Storengy improves speed and detail of daily reports

Storengy, a French company based outside of Paris, is a world leader in the design, construction and operation of underground gas storage facilities. It protects critical energy infrastructure in the UK, France and Germany and has started operations in Canada and China.

Working with energy suppliers, utility firms and the government, the business is subject to detailed regulations and regular compliance checks, making operational and strategic reporting a significant part of Storengy's business process.

"We use more than 150 reports every day," said Pierre Dudit, transverse performance engineer, Storengy. "Up to 80 percent of our time has been spent preparing the data, but only 20 percent on the actual analysis."

Storengy wanted to greatly improve this ratio by streamlining the production of reports and improving the report's granularity through links to established industry data sources.

By replacing its aging reporting tool with OpenText™ Information Hub (iHub), a component of the OpenText™ Analytics Suite, Storengy was able to transform the speed and detail of its reporting. OpenText iHub enabled the team to design, deploy and manage secure, interactive web applications, reports and dashboards fed by multiple data sources.

"The real value of OpenText iHub is the time it saves. It enabled us to create reports in just seconds," said Dudit. "This gives us more time to analyze the data."

Today, Storengy has 300 iHub users, including sales staff, engineers, field operatives and quality managers. It generates daily storage updates for the national energy authorities and daily reports on individual site operations. Users can access and work with the data as required. Dynamic reporting ensures the business is more compliant, transparent and efficient.

The OpenText solution enabled Storengy to roll out to new users, quickly and simply. ***"We looked at several market solutions before opting for OpenText iHub," said Dudit. "We appreciated the ease of implementation. We recognized this would make it easier to scale when required."***

The transformative impact of iHub has encouraged Storengy to explore greater uses for its data.

The company is also working with OpenText Professional Services on a project named Mashup, with the aim of developing public-facing reports.

"With Mashup, we want to create a simplified dashboard showing operational updates from across the group," said Dudit. "We plan to display this information in office reception or coffee areas. This kind of up-to-the-minute reporting will allow us to better communicate company performance."

"We looked at several market solutions before opting for OpenText iHub. We appreciated the ease of implementation. We recognized this would make it easier to scale when required."
