

# ValueEdge™ Agile

Scale Agile to new heights for faster delivery by helping Agile and DevOps teams manage work, defects, backlog, pipelines, and sprints to deliver continuous value.

## Product Highlights

ValueEdge™ Agile modernizes the way you design, manage, and optimize software delivery. It helps Agile and DevOps teams manage work, defects, backlog, pipelines, and sprints to deliver continuous value. Implement industry-standard frameworks to achieve consistent delivery and gain full traceability across diverse, decentralized teams—all while harnessing intelligent automation at scale.

## Key Features

### Optimize Value from End to End

Enhance and manage value streams from a single, intuitive interface for optimal software delivery. ValueEdge Agile connects value streams without slowing down delivery. This

enables Agile and DevOps teams to quickly identify waste and adapt to changes.

### Unlock Enterprise Agility

Build quality in with team and enterprise-level Agile support for many methodologies—from Scrum to Scaled Agile Framework (SAFe) and more. ValueEdge Agile fully integrates Agile capabilities augment existing tools and products. Leverage the agility of ValueEdge Agile to implement industry-standard frameworks for consistent delivery.

### Put Your Data to Work

Synchronize data from common Agile planning tools, such as Atlassian Jira, Broadcom Rally and Digital.ai VersionOne. Let your teams view

## Key Benefits

- Provide a central hub for developers, testers and PMOs, that connects associated teams and toolchains.
- Track development value streams and waste optimization at the team and product level.
- Harmonize requirements, backlog items, and defects for complete traceability.
- Normalize data across different digital value streams, programs, projects and instances to gain a unified view.
- Identify sensitive areas of code that are risky to change.
- Synchronize data from common Agile planning tools.

real-time results and manipulate data to make smarter decisions.

### Bring Disconnected Teams Together

Deliver high-value change across multiple product teams. ValueEdge Agile supports project and product teams who are starting or extending Agile and DevOps transformations, helping teams gain full traceability across diverse, decentralized teams.

### Amplify Your Automation ROI

Automation shortens development cycle, reduces regression cost, and improves efficiency. ValueEdge Agile lets you scale to thousands of tests and tune your automation efforts, enabling you to visualize your ROI of them and determine which areas are worth more investment.

### Key Benefits

With ValueEdge Quality, your organization will gain benefits including:

- **Maximize business value**—specify the right features and maximize resource investments, business ROI, and customer satisfaction.
- **Find risks earlier**—identify process slow down and downstream process delays before they occur.
- **Continuous quality**—measure and understand drivers and points of risk which can impact product quality in a continuous fashion.
- **Increase productivity**—spot inefficiencies in your software development and testing process.

### What's New in ValueEdge Agile

The latest features and enhancements in ValueEdge Agile connect value streams to help Agile and DevOps teams quickly identify waste and adapt to changes. To name a few, ValueEdge Agile now lets you:

- Incorporate data from CI pipelines into the application delivery process using GitHub Actions CI.
- Control your lifecycle Comprehensively from end-to-end through direct execution and UFT One support with Azure DevOps and GitLab.
- Map full digital value streams by synchronizing product entities between ValueEdge Strategy and ValueEdge Agile.
- Extend waste time tracking for backlog items to stories and defects.
- Measure team velocity per program investment.
- Adjust the names of releases to fit your team's methodology.
- Capture test coverage information directly on native Jira epics, stories, issues, or custom types.
- Support Visual Studio 2022 with the Visual Studio IDE plugin.
- Support JDK 11 with the Jira on-prem and Eclipse IDE plugins.
- And more

### Bring It All Together

When combined with other ValueEdge modules, your organization can build a software factory that scales. Simply use the modules that fit your needs and leverage a value-driven ecosystem with better cost savings.

- [ValueEdge Functional Test](#) enables anyone to easily test anything on any platform from anywhere with a one-stop shop for all your functional testing needs.
- [ValueEdge Insights](#) helps you improve flow and reduce waste with built-in AI that reaches across the entire software delivery lifecycle and shows you where to act.
- [ValueEdge Quality](#) scales continuous quality in the cloud with analytics-focused visibility.
- [ValueEdge Strategy](#) connects business strategy with Agile delivery to drive real-world outcomes.
