Version up. Value up. Accelerate with the latest OpenText AI Operations Management

See the benefits of staying current with OpenText AI Operations Management. Discover how the newest release helps you cut costs, boost resilience, and unlock innovation.

Upgrading to the latest OpenText™ AI Operations Management release gives you more than new features, it maximizes the return on your existing investment. This features list highlights four reasons to upgrade now: maximize ROI through continuous innovation, lower total cost of ownership by eliminating costly workarounds, strengthen resilience with built-in security and risk mitigation, and future-proof your technology by adopting new capabilities as they emerge. By keeping your core platform current, you gain a competitive edge, ensure business continuity, and position your organization for digital transformation.

Use case (Primary)	Feature name	Short description	2025	2024	2023	2022
Administration	**Instrumentation UI**	Simplifies policy deployment and monitoring automation for admins.			23.4	
Agentless monitoring	**SiteScope UI and monitoring**	New HTML5 UI with added monitors, stronger security, OpsB integration.		24.4		
Agentless monitoring	**SiteScope available for OpenShift**	Provides agentless monitoring support across OpenShift environments.			23.4	
Anomaly detection	**Dynamic baseline monitoring**	Automatically adapts baselines to changing conditions for simpler operations.	25.4			
Anomaly detection	**Unified anomaly detection**	Integrated anomaly detection delivers immediate insights from live metrics.	25.4			
APM	**Custom metric exploration**	Collect and explore custom metrics to accelerate MTTR and gain insights.		24.4		
APM	**BPM Open Telemetry integration**	Link BPM with App Observability to reduce MTTR and focus on real use.	25.1			
APM	**New version support**	Continuous browser and technology updates ensure compatibility.	25.2			
APM	**On-premises deployment for AppO**	Deploy Application Observability on premises for local control.	25.2			
APM	**Log exploration**	Centralized log analysis with quick filtering and visual assistance.	25.2			

Use case (Primary)	Feature name	Short description	2025	2024	2023	2022
APM	**OpenTelemetry Collector Content Pack**	Add-on OTel Collector processes and exports telemetry with centralized management.	25.2			
APM	**Embedded synthetic monitoring**	Embedded synthetic monitoring for unified dashboards and consistency.	25.4			
APM	**New CMDB version**	Updated APM stack with latest CMDB and regular patches.		9.6		
APM	**Monitoring Control Center UI (MCC) for SiteScope and Cloud monitoring**	Single console improves APM productivity and efficient workflows.				22.4
APM	**Application Observability**	OpenTelemetry-based observability for end-to-end traces, metrics, logs.		24.2		
Cloud Management	**Hyperscale Observability**	High-performance observability for IaaS/PaaS across AWS, Azure, GCP, K8S, VMware.			23.4	
Deployment	**Operations platform**	Secure journey to cloud with optimized certificates and composable platform.	25.4			
Deployment	**Bring your Own Kubernetes (BYOK), now supporting even more Kubernetes distribution**	Drive ROI by standardizing choice of Kubernetes distribution.				22.4
Event management	**AIOM Express - Private Cloud**	Private-cloud-based event management solution.	25.1			
Event management	**AWS CloudWatch Alarms and Azure Monitor Alerts available as OBM events**	Faster troubleshooting for applications across on-prem and cloud.				22.4
Event management	**Topology sync across OBMs**	Simplified configuration and reduced maintenance across management modules.		24.2		
Event management	**Operations Bridge - SaaS**	Get Operations Bridge performance management with fully hosted solution.				22.4
Event management	**Operations Bridge Manager (OBM) in OPTIC One GUI***	Unified UI visualizations across OpsBridge capabilities.			23.4	
Event management	**Aviator for AIOps**	Faster issue resolution using LLM-powered Aviator.		24.4		
Event management	**RTSM HTML UI**	HTML UI for RTSM administrative tasks.			23.4	

Use case (Primary)	Feature name	Short description	2025	2024	2023	2022
Integrations	**Connector**	Consolidate, correlate, reduce noise, and enable comprehensive third-party reporting.	25.4			
Log monitoring	**Unified log monitoring**	Seamless log exploration across apps, infra, networks with contextual logs.	25.4			
Reporting	**Reporting enhancement**	Role-based access and security governance in Flex Reporting and BYOBI.		24.1		
Reporting	**System performance dashboards**	Quickly build dashboards linked to global CI and causal models.	25.4			
Reporting	**Enhanced third-party integration with metric content for Dynatrace and AppDynamics into the OPTIC Data Lake**	Cross-domain, cross-vendor metric reporting drives faster insights.			23.4	
Reporting	**Flex reports and dashboards using OPTIC One for web-based report creation***	Fast web-based reports and dashboards.				22.4
Reporting	**Metrics collection for third-party tools in Operations Bridge and SaaS**	Normalize and collect third-party metrics for better insight.				22.2
Reporting	**Support for Grafana added to Tableau, Power BI, and Qlik to build your own reports on data in the OPTIC Data Lake**	Build reports from OPTIC Data Lake using familiar BI tools.			23.2	
Security	**Use third-party identity providers for user authentication**	Protect Operations Bridge with user authentication choice.				22.4
Service-level management	**Service-level objectives (SLOs) for unique SLIs that reflect application and infrastructure reliability**	Create, inspect, and act on custom SLOs across applications and infrastructure.			24.4
