret to success is operational transparency.

Ever-increasing communication generation demands make it harder for operations managers to monitor what is happening and when. Accelerate data-driven decisions with an operational dashboard that visualizes and analyzes performance metrics traditionally lost in the black box of automated communications.

"With the Exstream platform, we can make changes in a very efficient way. We don't have to completely redesign the communication."

Robert Krugman
Broadridge Chief Digital Officer

Reduce total cost of ownership (TCO) with a single, enterprise CCM in the cloud

Exstream delivers enterprise communications without enterprise complexity or cost. Cloud CCM eliminates in-house operational and maintenance costs, sidesteps complicated upgrades, and offers elastic scaling so users only pay for what they use.

Designed to handle all types of customer communications for all delivery channels, Exstream allows users to consolidate into one CCM solution and eliminate expensive-to-maintain departmental point solutions. Because it is deployed in containers, Exstream gives users the freedom to choose the cloud platform that suits their needs (AWS, Microsoft® Azure®, GPC, private, or hybrid).

On-Demand Deployment takes elastic scaling further, reducing operational costs by allowing users to run Exstream only when they need it. Spin the production engine up or down, or turn it off entirely when it is not required for greater cost efficiency.

Simplified migration and rationalization

Technology moves so quickly that not having the newest version of a chosen solution can hold organizations back. For many IT professionals and line of business owners, however, upgrading a business system can seem to be more trouble than it's worth.

Whether running an older version of OpenText CCM technology or using a competitive CCM solution, our PDF Design Import Tool, along with Exstream Rationalization can reduce the scope, time, and cost of moving to Exstream in the cloud.

Exstream differentiators include:

- No.1 CCM vendor in software capability strength and market presence
- Premier batch engine performance (up to 10x faster) with less investment in infrastructure and software licenses
- Easy integration with data and content from any application, with no need to normalize data, saving hours of processing time
- Seamless integration with leading business apps and ecosystems, such as SAP®, Salesforce®, and OpenText information management solutions
- Web-based design and authoring functionality lets non-technical users modify and publish content in Exstream templates without IT help
- The only enterprise CCM solution integrated into a complete multi-channel CXM architecture, including CMS, DAM, Contact Center, CDP, and message delivery

Choose the deployment model that fits your needs

Exstream is available as part of the Digital Experience Cloud Platform as a managed service on the OpenText™ Cloud, and as a Docker or Kubernetes container that supports any cloud (private, public, hybrid), and on-premises deployment.

Feature	Benefits
Cloud input and multi-channel output	<p>Integration with OpenText™ Notifications provides cloud-based email and SMS communication delivery, reporting, and tracking.</p> <p>Integration with OpenText™ Core Experience Insights provides analytics on each communication touchpoint in the customer journey.</p>
Unified UX	<p>Unified, cloud-based user interface for communication design, authoring, and orchestration.</p> 
Generative AI	<p>Utilize Experience Aviator for GenAI assisted authoring and content creation.</p>
Easy installation and deployment	<p>Get up and running in minutes, whether on-premises or in the cloud.</p>
HTML5 design	<p>Create dynamic, personalized mobile and web experiences.</p>
Simplified data mapping for business users	<p>Manage standard data sets and mapping for all communications.</p> <p>Efficiently manage changes and revision of data configurations.</p>
Drag-and-drop communication flow modeling	<p>Centrally manage all communication flows and approvals in a web-based environment.</p>
Optimized for cloud	<p>Deploy in your cloud of choice, as well as on-premises, as long as the customer runs Kubernetes.</p>

About OpenText

OpenText, The Information Company, enables organizations to gain insight through market-leading information management solutions, on premises or in the cloud. For more information about OpenText (NASDAQ: OTEX, TSX: OTEX) visit: [opentext.com](https://www.opentext.com).
