OpenText Exstream Communications Designer

The fast and easy way to design dynamic and compliant client communications from scratch, in a modern, web-based environment

Increasingly, business users and content creators must create customized and flexible communications that are not limited by templates or controlled editing frames or areas. And, with so many marketing and business users regularly sending client communications, organizations are looking for customer communications management (CCM) options that do not require IT resources for layout and design or content updates.

OpenText™ Exstream™ Communications Designer enables less-technical users to design responsive customer communications, including HTML5 email, for a variety of screen sizes and device types, without help from IT.

Communications Designer is a browser-based designer for full template design and layout creation, enabling marketing and other content creators to design customized OpenText™ Exstream™ communications from scratch or from an existing template using a simple drag and drop interface. Content creators can quickly and easily deploy new communications and release changes to existing communications without requiring IT assistance. With its web-based, thin-client design, onboarding new users is easy. Organizations simply need to grant access to the new user’s account and provide a connection URL.
Use cases

Marketing templates
With OpenText™ Exstream™ Communications Designer, marketing professionals can build new layouts and templates when the content is ready and the time is right, without waiting for IT support or jeopardizing timelines.

Customized correspondence
An insurance company that uses OpenText™ Exstream™ to create renewal letters can now enhance those letters with more customized messages. For example, an agent can use Communications Designer to design a new communication about estate planning for clients who recently turned 50 and send it to hundreds of customers without waiting on IT to develop the template.

Content Author integration
Portions of Communications Designer templates can be designated as “controlled authoring areas,” allowing other content creators to update or modify content using the Exstream Content Author interface.

Realtime opportunities
A communication professional can find and address realtime customer issues. In the utilities industry, this could mean creating a new communication with customized money-saving tips for customers who are repeatedly charged extra for peak-hour energy consumption.

Leverage flexible deployments
Communications Designer enables organizations to easily move template design to content creators and remote workers by extending intuitive design capabilities through a browser-based user interface to the cloud. Deploying CCM cloud options also keeps the IT footprint down.

Enable flexible, self-service communication design and layout creation for business users
Creating ultra-personalized communications at the right time, in the right format and for the right device can be challenging when faced with inflexible templates. Communications Designer allows non-technical marketing and business users to create, build and lay out customized communications from scratch, including designing HTML5 content for delivery to mobile applications or web portals.

New support for HTML5 web content allows users to optimize communication design for mobile and desktop applications. Users can easily toggle between desktop and mobile views to see how content changes impact the design and how the final communication will look to the customer. This enables the creation of targeted content optimized for the delivery channel.

Design responsive HTML emails

Communications Designer makes it easy to create responsive emails, designed and optimized for viewing on an individual customer’s device to get the best results. Intuitive HTML email designs are responsive by default and significantly reduce the number of steps required to create a communication. Users can adjust templates at will, easily create or modify a communication with drag and drop capabilities, resize frames and areas on the fly and use the built-in simulation feature to preview and test communications before sending them out.

Deployment options

Exstream Communications Designer is available as part of the Exstream Platform and as a containerized version with Exstream CE.

Why OpenText?

Exstream is OpenText’s strategic, innovative and continually evolving CCM platform. The solution extends organizational CCM capabilities to include business user-driven content creation and modification, a premier batch engine that is faster than other CCM solutions and the ability to ingest data in any format, greatly reducing document processing time.

Exstream is the No. 1 CCM solution in market share and enterprise deployments.

Exstream is part of the OpenText™ Experience Suite Platform, which includes solutions for digital asset management, web content management and more to provide a complete, 360-degree customer experience across all interaction points of the customer journey. The Experience Suite Platform enables organizations to improve customer loyalty and create connected, engaging, personalized experiences that yield better, longer-lasting results related to customer lifetime value (CLV).

Exstream differentiators include:

• Premier batch engine performance with less investment in infrastructure and software licenses.
• Easy integration with data and content from any application, with no need to normalize data, saves hours of processing time.
• Strongest integration with business apps and ecosystems, such as SAP Salesforce and OpenText EIM solutions.
• Design and authoring functionality that lets non-technical users modify and publish content in Exstream templates, without IT help.

* based on 2018 Fortune 500 lists and includes all OpenText CCM solutions
### New Exstream Communication Designer features:

<table>
<thead>
<tr>
<th>Feature</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Zero-install, thin-client design</td>
<td>Content creators can quickly and easily access Communications Designer on the web without downloading anything or requiring IT support.</td>
</tr>
<tr>
<td>Full template design and layout</td>
<td>Flexible design functionality includes automated tables and flowing documents that dynamically adjust to create an optimal user experience.</td>
</tr>
<tr>
<td>Responsive HTML email design</td>
<td>Responsive design templates, drag and drop support for template adjustments and simulation support for preview and testing enable content creators to easily build communications that focus on user experience.</td>
</tr>
<tr>
<td>Re-usable components and omni-channel delivery</td>
<td>Save time by leveraging re-usable text, tables and image components for omnichannel communications delivery.</td>
</tr>
<tr>
<td>Reduced package file dependency</td>
<td>Deploy communications quickly without package file dependency.</td>
</tr>
<tr>
<td>“Born digital” design</td>
<td>Digital design features, such as responsive templates, drag and drop functionality and preview simulation support, make it simple to design communications for any channel.</td>
</tr>
<tr>
<td>Share design objects across email and page designs</td>
<td>Linked, reusable design components allow for one unified message to be delivered to any device without compromising on-page design layouts.</td>
</tr>
<tr>
<td>Design for Content Author</td>
<td>Full design template creation with frame support controls authoring areas within a communication, yet gives content creators more design flexibility than ever.</td>
</tr>
<tr>
<td>Mobile view editing and simulation</td>
<td>Drop in and preview content for mobile and desktop screens.</td>
</tr>
</tbody>
</table>
