

OpenText™ Life Sciences Express

Simple, role-based access to information anytime, anywhere, on any device

Life Sciences companies have made enormous strides in improving efficiency—an imperative, given the many pressures inherent in the industry today. Key to boosting efficiency is streamlining processes and helping people be more productive by accomplishing their tasks more quickly. Your executives, employees and partners expect to be able to function outside the office and get their tasks done quickly, anytime and anywhere, on any device. But obstacles get in the way: namely, cumbersome interfaces, VPN security requirements and compliance risks created by working outside the system of record for review and approval.

Users shouldn't be stymied by inconvenient log-in procedures or poorly designed interfaces. They shouldn't have to navigate through complex folder structures searching for content or trying to figure out how to get simple tasks done. And a one-size-fits-all user experience, even if simple, still falls short when it isn't tailored to the user's role to show only what is truly pertinent to getting the job done quickly and efficiently.

Productivity improvements with a tailored interface

OpenText has solved this challenge with Life Sciences Express. An extension to OpenText Documentum for Life Sciences, Life Sciences Express is a responsively designed interface that provides a consumer-like, streamlined, intuitive experience. And best of all, it is role-based, providing only tasks and content relevant to the user. Now, users can review and approve documents on the go, without compromising security or compliance.

Tailored to each user, the interface enables multifaceted search and provides personalized collections of documents and easy task management. With no formal training, casual users, as well as external partners can get started on their laptop, tablet or phone, with only a browser and internet connection. They no longer have to waste time logging into the system via VPN to complete tasks within the system of record. And external partners can securely access content, approve documents and participate in workflows, dramatically streamlining processes and reducing errors and unnecessary rework.

SUMMARY

OpenText™ Life Sciences Express offers an intuitive, role-based user experience for managing information and tasks anywhere, anytime, on any device—laptop, tablet or phone—without compromising security or compliance. An extension to OpenText™ Documentum™ for Life Sciences, this lightweight application is built on the cloud-native LEAP platform, enabling multi-faceted search, personalized collections of documents and easy task management.

Full compliance by connecting to Documentum

Life Sciences Express is a lightweight application provisioned via the cloud-native LEAP platform, OpenText's next-generation Enterprise Content Management solution. The platform connects to your Documentum for Life Sciences solution for immediate boosts in productivity and efficiency. It also assures compliance, capturing controlled processes in the audit trail, generating 21 CFR Part 11-compliant electronic signatures and ensuring a single authoritative source for regulated content.

Life Sciences Express in action

During clinical trials: Users need easy access to time-sensitive activities. With Life Sciences Express, they can eliminate difficulties in connecting to VPN and understanding how to complete tasks, which cause delays in reviewing and approving of clinical documents. This can speed up submissions to the Institutional Review Board for approval, resulting in an earlier start date for the trial.

During regulatory submissions: Users need easy access to submission-relevant content. With Life Sciences Express, they can speed submission preparation by navigating submission-like virtual structures or organizing documents in collections for findability and effective review and approvals. The results are faster agency approval, reduced time to market and competitive advantage. With easy access to the system of record, organizations can also reduce delays in the review and approval of agency communications, eliminating time-consuming work and improving consistency and accuracy.

During the quality assurance process: Users need to easily access, review and approve procedural documentation. With Life Sciences Express, they can approve documents faster and distribute and access relevant documents to ensure quality and eliminate compliance risk.

Get started today

With Life Sciences Express, you are taking the next step toward digital transformation and the productivity improvements you need to thrive in today's hyper-competitive environment. To learn more, visit us at www.opentext.com.
