

# OpenText Core MDR: Enterprise-grade security for MSPs

Enhance your security operations with scalable, co-managed MDR solutions for MSPs processes they need to master modern work

## Benefits

- No hardware or CapEx commitments, ensuring cost-effective scalability
- Automation combined with expert SOC support
- Seamless integration with existing security tools for streamlined operations
- 24/7/365 SOC monitoring and real-time threat detection

MSPs face numerous challenges when it comes to managing cybersecurity for their clients. Limited resources, complex security tools, and the overwhelming volume of threats can lead to ineffective incident response and higher operational risks. OpenText™ Core MDR offers a scalable, co-managed SOC solution to address these challenges without the cost and complexity of building in-house capabilities.

## Why OpenText Core MDR?

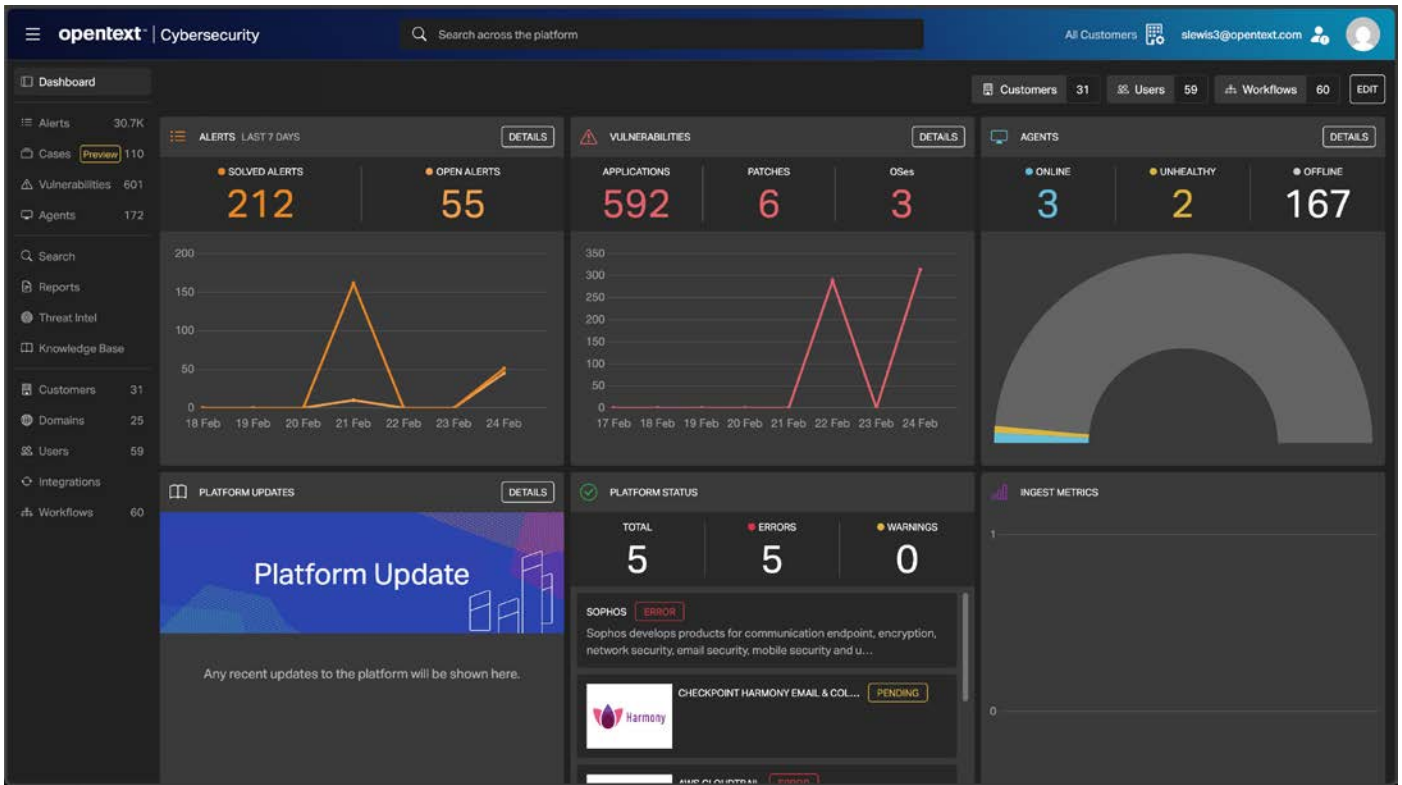

OpenText Core MDR redefines cybersecurity for MSPs, providing enterprise-grade protection through a co-managed SOC-as-a-service model. This comprehensive solution is designed to be scalable and flexible, with no hardware requirements or CapEx commitments. With cutting-edge technology, including integrated SIEM and SOAR, OpenText Core MDR leverages both automation and human expertise to protect your network and endpoints from sophisticated cyber threats.

## Comprehensive security and support

OpenText Core MDR combines advanced threat detection tools with 24/7/365 monitoring by a team of SOC analysts and threat hunters. The platform seamlessly integrates with your existing tools, simplifying your operations while ensuring a robust and cohesive security posture. From onboarding to offboarding, OpenText Core MDR manages security operations efficiently, providing ongoing support and rapid incident response.

## Key features and use cases

- **Unified PSA:** Streamline ticketing and vulnerability management with integrated professional services automation.
- **Enhanced EDR:** Achieve total endpoint protection with real-time threat detection.
- **SIEM and SOAR integration:** Automate threat detection, response, and remediation workflows.
- **Advanced endpoint protection:** Benefit from proactive monitoring and real-time global threat intelligence.
- **Effortless deployment:** Deploy seamlessly with a lightweight, non-intrusive agent-based monitoring solution.
- **Regulatory compliance:** Stay compliant with industry standards like NIST, PCI, and SOC 2.

OpenText Core MDR console

OpenText Core MDR empowers MSPs with a scalable, flexible, and cost-effective cybersecurity solution. By combining automation with expert human oversight, OpenText Core MDR reduces operational burdens, improves incident response times, and provides comprehensive security for your business. With no long-term commitments or hidden fees, OpenText Core MDR is the ideal solution for MSPs looking to enhance their cybersecurity services.
