opentext™

Product overview

OpenText Documentum D2 Mobile

Get secure mobile access to OpenText Documentum D2 to view and interact with content, regardless of location

Work from any iOS or Android™ device

Maintain permission controls and security policies

Employees are relying on mobile more than ever, often performing key tasks and making critical decisions on the go, away from their desks. Problems arise when information is stored in an enterprise content management (ECM) system out of reach to users working remotely.

OpenText™ Documentum™ D2 Mobile has a simple, intuitive interface that allows users to access and securely browse their content in OpenText™ Documentum™ D2 anytime and anywhere. Users can also perform common tasks, including searching, previewing and downloading content for offline access.

Work from any iOS or Android device

People typically work across multiple devices during their work day and need to switch between screen size and operating systems to view and work on content, no matter where they are. The Documentum D2 Mobile app keeps the familiar styling and experience of the Documentum D2 Smart View, optimized to expose the most commonly used features in an intuitive manner. Favorites and Recently Accessed documents are shown on the home screen to give users faster access to the information they need. The same tiles, icons and colors from the Smart View desktop are re-created on the mobile app home screen, enabling users to switch seamlessly between devices when working across PCs, tablets and smartphones, whether iOS or Android™. The URL links to content in Documentum D2 can be shared by email, as the URL links are the same on smartphones and desktops.
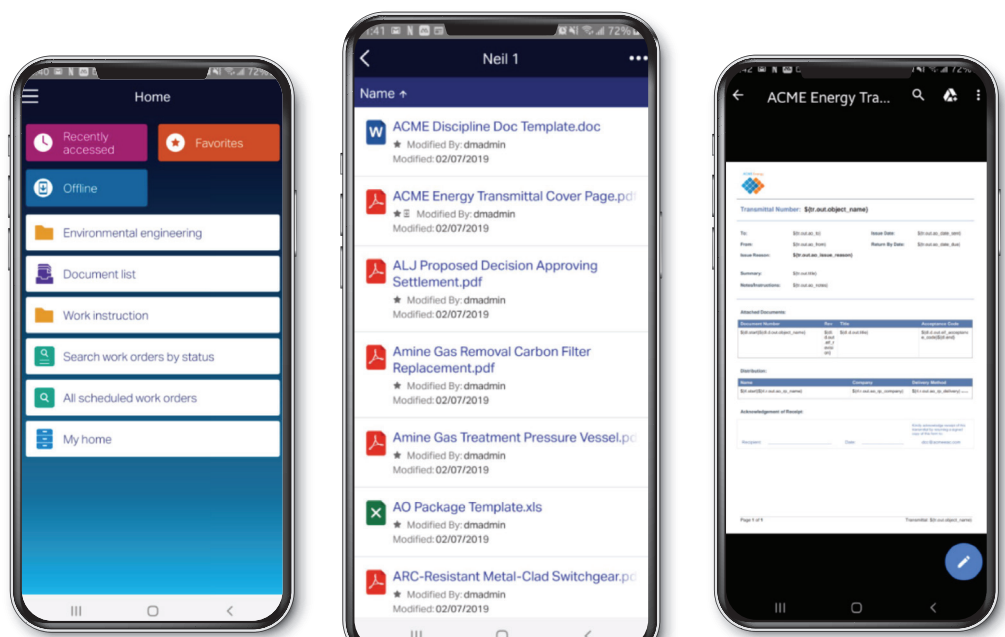

opentext™

Maintain permission controls and security policies

All user access rights and settings are automatically replicated on D2 Mobile without any additional set-up or configuration. IT administrators can also control user access and content via the secure OpenText™ AppWorks™ Gateway, which provides a full audit trail of mobile activity. Administrators can search for any user on the system and see connection times and the types of devices being used to connect to the server. They can even issue a wipe command to remove any information within the Documentum D2 Mobile application but leave all other applications intact.

Documentum D2 Mobile is free for new and existing customers with Documentum D2 version 16.7 or above. Contact your account manager to learn more.
