

# END-TO-END

eDiscovery with Carbonite® Endpoint

Modernize your decentralized, one-off approach to managing eDiscovery with **OpenText™ End-to-End eDiscovery.**

As a unified system, it delivers technology and workflows to support all phases of the eDiscovery process.

## Streamline operations

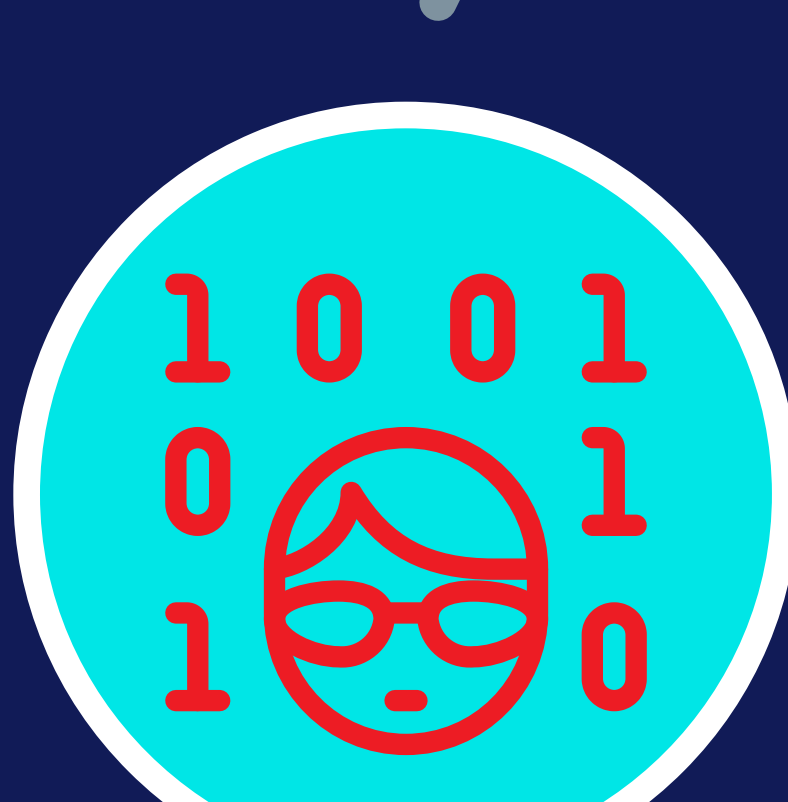

Get rapid access to potentially relevant data, ensure data preservation and enable seamless uploads to review platforms with **OpenText™ End-to-End eDiscovery.**

- Carbonite® Endpoint** expands the breadth of data that can be collected to encompass critical data on endpoints (laptops and desktops).
- Carbonite Endpoint integrates with **OpenText™ Legal Hold** to enforce data preservation, while Legal Hold automates legal hold notification and tracking.
- Data can be uploaded to **OpenText™ Accelerate** and/or **OpenText™ Insight** for processing, analysis, review, and production.

## Mitigate risk

Secure privileged and confidential information with **multi-faceted defense** at the infrastructure, application and network layers.

Protect sensitive data with backup/restore capabilities to **safeguard against data loss.**

## Control costs

Replace disparate technology, processes, vendor contracts and project management with a **unified system, provided by a single vendor.**

OpenText End-to-End eDiscovery provides transparent costs with **cloud-based solutions** and subscription-based pricing.

**Centralized and standardized** eDiscovery processes provide greater efficiency for lower effort and cost.
