

OpenText Hybrid Workspaces

The OpenText™ Hybrid Workspaces solution combines application containerization and streaming to let users securely run any application and access their storage on any device, anywhere

Hybrid Workspaces product feature	Feature benefits	Versions					
		24.11	24.7	23.11	23.6	23.3	23.1
Hybrid Workspaces Hub & Application Server							
Workspace Appearance Customization	Customize appearance options—such as logo, background, favorite, and theme—on a per workspace basis.	✓					
Redesigned Home	A redesigned Home tab provides an improved user experience.	✓					
SAML 2.0	SAML 2.0 request signing enables signed authentication requests from the portal to identify security compliance. SAML 2.0 attribute mapping adds more flexibility when integrating identity providers.	✓					
Federate Repositories	A new Federate Repositories setting lets you federate all repositories from another Hub domain.	✓					
Global storage connection assignments for User Groups	Create global storage connections and assign them to the groups of users who require access.	✓	✓	✓			
Workspace storage scopes	Create views (root paths) into connected storage on a per-workspace basis to customize workspace users access to the connected storage.	✓	✓	✓			
Accepted tenants	In a multi-tenant installation, restrict single sign-on requirements to specific tenants.	✓	✓	✓			

Hybrid Workspaces product feature	Feature benefits	Versions					
		24.11	24.7	23.11	23.6	23.3	23.1
Hybrid Workspaces Studio Packager							
Virtual registry key export	Export virtual registry keys to a .reg file.	✓					
Turbo® VM updated	Turbo VM updated to version 24.12.11.	✓					
Capture additions	Capture the public user directory and 32-bit default programs. Capture file and URL associations for all default programs.	✓	✓				
Capture additions	Capture shortcut working directories and Microsoft 365®.	✓	✓	✓			
Turbo VM updated	Turbo VM updated to version 23.12.1.	✓	✓	✓
