OpenText Core Archive for SAP® Solutions Migration to the Cloud FasTrak

Smoothly migrate your on-premises OpenText Archiving and Document Access for SAP® Solutions to the multi-tenant OpenText Core Archive for SAP® Solutions in the OpenText Cloud

Benefits

- Move to cloud instead of upgrade, move to the cloud
- Go live faster with a new cloudbased solution
- No interruption of end users and daily business
- Concurrent operation of new cloud archive

Business documents are the foundation of business relevant transactions in any SAP system. Many customers of OpenText Archiving and Document Access for SAP Solutions have benefited from this scalable, rock-solid, and reliable repository for digital business documents over many years. However, there is increasing pressure to improve the IT landscape by simplifying current solutions and to reduce costs by using SaaS solutions..

With the OpenText™ Core Archive for SAP® Solutions Migration FasTrak, OpenText Professional Services has built a best practice procedure based on their experience with many migrations. This helps to seamlessly migrate existing on-premises OpenText Archive Center customers to the cloud.

Go live faster with new functionality

The OpenText Core Archive for SAP® Solutions Migration FasTrak follows a proven methodology to help customers go live rapidly with the new application. By setting up the new cloud based OpenText Core Archive for SAP® Solutions in a concurrent operation mode with the existing onpremises repository, all new business can be handled by the new cloud application immediately. The concurrent operation allows users both the new cloud-based archive and the existing on-premises repository in a transparent way, so they will have no change in their daily business.

Seamless migration

At Engie Electrabel in Belgium, OpenText Professional Services successfully migrated their OpenText Archive into the Cloud, while keeping the end user's daily business untouched.

"A key area for us was the migration of our existing content, around 27 TB. OpenText was able to clearly show us how the migration could be achieved, with no negative impact on our day-to-day business activities."

Joris Verberckmoes
Head of Delivery and Operations
Engie Electrabel

Read the Success story >

Concurrent operation of new cloud archive

The concurrent operation allows the decoupling of daily business of the end users from the migration of the existing content to the cloud. The FasTrak supports the organization in all phases of data migration and reduces the effort of the responsible IT team during the complete migration phase. The data can be moved to the OpenText datacenter in a secure and encrypted way.

## Retain ArchiveLink configuration

The OpenText Core Archive for SAP® Solutions Migration FasTrak approach allows customers to keep the existing ArchiveLink configuration and still connect to the new cloud-based OpenText Core Archive for SAP® Solutions. This minimizes effort for the customer, inside SAP and with related integration scenarios.

Verify completeness of migration

The Professional Services team will verify the completeness of the migration and provide a corresponding reporting to the customer. Once the migration is completed, the concurrent operation can be ended and the previously used onpremises repository can be decommissioned.
