

AppSec trends you can't ignore

AI, APIs, and open source have redrawn the attack surface. Breaches, bots, and new compliance rules are raising the stakes exponentially. Here is your at-a-glance guide to shifts, threats, and fixes.

1

AI: Copilots & criminals

AI now powers both builders and breakers. Teams embed GenAI in apps while adversaries automate discovery and exploits in an arms race in your SDLC.

33%

use GenAI in production

61%

use AI/ML for threat detection

2

Supply chain reality check

Modern apps are built, not written. Open source is everywhere and often outdated, making SBOMs and rapid patching non-negotiable.

97%

of apps contain OSS

86%

had OSS vulnerabilities

91%

used outdated components

3

API tsunami

APIs outpace web pages and attacks follow the data. Auth gaps and logic flaws drive incidents while testing maturity lags.

95%

reported API issues

23%

had an API breach

API volume up

167% YoY

~7.5%

have mature API testing

4

Cloud, configurations & known flaws

Misconfigs, leaked secrets, and unpatched CVEs keep paying off for attackers. Speed is great until it ships risk.

26,447

vulnerabilities disclosed last year

~60%

of breaches tied to known, unpatched flaws

5

DevSecOps gets real (and consolidated)

Developers now drive tool choices and want speed, accuracy, and integration. Many organizations move from point tools to platforms to cut noise.

43%

plan tool consolidation in 2025
