

The next generation of information management is here

Unify data, people, processes, and services to drive results

OpenText
business clouds

Traditional
ERP/CRM
platforms

Unified, secure
information
management
for the digital
workforce

Four ways to unify

Information—

a central nervous system for all enterprise data

- Interoperable business suites
- A single source of truth across all information types and multicloud

Service management—

visibility and observability across corporate services

- Transparency across all corporate functions
- Timely insights and actions improve service delivery

Process automation with AI—

intelligent, contextual, and adaptive

- Agentic-driven
- Distributed throughout the workforce

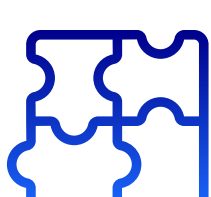

Security—

digital identities that are portable, verifiable, and protected

- Identity and access, permissions, and roles for people and agents
- Encryption, tokens, quantum algorithms for data
- Threat detection, response, rapid remediation

The result:
Digital knowledge workers turn information into automated action

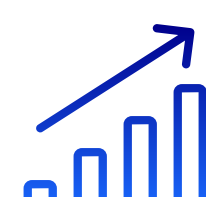

The next generation of information management can:

Replace data
fragmentation
with unity

Deliver information
that works for you,
not against you

Drive results
