

# Asset operations reimagined

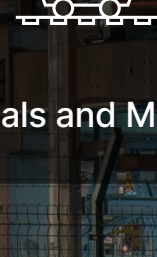

Utilities

Oil & Gas

Chemicals

Metals and Mining

## Unlock limitless outcomes across your operations

Just as every safety incident is preventable, so are operational inefficiencies and missed availability targets. Empower your operations teams with unified, AI-driven information—boosting efficiency, enhancing safety, and helping your teams exceed operational goals. When every worker has instant access to trusted data, every operational action becomes a value-creating event.

## A value proposal for the future of your operations

**\$5M**

### Productivity

10% productivity improvement for every 1,000 operations and maintenance workers translates to approximately \$5 million in productivity gains.

[\\*See success story >](#)

**\$10M**

### Availability

1% improvement in operational availability on adjusted earnings of \$1 billion is \$10 million in additional value.

**\$ Priceless \$**

### Safety

No price can be placed on preventing a fatality or significant injury. Tier 1 events can exceed \$100k. Mid-range of Tier 2 events is estimated to be \$25k.

## OpenText at a glance

**22,000**

employees

**99**

of top 100 global companies are customers

countries where we serve customers

**31M**

public cloud users

**120k+**

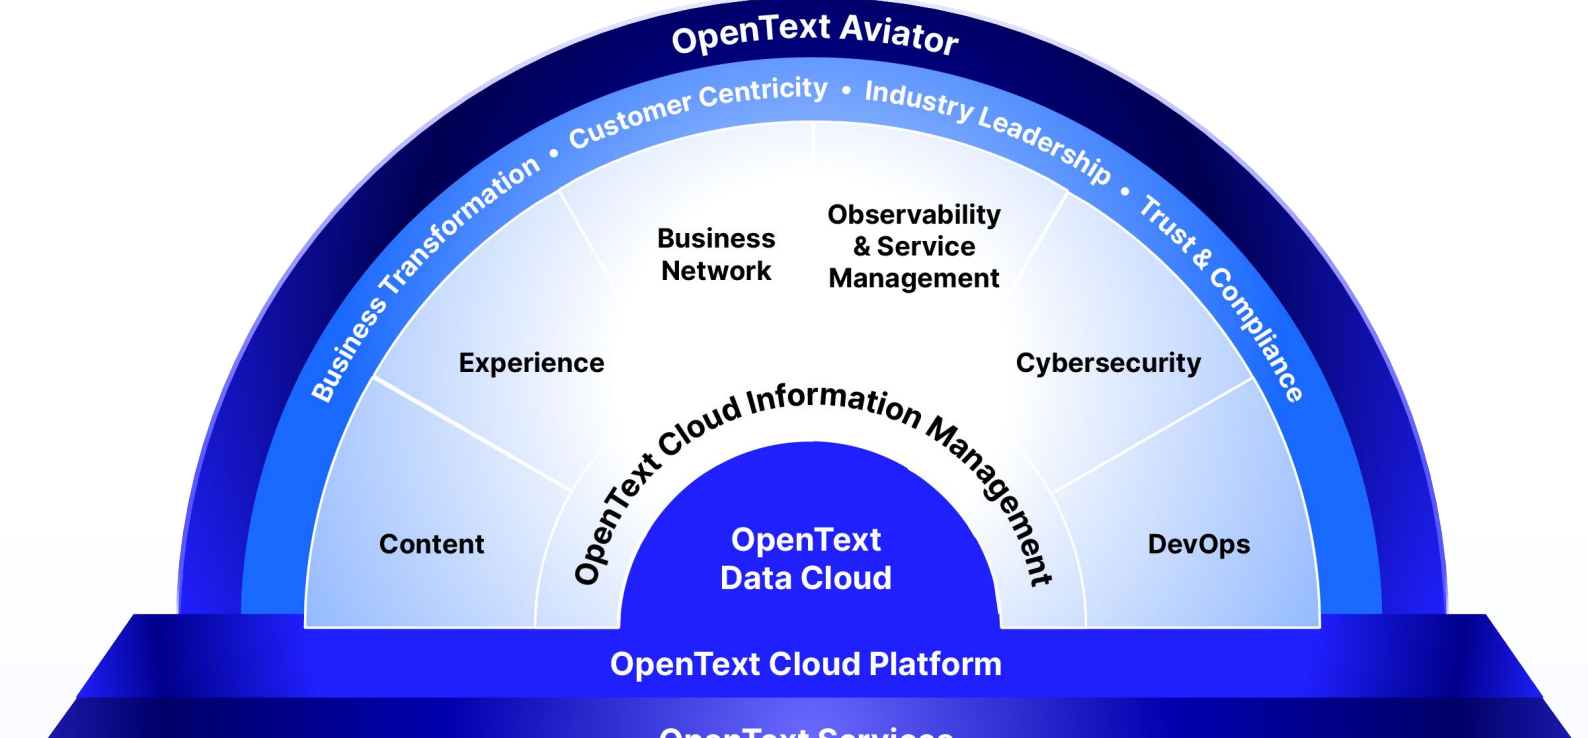

enterprise customers

**9,000**

private cloud deployments

Thousands of utilities, oil and gas, chemicals, and metals and mining companies worldwide use OpenText to empower their team members to see information in new ways.

## OpenText next-generation business solutions for asset operations

Intelligent | Secure | Multi-Cloud | Powered by AI

### Content

- Connect EAM, GIS, and Microsoft 365 to create digital twins grounded in information governance
- Activate operational knowledge
- Trust your asset documentation and automate operational processes

### Business Network

- Gain real-time visibility into the transaction and arrival status of critical material and field service status
- Securely exchange PI system data with your strategic vendors for predictive maintenance
- Optimize operational processes to meet production targets

### Analytics

- Predict failures before they occur
- Automatically classify, enrich, and migrate operational content to a single source of truth
- Digital twin search to give operational users access to answers they need faster and easier

### Observability and Service Management

- Resolve operational problems safer and faster
- Reduce operational cost and complexity
- Empower operations teams to find answers they need with private generative AI

### Experience

- Manage asset surveillance videos and imagery
- Empower your operations teams with timely alerts and messaging
- Engage your teams, partners, and field service vendors through personalization

### Cybersecurity

- Protect critical assets
- Detect cyberthreats
- Respond tactically and strategically

### DevOps

- For IT teams to accelerate software delivery to your operations teams
- For IT to automate software testing and operational workflows
- For IT to optimize software quality at scale
