

Migrate challenging workloads with ease with an agnostic migration solution

Transform your environment faster while leveraging your Azure commitment

Quickly and easily migrate complex server environments with a solution that offers:

Structured, repeatable migration with near-zero downtime.

- Highly automated process that eliminates common risks and streamlines migrations.
- Reduced data expenses through granular data selection.
- Rapid cutover to your new system, in minutes.
- Maximum recoverability, if needed you can easily revert back to the original source.

Key Migration Customer-Partners

Allocating your remaining Azure commitment can be a daunting task—but it doesn't need to be. Rather than worrying if you have the time or resources to kick off another project before your Azure spend expires, you can commit to effortlessly transforming your environment with OpenText™ Migrate.

When you are ready, it will enable you to migrate any workload, including complex workloads and server data seamlessly into the Azure cloud, with near-zero downtime. Simply put, OpenText Migrate can save you time, money, and resources by consolidating your data into a single location.

OpenText Migrate

OpenText Migrate quickly and easily migrates physical, virtual, and cloud workloads over any distance with minimal risk and near-zero downtime. The streamlined process automates and consolidates numerous steps, which are otherwise manual and prone to human error, into just a few simple tasks. That way, you reduce the amount of work needed to reach your migration goals.

OpenText Migrate includes:

- Automated and orchestrated workflows to cut downtime to minutes.
- Migration between any combination of physical, virtual, and cloud-based platforms to or from any geographic location.
- Scalable, continuous replication, with minimal performance or bandwidth impact.
- Easy, non-disruptive testing and the ability to revert back to the original source if needed.
- Data security with AES 256-bit encryption.

"Typical Migration Timeline"

Our Migration Timeline

Migrate any-to-Azure with ease:

Operating systems:

- Windows Server
- Red Hat Enterprise Linux
- Oracle Enterprise Linux
- SUSE Linux Enterprise
- CentOS
- Ubuntu
- Debian
- Rocky Linux

Any hypervisor, including:

- VMware ESXi and vSphere
- Microsoft Hyper-V/Azure Stack
- Xen
- KVM

Any cloud platform, including:

- Microsoft Azure
- Amazon Web Services (AWS)
- Google Cloud
- VMware vCloud Director

How OpenText Migrate streamlines data migrations

Cutover to your new system in minutes

Cutover automation is available and cutover downtime can take minutes. If reverting to the original system becomes necessary, the execution is straightforward. The process is repeatable and predictable, whether managed through the unified console, automated through scripting, or integrated with third-party tools.

Streamed replication from anywhere to anywhere

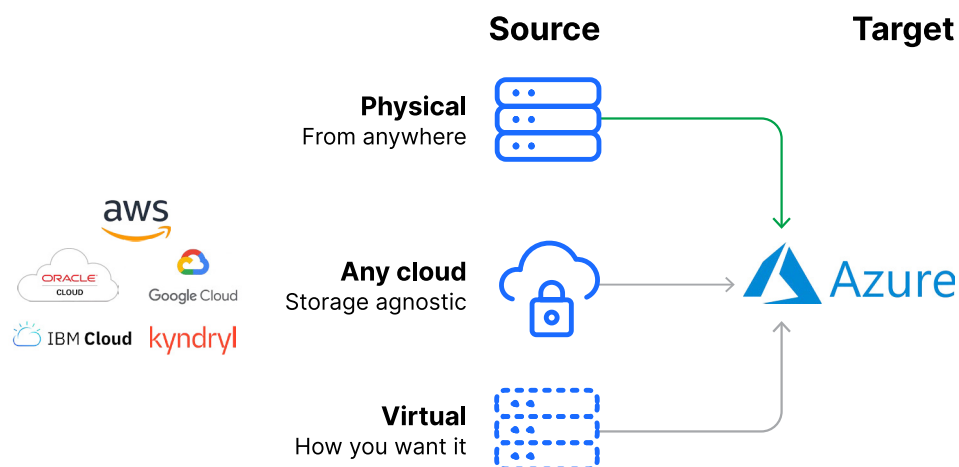

OpenText Migrate replicates the source system to the target, using AES 256-bit encryption to ensure security. Our replication maximizes bandwidth efficiency, sending only the data changes, incorporating multiple levels of compression, and enabling bandwidth throttling. End users can continue working on the source system until the final cutover.

Validate and test cutovers for the target server at any time without disrupting production systems and business operations.

Centralized administration

OpenText Migrate orchestrates your migrations, regardless of source or target, from the initial discovery of your systems to provisioning target VMs and ultimately cutting over.

Our solution uses real-time, byte-level replication to create a replica of the data, applications, database, or complete server being migrated. The replica is kept in sync, mirroring changes such as permissions, attributes, file names, deletions, and encryption settings. OpenText Migrate includes:
