

OpenText Smart Migration FasTrak

Your FasTrak to savings

Organizations often struggle with the technological challenges of handling a complex array of corporate and departmental data sources, including relational databases, content repositories, email stores, and file servers.

OpenText Smart Migration FasTrak service allows organizations to not only analyze, retrieve, and move the content from a source to a target, but to significantly enrich the content using OpenText contextual analytics, text mining, and semantic technology.

Smart Migration FasTrak provides new inferred knowledge to increase the value of your data—including enhanced search capabilities, record management policies, compliance practices, and archive programs in an OpenText solution. Smart Migration FasTrak includes:

- Discovering, analyzing, and validating data quality
- Preparing content for migration
- Enriching the metadata by mining the details about the content
- Transforming the data
- Mapping the metadata to the target descriptors
- Executing the migration and decommissioning the legacy system

Smart Migration FasTrak service is the most efficient path to realizing your return on investment (ROI) through our best practices approach to implement a pre-defined solution. Having migrated and decommissioned hundreds of applications, OpenText Professional Services is uniquely positioned to implement this solution.

As the premier services organization for successfully implementing and realizing OpenText solutions, OpenText Professional Services offers the Smart Migration FasTrak services package to accelerate your organization's time to value.

BENEFITS

- *Increase the value of your data through enhanced search capabilities, record management policies, compliance practices, and archive programs*
- *Realize your return on investment through a best practice implementation*
- *Accelerate time to value with the premier services organization for successfully implementing OpenText solutions*

Beyond FasTrak

While the FasTrak package is designed on best practices and will fit most customers' foundational requirements, there are situations when additional services may be required. The OpenText Professional Services team is ready to assist with expanded requirements to accommodate your organization's need for:

- Application portfolio analysis of multiple legacy systems
- Data encryption and masking
- Data analysis, design, and archive from multiple legacy systems

OpenText Professional Services is best positioned to deliver our smart data migration solution to your migration and decommissioning initiative and is committed to your success.
