OpenText Document Co-Authoring by ActiveWrite

OpenText™ Document Co-Authoring by ActiveWrite is a revolutionary document creation system that enables users to truly see who did what, where and when. This solution is focused around creating and managing content collaboratively, enabling multiple users to work on the same document and access different parts of the document with different permission levels, all in the same document.

Document Co-Authoring by ActiveWrite opens a whole new world of content control; dynamic content reuse, fluid editing and collaboration and content creation in ways that have never been possible.

Partner overview

The ActiveWrite solution is focused purely on content creation and collaboration. A unique system born out of the frustration of dealing with the limited collaborative abilities of traditional document editing tools.

Product overview

Document Co-Authoring by ActiveWrite has an easy to understand editing history, change control and intuitive understanding of changes within a document. It enables users to rapidly edit or perform redline editing with multiple users at the same time.

Users can easily share sections of a document, or control access to content within a document, not just at the file level but within the document itself. Need to make content in a document confidential? Simply do a find and redact.

Users can easily reuse content across thousands of documents. For example, if a user updates a policy statement, it will be instantly updated across thousands of documents that used that content. Because content can be controlled and manipulated within a document, auto-updating of templates is also possible—update the template with a new telephone number or logo and all documents that use that template get automatically update. Changing one, changes them all.

Product highlights

- Multiple users can edit a document at the same time, see each other's editing activity, compare edits and make comments on edits and within the document.
- Need to figure out who collaborated the most? All the activity is tracked and can be summarized and analyzed right down to the last edit.
- There is only ever one version of a co-authored document. Never mistakenly edit the wrong document again.
- Having only one version of the document makes controlling security easy, allowing users to secure the actual content in the ActiveWrite document, not just the files containing the content.
- To make content in a document confidential, simply do a find and redact.

Users can see a document at any point in time, from the first edit to the last, with no need for file versioning. If a user needs a current version, they can simply take a snapshot.

Value proposition

- No matter how many users there are or edits performed, there is always one document with assigned and controlled access by multiple contributors.
- Users can assign roles and responsibilities by chapter, section or content selection within a document.
- Multiple users can update a document simultaneously.
- Users are assigned specific roles; editor, reviewer, reader, approver.
- Email updates are sent to users if content is changed or any assignments are changed.
- Content reused by multiple documents can be easily updated and will update the documents using that content.
- All editing activity and content creation is audited, including redlining, deletion of content, as well as any redaction performed.

Key integrations

- OpenText™ Content Suite Platform

OpenText Module Suite for Content Suite Platform by AnswerModules

OpenText™ Module Suite for Content Suite Platform is a fully integrated set of add-on modules that provide the tools necessary to rapidly deliver tailored solutions and applications on top of the standard Content Suite and OpenText™ Extended ECM platforms. Module Suite extends the capabilities of Content Suite and Extended ECM in key areas, such as forms, external integrations, workflows, intelligent automation and Smart View, as well as overall user experience. For Content Suite Platform Cloud Edition customers, this certified add-on will allow them to build tailored solutions securely and with extreme flexibility in an otherwise closed environment

Partner overview

AnswerModules is an OpenText Solution Extension Provider. As a product-oriented company focused on delivering innovative add-on technologies, AnswerModules is dedicated to extending and enhancing OpenText Content Suite and Extended ECM platforms' capabilities. AnswerModules was the first ISP able to integrate its solution with Smart View, as well as the first member of the SolEx program whose solutions were certified to be deployed in the OpenText Cloud. Answer Modules was awarded the 2019 EMEA Innovation/Technology Award.

Product overview

This solution enables businesses to rapidly define and deploy focused applications, tailored processes and new business scenarios within their Content Suite Platform and Extended ECM Platform. Its highly efficient approach, coupled with the possibility of adopting an agile methodology, reduces the time and cost associated with developing and maintaining solutions. Its simple low-coding interface enables non-technical users to create and maintain complex applications, while a modern scripting language allows developers to implement advanced scenarios without the need to know OScript or any other proprietary language.

Product highlights

- Introduce intelligent automation to improve business users' productivity and overall UX
- Readily interchange data and services with third-party platforms or applications
- Streamline workflows and extend the capabilities of the standard workflow engine
- Tailor and simplify the UI to meet specific business needs
- Seamlessly integrate with the DocuSign platform

Value proposition

- Safeguard and extend investments made on Content Suite and Extended ECM platforms
- Ensure that developers are productive within hours with low-coding, standard language and agile methodology
- Increase user satisfaction and productivity with automated actions, fewer clicks and streamlined interfaces

Key integrations

- OpenText Content Suite Platform
- DocuSign® Signature Platform
- OpenText Content Suite Platform Cloud Edition
- OpenText Extended ECM Platform

OpenText Beautiful WebForms for Content Suite Platform by AnswerModules

Forms are an integral part of virtually every corporate process in OpenText™ Content Suite, however they are normally limited to being used to collect information in a convenient manner. OpenText™ Beautiful WebForms for Content Suite Platforms by AnswerModules, transforms forms into much more. Forms are no longer limited to gathering data, they can now act upon that data in intelligent and automated ways.

Partner overview

AnswerModules is an OpenText CS Solution Extension Provider. AnswerModules is a product-oriented company focused on delivering innovative add-on solutions dedicated to extending and enhancing OpenText Content Suite Platform’s capabilities.

Product overview

Beautiful WebForms for Content Suite Platform enhances the existing form framework to make forms capable of more than simple data input. Forms crafted with Beautiful WebForms for Content Suite Platform can be used as the front end for almost any purpose, including document and content manipulation, interactive dashboards, automation of mundane tasks, etc.

Beautiful WebForms for Content Suite Platform also introduces enhancements to a form’s functionality by adding dynamic fields, external integrations, strong validations, responsive layouts and much more. Furthermore, the tools contained within Beautiful WebForms for Content Suite Platform drastically simplify efforts and reduce the time required to build professional grade forms, even by non-technical users.

Product highlights

- Dynamically display form fields
- Integrate external data sources within a form
- Deliver forms to users outside of Content Server
- Robust client and server-side validations
- 100% responsive, design once for any device
- Intuitive visual drag-and-drop form builder
- Extensive library of ready to use widgets that cover various requirements

Value proposition

- Develop forms for any scenario, form-based process or as an application’s front-end UI
- Deliver powerful and ergonomic forms that are aligned with end-user expectations
- Allow even non-technical users to create and manage their forms
- Surface forms in the SmartUI as Tiles

Key integrations

- OpenText Content Suite Platform

OpenText Document Linking for Content Server by Cad-Capture

OpenText™ Document Linking for Content Server by Cad-Capture makes asset centric navigation a reality. This allows the user to locate and retrieve drawings, documents and data related to the asset from any system (e.g. ERP, Asset Management or other ECMs). An integral part of this solution is the OpenText™ Brava!™ viewer, which facilitates the document linking.

The identification and classification of assets is automated based on pattern recognition, enabling users to retrieve the information they need with a single click of a button—whether from other documents in OpenText™ Content Server, information from SAP or from any other accessible systems.

Partner overview

Cad-Capture has been an OpenText Solution Extension Partner since 2005, with products on the OpenText price list since 2010. Based in the UK, Cad-Capture was founded in 1991 and is an expert in the capture, control and collaboration of documents and data.

Product overview

By turning drawings and documents into an interactive dashboard, OpenText Document Linking for Content Server by Cad-Capture takes the time and effort out of navigating through multiple systems, drawings and documents. With some bespoke features leading to great success in the Oil and Gas industry, the OpenText Document Linking for Content Server by Cad-Capture product has been developed with highly regulated and complex use cases in mind.

Product highlights

- Automatic highlighting and hyper-linking of drawings and documents
- No changes required to the content-searchable files
- Compile and validate asset master lists
- Greater adoption of metadata, using Content Server categories and attributes to improve searching capabilities
- Parse through searchable text in drawings and documents, automatically applying HotSpots to the key assets
- Automatic population of categories and attributes in Content Server

Value proposition

- Improve end-user adoption of products, such as Content Server and Brava!
- Save valuable time in navigating around multiple systems
- Increase safety standards and improve legislative compliance

Key integrations

- OpenText Content Server 16.2+
- OpenText Brava! for Content Suite 16.2+
- OpenText Brava! for Content Suite HTML5 support from Q2 2019 – v16.6+
- OpenText™ Extended ECM for SAP® Solutions

OpenText Translator for Content Suite Platform by Cassia

For any customer that deals with multiple languages via documents or users, OpenText™ Translator for Content Suite Platform by Cassia takes OpenText™ Content Server’s multilingual features to the next level by incorporating multilingual attributes, enterprise menu items, assisted search, system messages, news items, translation preview and much more.

Partner overview

As an OpenText Solution Extension Technology member, Cassia Content Management is a software development company that focuses on enhancing the feature set of the OpenText™ Content Suite of applications. Its success is due to providing modular solutions that allow customers to extend or add new Content Server features, streamline their business processes, facilitate user adoption and maximize their return on investment in OpenText’s Content Server software.

Product overview

Translator for Content Suite Platform by Cassia enhances the multilingual capabilities of Content Server. Not only can attribute names and values, LiveReport fields and other items be presented in the users’ language of choice but users can also leverage third-party APIs to find and read assets in other languages. Rigor is maintained through a combination of a corporate lexicon and reporting available to the Knowledge Manager. Translator for Content Suite Platform is also backwards-compatible, helping ensure that any existing products/integrations continue working seamlessly.

Product highlights

- Multilingual metadata provides greater adoption of facets, columns, adding content and integrations
- Translation-assisted search expands the search and collaborative capability of Content Server
- Content previewer feature empowers users to understand all content; not just content in their own language
- Multilingual reports are consolidated into a single global view in the user’s language
- Multilingual workflow provides instructions, attributes, step names, etc. in the user’s language

Value proposition

- Expanded user self-serve
- Find assets with content or metadata in other languages
- Preview documents in language of choice
- Improved user search and collaboration
- Increases user independence to find and preview information
- Leverages automatic translations on search queries

Key integrations

- OpenText Content Server
- OpenText Content Suite Platform
- OpenText™ Content Server Mobile

OpenText Extended ECM Enabler for Microsoft Dynamics Customer Engagement by Contesto

Connected workspaces enrich business process flows, facilitate efficient collaboration and enable seamless customer engagement by ensuring that customer-facing teams have 360-degree insight into business data and a single source of truth for customer information. OpenText™ Extended ECM Enabler for Microsoft Dynamics® Customer Engagement by Contesto integrates OpenText Content Services with Microsoft Dynamics 365, securely and seamlessly delivering content and realtime data to Microsoft Dynamics and Microsoft Teams workspaces.

Partner overview

With more than 17 years of experience as an OpenText partner, Contesto delivers best-in-class solutions for OpenText Content Services to global organizations. Contesto helps clients integrate their leading business applications, including OpenText and Microsoft®, connecting business workspaces, increasing process efficiency and delivering sustainable value for their IT investments.

Product overview

Extended ECM Enabler for Microsoft Dynamics Customer Engagement by Contesto provides the critical connection between business processes and Microsoft Dynamics, delivering a complete set of content services to enrich sales, marketing, customer service and field services business processes. At the center of the integration is the OpenText Extended ECM Business Workspace, connecting content to Microsoft Dynamics 365 business process flows and Microsoft Teams. Users can view, edit and share customer content, including contracts, work orders, diagrams, field and case reports, residing in the OpenText™ Content Suite Platform without ever leaving their Dynamics 365 or Teams applications. Role-based permissions, security protocols and access rights are centrally managed to ensure authorized users can always access the specific information they need. New or updated content is instantly available and easily accessible, facilitating team collaboration when working on customer requests, field site visits or client proposals. Because customer documents, data and content surface directly in the corresponding Dynamics 365 customer record or Teams collaboration space, users do not need to switch business applications to find a document or submit a request for information due to lack of system access. By integrating systems, streamlining access to content and surfacing actionable, realtime data, OpenText™ Connected Workspaces enable organizations to reimagine team collaboration, capitalize quickly on opportunities to boost revenue and drive higher-value customer engagement.

Product highlights

- Surface content from Content Suite directly in Dynamics 365 or Teams
- Access information relevant to selected business objects (e.g. content, transactions, client data)
- View and manage content from ERP, ECM or PLM applications without requiring full access rights or multiple user licenses
- Apply context, rules and permissions in realtime to new or updated content
- Manage role-based permissions, security protocols and access rights through a unified, central structure
- Operate in Microsoft® Azure® and deployed either in the cloud or on-premises

Value proposition

- Accelerate sales cycle by surfacing realtime data and siloed content into Dynamics 365 and Teams
- Improve customer case problem-to-resolution and field service outcomes
- Drive improved productivity and collaboration with connected workflows
- Gain 360-degree insight and maximize value from both unstructured and structured content
- Support corporate data retention policies
- Maintain security and control over enterprise information
- Maximize ROI from existing and new IT investments

Key integrations

- OpenText Extended ECM Platform
- Microsoft Dynamics 365 Customer Engagement

OpenText RFX Center for Content Suite Platform by Counterpoint

OpenText™ RFX Center for Content Suite Platform by Counterpoint manages and monitors RFI, RFQ, RFP and other procurement processes. It leverages OpenText™ AppWorks™, OpenText™ Content Suite Platform and OpenText™ Analytics Suite to bring efficiency, transparency and compliance to purchasing organizations.

Partner overview

Counterpoint, an OpenText Solution Extension Provider and OpenText Services Partner, is a leading provider of services and solutions for the AppWorks platform in North America.

Product overview

RFX Center by Counterpoint is a solution targeted at automating and improving the efficiency of bid management—creating, advertising, distributing, evaluating and awarding opportunities. It enables organizations to streamline their competitive procurement processes, monitor spend, manage vendors and automate the flow and capture of procurement information at the enterprise level. Automating the workflows used in competitive procurements, including RFPs, RFQs, RFIs, and framework agreements, RFX Center for Content Suite Platform by Counterpoint facilitates the efficient flow of work, while enabling the capture of key performance indicators and process metrics. The powerful analytical capabilities within RFX Center provide decision makers and management with realtime visibility into procurement operations and enables sound strategic decisions.

Product highlights

- Online bid management
- Vendor management and self service
- Low-code configurable procurement methods
- Low-code configurable forms
- Automated bid and contract document generation
- Industry-leading analytics

Value proposition

- Automate RFP, RFQ, RFI, Framework and sole source processes
- Leverage configurable procurement policies based on industry best practices
- Enforce regulatory compliance via procurement process automation, standardization and audit trails
- Manage procurement documents in a secure, centralized content repository
- Empower business users to rapidly configure workflows and business rules with an intuitive, easy to use interface, no coding required
- Improve efficiencies and integrity for all vendor and buyer interactions using a single, central portal—no more emailing documents

Key integrations

- OpenText AppWorks/OpenText™ Process Suite
- OpenText Content Suite Platform
- OpenText™ Directory Services
- OpenText™ Magellan™ BI & Reporting

OpenText Permissions Manager for Content Suite Platform by Fastman

OpenText™ Permissions Manager for Content Suite Platform by Fastman is the most complete permissions and information access management solution for OpenText™ Content Suite Platform, simplifying the management of access controls, reducing the risk of information leaks and enabling sound internal information controls.

Partner overview

Fastman is an OpenText authorized Technology Partner and authorized Services Partner. After more than 12 years of working together, OpenText and Fastman have more than 110 mutual clients around the globe.

Product overview

Permissions Manager for Content Suite Platform by Fastman is the leading product for viewing, managing and controlling access rights within OpenText™ Content Server and OpenText™ Extended ECM Platform. It is used by organizations around the globe to lower deployment and operational costs, reduce risk and ensure stronger compliance to policy and legislation. Permissions Manager for Content Suite Platform by Fastman is the most complete permissions management solution for Content Server. No other product provides the range or depth of functionality provided by Permissions Manager and Permissions Manager for Microsoft® Outlook®.

Product highlights

- Fully integrated Content Suite module, compatible with all versions from 9.7.1 through to 16.2
- Dashboard-driven interface for both smart and classic UIs
- View, change and replace one or all permissions on one, selected or many items, regardless of location in Content Suite Platform
- Find, replace and remove users' access to items based on applied permissions and/or security clearance settings
- Roll back and undo permissions changes made by object type, time, location and type of access, regardless of when those changes were made
- Compatible with and supports OpenText™ Brava!™ permission settings
- Enable read-only access to all viewing functions, including effective permissions, to all or selected content

Value proposition

- Permissions are a fundamental building block of Content Suite Platform, with access to all content and most functionality controlled by permissions. How these permissions are designed and managed is critical to the value customers get from Content Suite.
- Permissions Manager for Content Suite Platform by Fastman provides customers with the tools and controls to effectively manage permissions, including:
 - Transparent views of what access is in place, filtered by user/group
 - Searchable, simplified deployment and management of Content Suite
 - Reduced risk of information leaks
 - Support for internal information controls required to ensure compliance with a broad range of governance and legislative obligations

Key integrations

- OpenText Content Suite Platform
- OpenText Extended ECM

OpenText Email Filing for eDOCS by Formpipe

OpenText™ Email Filing for eDOCS by Formpipe extends the power and capability of eDOCS by providing users with easy and efficient methods to save email into the OpenText™ eDOCS repository.

Partner overview

Formpipe has been an OpenText authorized Solution Extension Partner since 2008. Formpipe is based in Sweden and has been developing and implementing eDOCS based solutions for more than 20 years.

Product overview

Email Filing allows users both manual and automated ways to quickly and easily save email into eDOCS. Users can then perform a single powerful search in eDOCS for relevant information saved in email, Microsoft® Word or any other application data saved into the eDOCS repository. Users can purge email from Microsoft Exchange/Outlook® once it is saved to eDOCS, making Exchange more efficient and better performing. Email Filing helps eDOCS users increase productivity and efficiency by saving time and effort when saving and finding valuable information.

Product highlights

- Auto folder filing: Automates email saving based on existing user folder structure and business practice
- Suggestive quick filing: Helps users quickly decide the correct metadata to use when filing email into eDOCS
- Marking of filed email: Marks emails saved into eDOCS so users know what has been filed and with what metadata
- Auto thread and subject filing: Helps ensure all relevant email gets filed, saving users time and effort
- Auto deletion tools: Easily deletes all saved email out of Exchange to provide better performance
- Mobile device filing: Helps filing email from any mobile device

Value proposition

- Improve content organization: Provides automated and easy to use functionality for saving email into eDOCS
- Increase data management efficiency and user productivity: Allows users to do a single search for both documents and email once email is in eDOCS, saving time and effort
- Increase compliance: Eliminates risk regarding discovery requests for email related to lawsuits or DSAR obligations

Key Integrations

- OpenText eDOCS
- Microsoft Exchange/Outlook

OpenText Power Tools for Content Suite Platform by Global Cents

OpenText™ Power Tool for Content Suite Platform by Global Cents speeds the deployment of OpenText™ Content Suite Platform across Content Suite Platform environments (e.g. from development to test to production), largely eliminating manual intervention.

Partner overview

Global Cents is an OpenText Solution Extension Partner, delivering and supporting Content Suite Platform products since 2004. Its suite of Power Tools enhances and extends Content Suite Platform and OpenText™ Extended ECM, enabling customers to enjoy greater delivered value from their investment.

Product overview

Power Tools for Content Suite Platform by Global Cents transfers nearly all Content Suite Platform objects, including users and groups, documents, folder taxonomies, business workspaces, transmittals, workflow maps, form templates, forms, categories and attributes between Content Suite Platform environments safely, efficiently and with no errors. It also moves items from one version of Content Suite Platform to another using a simple, familiar, web-based UI with no need to create and test complex migration scripts.

Product highlights

With Power Tools for Content Suite Platform, users can select:

- Users and groups for export.
- Users or groups based on an SQL query.
- Individual items or trees for export.
- Items based on an SQL query.
- The number of versions exported for each versioned item (All, Current, Last).

Users can export:

- Item audit trails and notification interests.
- Item versions without having the content converted to base64 and stored in the XML export.
- Active users, deleted users and groups.
- A container item with none of its children.
- A taxonomy tree with no document contents.

Power Tools for Content Suite Platform:

- Delivers simple user interface for exports and imports.
- Preserves category data.
- Upholds item permissions.
- Maintains OpenText™ Records Management data.
- Retains all links between different items.
- Replaces target strings in item definitions.
- Maintains original create and modification dates.

Value proposition

- Select, export and import objects with a familiar UI
- Migrate any object with confidence
- Reduce the cost and time of migrations
- Automate the migration of applications across instances and across versions of Content Suite Platform
- Test and troubleshoot Content Suite Platform objects

Key integrations

- OpenText Content Suite Platform
- OpenText Content Suite
- OpenText Extended ECM

OpenText Web Capture for Capture Center by Image Access

OpenText™ Web Capture for Capture Center by Image Access is a high-performance, web-based capture platform enabling businesses to push out capture to wherever it is required by simply accessing a browser. It solves the problems associated with deploying and supporting capture applications via centralized management, while leveraging investments made in OpenText™ Capture Center resulting in overall lower costs with higher efficiencies. Capable of being embedded in business applications, Web Capture for Capture Center by Image Access Transactional Client makes scanning and capture part of a business process, making information immediately available—further minimizing infrastructure and support costs.

Partner overview

Image Access Corporation is a software solutions company that has been focused on the Enterprise Document Management industry for more than 30 years, including 20 years of partnering closely with OpenText. Image Access Corporation has a proven record delivering systems to Fortune 500 firms in the financial, healthcare, retail, government, legal sectors and more.

Product overview

Web Capture for Capture Center by Image Access is a web-based scanning and indexing solution for both distributed and centralized scanning. Praised by many large enterprises, Web Capture for Capture Center by Image Access:

- Is easy to use for distributed and centralized scanning/indexing.
- Can be embedded in another web application for transactional scanning.
- Delivers a browser experience equal to or better than thick client, supporting scanners up to 210 ppm.
- Provides simple integration and is highly customizable.

Product highlights

- Pricing is based on concurrent licenses (not volume/pages based)
- Supports high-volume, production-level scanners
- HTML5 based client available
- Mobile application for iOS and Android™ devices
- Direct integration with OpenText™ Intelligent Capture, Capture Center, Kofax®, Datacap, OpenText™ Documentum™, IBM® FileNet®, Box, Alfresco® and Microsoft® SharePoint®

Value proposition

- Only product available on the market that provides a fully-featured, browser-based capture solution
- Lowers IT costs associated with document capture since licensing is not based on volume
- Information and documents are immediately available in the enterprise content management system
- Ease of deployment, updates and support via centralized management

Key integrations

- OpenText Intelligent Capture
- OpenText™ OT2 Platform Extensions
- OpenText™ Documentum™ xCP
- OpenText™ Documentum™ D2
- OpenText™ Content Suite Platform
- OpenText Capture Center
- OpenText™ Application Content Management

OpenText Application Designer for Content Suite by KineMatik

OpenText™ Application Designer for Content Suite by KineMatik allows applications to be configured in OpenText™ Content Suite to meet any end-user business requirements.

Partner overview

KineMatik is an OpenText Solution Extension Partner developing solutions for Content Suite, including OpenText™ Project Management for Content Suite by KineMatik, business applications, Business Application Builder, OpenText™ Form Builder for Content Suite by KineMatik, OpenText™ Publisher for Content Suite by Kinematik and OpenText™ Electronic Lab Notebook for Content Suite by Kinematik. The KineMatik solutions extend content management to all departments.

Product overview

Application Designer for Content Suite by KineMatik allows applications to be configured using OpenText™ Content Suite to meet varied end-user business requirements and significantly extend the value of a content management platform.

Product highlights

- Configure business process applications according to end-user and business requirements
- Extend Content Suite Workspaces with standardized configuration
- Integrate forms and workflows into OpenText™ Connected Workspaces to provide a unified data interface
- Standardize data collection throughout the organization
- Get direct access to all related data through an easy to use interface
- Leverage simple low-code development of application and form interface

Value proposition

- Automated business processes through configuration to meet organizational requirements
- Unified access to application data and standardized rules for data collection, ensuring consistent and error-free reports
- Efficient compilation of reports with realtime data
- Greater efficiency and cost reduction by extending Content Services to all departments
- Direct and quick access to all business process data
- Extended use of existing ECM platform, Content Suite and easily integrate with enterprise systems, such as SAP, Oracle and more

Key integrations

- OpenText Content Suite

OpenText Applications for Content Suite by KineMatik

OpenText™ Applications for Content Suite is a library of plug-in applications, including audits, change control, complaints, CAPA, document change control, equipment register, SOP training and more.

Partner overview

KineMatik is an OpenText Solution Extension Partner developing solutions for OpenText™ Content Suite, including OpenText™ Project Management for Content Suite by KineMatik, Business Applications, Business Application Builder, OpenText™ Form Builder for Content Suite by KineMatik, OpenText™ Publisher for Content Suite by Kinematik and OpenText™ Electronic Lab Notebook for Content Suite by Kinematik. The KineMatik solutions extend content management to all departments.

Product overview

Applications for Content Suite by Kinematik is a library of turnkey business applications, which provides linked business processes with content management allowing a realtime view of all department metrics and trends, across an organization. The business process applications have the capacity to store all processes and documents in a single system, significantly improving compliance, cost effectiveness, efficiency, product quality and go to market time.

- Single system for all business applications, on Content Suite
- Central repository for all business documents and records
- Workflow-enabled processes to capture an organization's records and content
- Audit trails and tracking of changes, amendments and improvements
- Procedure compliance in line with organizational standard operating procedure
- Realtime data and reporting templates to enable a 360-degree view of business processes
- Seamless integration, easy deployment and easy to use
- Integrate with enterprise systems via OpenText™ Extended ECM
- Form Builder to easily reconfigure Form Views
- Configurable application interface
- Business Application Builder—configure applications using Content Suite to meet varied end-user business requirements

Value proposition

- Automate all business processes to reduce errors, risks and issues
- Get easy access for all departments, reduce system costs and search all content via a single system and central database
- Make better, faster and more informed decisions with realtime data and reports
- Minimize errors with pre-configured applications that define workflows and forms, providing a systematic way of capturing records and content
- Reduce time and costs for deployment and configuration using Form Builder and Configuration Editor
- Improve governance and compliance, leading to reduced risks
- Enhance customer experience and satisfaction
- Extend the use of Content Suite and easily integrate with enterprise systems, such as SAP, Oracle and more

Key integrations

- OpenText Content Suite

OpenText Form Builder for Content Suite by KineMatik

OpenText™ Form Builder for Content Suite by KineMatik enables any OpenText™ Content Suite user to create and edit professional looking forms.

Partner overview

KineMatik is an OpenText Solution Extension Partner developing solutions for OpenText™ Content Suite, including OpenText™ Project Management for Content Suite by KineMatik, Business Applications, Business Application Builder, OpenText™ Form Builder for Content Suite by KineMatik, OpenText™ Publisher for Content Suite by Kinematik and OpenText™ Electronic Lab Notebook for Content Suite by Kinematik. The KineMatik solutions extend content management to all departments.

Product overview

Creation and form development can often take a considerable amount of time, money and resources. Form Builder for Content Suite by KineMatik enables any Content Suite user to create and edit professional, streamlined looking forms, without developer expertise, saving organizations valuable time and essential resources.

Product highlights

- Define form sections and layout
- Add, remove and arrange form attributes
- Configure form buttons with various library actions
- Enable form view sidebar widgets, e.g. attachments, comments and timelines
- Configure form pop-up windows
- Supports: table key lookups for both Content Suite and external systems, form field validation and dependent actions, automatic document numbering attributes for more enhanced support for Content Suite for engineering and tab-based layouts for faster and cleaner information

Value proposition

- Perform easy and quick configuration of OpenText™ Content Server Form Views, saving essential time and resources
- Increase user adoption of Content Server
- Accelerate creation and configuration of Form Views
- Reduce dependency on developers and use resources more efficiently
- Leverage drag and drop attributes to minimize errors when creating Form Views

Key integrations

- OpenText Content Suite

OpenText Project Management for Content Suite Platform by KineMatik

OpenText™ Project Management for Content Suite Platform by KineMatik provides industry-standard, collaborative and advanced project management tools for OpenText™ Content Suite Platform.

Partner overview

KineMatik is an OpenText Solution Extension Partner developing solutions for OpenText™ Content Suite, including OpenText™ Project Management for Content Suite by KineMatik, Business Applications, Business Application Builder, OpenText™ Form Builder for Content Suite by KineMatik, OpenText™ Publisher for Content Suite by Kinematik and OpenText™ Electronic Lab Notebook for Content Suite by Kinematik. The KineMatik solutions extend content management to all departments.

Product overview

Project Management for Content Suite by KineMatik provides industry standard, collaborative and advanced project management tools for Content Suite. Users can click through to project reports to see the details on cost schedule, risks, issues and more. This solution integrates projects and tasks with enterprise documents in Content Suite.

Product highlights

- Get advanced project management tools, including Gantt charts, project scheduling, timesheet management, program reports, resource and role management, project baselines and critical path
- Manage, track and integrate all projects, tasks and related documents in a single, central system
- Search and retrieve all relevant documents
- Access realtime reports using out-of-the box dashboards
- Configure new dashboards using OpenText™ WebReports
- Allocate resources to tasks using a daily or a total work effort with advanced realtime resource management:
- Self-assign a task and log work to a timesheet with flexible task assignments
- Use advanced timesheet management with support for submission and approval process
- Update project schedules and resourcing using an interactive Gantt
- Stage gate automation using OpenText™ Content Server workflows initiated directly from the project
- Use Content Suite audit and version controls for all activities
- Integrate with enterprise systems, such as OpenText™ Extended ECM for SAP® Solutions and OpenText™ Extended ECM for Engineering

- Project templating facilitates continuous improvement process (CIP)
- Project compliance applications—risks, issues, learnings and project ideation
- Project ideation fosters project and product innovation in a controlled environment

Value proposition

- Streamline project set-up and execution and increase project efficiency
- Accelerate project completion
- Optimize production facilities to increase revenue
- Optimize resource utilization and reduce project costs
- Reduce meeting times and prioritize project tasks
- Manage and minimize risks and issues, avoiding delays and penalties
- Foster product innovation
- Reduce project costs and penalties
- Increase project collaboration to improve project efficiencies
- Get a 360-degree view of project information and status with realtime data.
- Make better, faster and more informed decisions
- Improve governance and compliance
- Extend the use of existing ECM and easily integrate with enterprise systems, such as SAP, Oracle and more

Key integrations

- OpenText Content Suite Platform

OpenText Publisher for Content Suite by KineMatik

OpenText™ Publisher for Content Suite by KineMatik provides a comprehensive publishing tool to help users quickly assemble complex documents from detailed data in OpenText™ Content Suite.

Partner overview

KineMatik is an OpenText Solution Extension Partner developing solutions for OpenText™ Content Suite, including OpenText™ Project Management for Content Suite by KineMatik, Business Applications, Business Application Builder, OpenText™ Form Builder for Content Suite by KineMatik, OpenText™ Publisher for Content Suite by KineMatik and OpenText™ Electronic Lab Notebook for Content Suite by KineMatik. The KineMatik solutions extend content management to all departments.

Product overview

Preparing in-depth documents, such as Databook or MRBs, from Content Suite or OpenText™ Extended ECM data can be time consuming and error prone. Publisher for Content Suite by KineMatik enables users to convert and merge content to a single PDF document; include document metadata (category attributes, system attributes, classifications); generate configurable cover pages, table of contents and separator pages, including metadata; and maintain and create PDF bookmarks.

Product highlights

- Publish directly from Content Suite/Extended ECM, reducing time and errors associated with manual collation and publishing
- Use drag-and-drop functions to generate document structures
- Publish document to workflows, simplifying and accelerating the review and approval process
- Permission govern template access and settings coupled with full audit trails to ensure regulation transparency and compliance
- Ensure consistent formatting of all pages with OpenText™ WebReports-designed cover and separator pages
- Enable Table of Contents for the entire document or for document sections
- Add forms and views built using Form Builder with assembly editor support
- Supports Smart View
- Supports more than 400 file types

Value proposition

- Collate all the information you need, such as Databook, a manufacturing book or a complete technical document
- Pull all documents and metadata into a single document automatically
- Add Forms to an assembly with minimal clicks, using the Assembly Editor Form Support
- Publish to a workflow, ensuring that the final document can progress through a review process

Control the final formatting of the published document with templates and allow the definition of cover pages, separator pages, table of contents and more for professional, customer-ready documents

- Accelerate reviews with email notifications to reviewers
- Ensure compatibility with more than 400 file types (Microsoft Office, PDF, CAD and more)

OpenText Supplier Invoice Management System by Muraai

Supplier Invoice Management System in short known as SIMS solution by Muraai helps organizations to manage the Accounts Payable for any ERP systems. The solution leverages Opentext™ Appworks, Opentext™ Capture/IC/Captiva, Opentext™ ContentSuite (XECM), and Opentext™ Analytics to bring the end to end digitization experience, efficiency, transparency, and compliance with Accounts Payable process.

Partner overview

Muraai is an OpenText Solution Extension Provider, Re-Selling Partner, and Opentext Service Partner is the leading solution and service provider for Appworks, Content platforms to the Global market.

Product overview

SIMS by Muraai helps to address the AP invoice processing in full integration with any ERP. The solution supports one ERP or multiple ERP environments. Time is the major pain-point in the AP invoice processing; various factors contribute to this pain-point like receiving of Invoices (Paper, email, and EDI) and scanning them, manually keying in information. Processing the invoices is labor-intensive and time-consuming, highly error-prone.

SIMS solution is designed to handle both PO and Non-PO AP Invoice process, starting from receiving invoices through multiple incoming channels like eMail, Scan/Paper, Fax, EDI, Portal, Trading Grid, etc and takes it to the OCR step for the digital document based invoices, on successful extraction, the data is pushed to the Process Layer, which is integrated to the ERP to compare the invoices metadata automatically for the 3 way matching for PO based invoices, all good invoices goes to posting directly for any exceptions, it is segregated and routed for the approval process and once resolved, it is posted to the ERP. Non-PO invoices go for GL and CC Coding, with the DOA (Delegation of Authority) configurable workflow routes the invoices to the appropriate approval process, and once approved, the invoice goes to posting. The powerful analytical capabilities within SIMS provide decision makers and management with real-time visibility into procurement operations and empowers decision-makers with an accurate decision to manage the Cash Flow while paying the Suppliers on-time.

Product highlights

- The Digital transformation will free-up resources and streamline the AP Invoice Processing.
- Brings total transparency to the process, which translates into effective communication and collaboration with the Business Partners and Suppliers.
- Helps with potential opportunities to enhance discount programs and helps to avoid paying penalties due to delayed processing.
- The increased speed helps manage the working capital more efficiently.
- Brings total transparency across the board.

Value proposition

- Reduce per invoice processing costs (cuts cost by 80-90% in the very first year).
- Increase the Number of Invoices processed. One FTE can handle up to 15,000 invoices a month or more.
- Reduce cycle time to less than 3 days of processing an Invoice.
 - Straight through all good invoices in < 5 minutes.
 - Medium Complex approval in < 48 – 76 hours.
 - Complex approvals between 5-10 days.
- AP software available on the move for faster processing (PC, Mobile and Tab).
- Enables, highlight early discount opportunities; research says 80% of the discount opportunities usually missed.
- Avoid paying penalties due to delay in the AP Process, where applicable.

Key integrations

- Opentext™ Appworks
- Opentext™ Capture/IC/Captiva
- Opentext™ Content Suite (xECM)
- Opentext™ Analytics

OCR – Different Vendor invoices formats are validated and metadata extracted for invoice processing

Landing Page – Dashboards and Status of the invoices in process

OpenText Application Retirement for InfoArchive by Platform 3

OpenText™ Application Retirement for InfoArchive by Platform 3 Solutions helps organization easily retire legacy IT applications in a compliant and efficient manner by connecting, learning, configuring, extracting and maintaining data governance during migrations to OpenText™ InfoArchive as the system-of-record.

Partner overview

Platform 3 Solutions has been an OpenText Solution Extension partner since 2018 and an OpenText authorized Reseller since 2017. Platform 3 Solutions is a leading InfoArchive partner with a global presence, application-retirement expert consultants and real-world experiences in retiring thousands of applications for clients, such as United Health, Medtronic, NASDAQ, JP Morgan Chase and Briggs & Stratton. Platform 3 Solutions helps customers reduce IT costs, maintain proper information governance and enable them to adopt advanced technologies faster, while being 100-percent focused on the InfoArchive repository as the final database for archived and retired systems.

Product overview

Application Retirement for InfoArchive by Platform 3 Solutions provides a single toolset that includes:

- **Extraction connectors:** Including working with IBM mainframe/ AS400 systems, traditional database systems and unstructured systems, such as IBM® Notes®, Microsoft® SharePoint® and legacy ECM technologies
- **Metadata analytics:** Unique capabilities to automatically understand data relationships and create user views
- **Extraction services:** Move the data and content at a rate that makes sense, rather through a slower, trickle feed or max network capacity
- **InfoArchive configurator:** Automatically configure InfoArchive for the legacy information, data relationships and data retention plans
- **Query screen wizard builder:** Bring a wizard-based, screen-building experience to automatically create InfoArchive query and reporting screens

Product highlights and value proposition

- Automatically connects to any legacy technology, rather open systems, Windows® or IBM mainframe
- Automatically extracts the business logic and data intercedences necessary to effectively extract information from legacy systems
- Automates set-up, data movement and transformation and query/reporting results for end-users
- Maintains chain of custody in data movement to validate information integrity to the records, compliance and legal teams
- Allows for repeatability of best practices as an organization looks to build out an 'Application Decommissioning Factory' model to clean up its senile and zombie applications
- Drives incremental spends and archive growth via time-to-value brought to InfoArchive

Key integrations

- OpenText InfoArchive

OpenText Content Security and Performance by Reveille

OpenText™ Content Security and Performance by Reveille is a powerful management and analytics solution that provides visibility and control over OpenText content platforms—OpenText™ Content Suite, OpenText™ Documentum™, OpenText™ Intelligent Capture, OpenText™ InfoArchive and OpenText™ xPression™. It goes well beyond general-purpose monitoring, providing detailed and active insight into the performance, adoption, planning, user behavior, security and audit of customers' business-critical content stacks.

Partner overview

Reveille is a proud member of the Solution Extension (SolEx) program. In the content space since 2001, Reveille works very closely with ECM/CSP providers to develop a deep understanding of their complex content environments. As a result, this purpose-built solution has allowed Reveille to cultivate happier customers for its partners by empowering them to run clean, secure and highly available environments.

Product overview

Content Security and Performance by Reveille harvests data and content-user transaction detail from each product with which it integrates. It uses that information to create insight and action along a series of disciplines: performance, app adoption, upgrade and capacity planning, reporting, audit and security to enhance the value of existing content platform investments. Content Security and Performance by Reveille operates in on-premises, cloud and hybrid environments, leveraging patented collector technology.

Product highlights

- Built with content services in mind—mission control for the entire content infrastructure
- Deep integration to OpenText with hundreds of out-of-the-box tests and numerous baseline operating KPIs
- Agentless architecture, auto-discovery and auto-configuration makes implementation a breeze
- Continuous distillation and decision on incoming data alerts organizations to issues
- Compelling and simple visualization of vast pool of knowledge
- Automatic and intelligent avoidance or remediation of issues or streamlined manual reaction
- Incorporated with Reveille's long heritage with ECM/CSP operating experience and working relationships with OpenText product management teams

Value proposition

- Improves health, security and reliability of CSP/ECM infrastructure
- Provides user activity reporting for hardened security and evidence-based audit compliance
- Enables users to forecast capacity, plan for upgrades and prepare user-based chargeback reporting
- Allows users to see developing issues and implement automatic resolution before user and business impact
- Lets users focus on new business initiatives instead of 'babysitting' platform issues
- Increases return on investment with implementation in weeks

Key integrations

- OpenText™ Content Suite
- OpenText™ Documentum
- OpenText™ Intelligent Capture
- OpenText™ InfoArchive
- OpenText™ xPression

OpenText Content Migrator for eDOCS by SeeUnity

OpenText™ Content Migrator for eDOCS by SeeUnity solution is a powerful platform that will enable users to configure a migration in the way that is best suited to their business. Content Migrator for eDOCS by SeeUnity is built upon the native connectors of OpenText™ eDOCS, OpenText™ Content Server and OpenText™ Documentum™ systems. It helps organizations seamlessly transition content and its associated metadata, security, versions, document links, related documents, references and history to a new Enterprise Content Management system.

Partner overview

SeeUnity is an OpenText Solution Extension Partner with more than 150 joint customers. Its products have been listed on the eDOCS price list for more than 11 years. With SeeUnity's products, OpenText extends the reach of eDOCS by integrating and synchronizing eDOCS into other repositories. Its products enable secure, collaborative work environments, while ensuring content published on a Microsoft® SharePoint® intranet or extranet is governed and compliant.

Product overview

This feature-rich and scalable product enables secure content migration to and from OpenText™ Content Suite Platform, eDOCS, SharePoint, SharePoint Online and more. The tool is designed to address each facet of the migration process and expedite tasks that can be automated. Using the powerful Content Migrator Management Studio will save hours of work with configurable and reusable migration templates. Detailed reporting guides users through data validation and test runs. The solution allows an organization to take full advantage of its new environment by cleaning up, restructuring or reclassifying data during the migration process. Organizations can maintain productivity during the project and choose a convenient cutover date with delta syncs.

Product highlights

- Delta syncs
- Reusable migration templates
- Advanced metadata mapping
- Digital fingerprint
- C# scripting for customization
- Data verification
- Data transformation
- Detailed reporting
- Batch error reprocessing
- Rollback
- Performance optimization

Value proposition

- Reduce cost and complexity: Out-of-the-box templates save hours of scripting time
- Maximize productivity: Synchronized migration allows for minimal disruption
- Increase user adoption: Clean up source data and configure for an optimized target system
- Minimize errors: Customizable metadata mapping, detailed reporting and the ability to reprocess errors enable full project oversight

Key integrations

- OpenText eDOCS
- OpenText Content Suite Platform
- OpenText Documentum
- Microsoft SharePoint and SharePoint Online

OpenText eDOCS DM Extensions for Microsoft SharePoint by SeeUnity

With SeeUnity's products, OpenText extends the reach of OpenText™ eDOCS by integrating and synchronizing eDOCS into other repositories. SeeUnity's products enable secure, collaborative work environments, while ensuring content published on a Microsoft® SharePoint® intranet or extranet is governed and compliant. It can migrate documents between OpenText™ Content Suite Platform, eDOCS, SharePoint, and other repositories with the OpenText™ Content Migrator for eDOCS. These products are adaptable and scalable, allowing for customer growth and changing ECM environments.

Partner overview

SeeUnity is a Solution Extension Partner with more than 150 joint customers. Its products have been listed on the OpenText eDOCS price list for more than 11 years.

Product overview

Web parts/app parts give a SharePoint user access into one or more eDOCS libraries and other external applications. The solution provides immediate information access from a single user interface with a powerful federated search and extends SharePoint search, enabling users to simultaneously search across active content in SharePoint databases as well as archived records within eDOCS.

Product highlights

- Centralized access to content with a customizable display
- Configurable federated search across multiple repositories from a single interface
- Realtime security trimming
- Extends native functionalities of SharePoint directly into web interface, such as check in/checkout
- Drag and drop to upload documents into the system of record
- View and edit with Microsoft® Office Online

Value proposition

- Increase efficiency and productivity: Simplify workflow by securely surfacing eDOCS DM and other ECM systems' content within a single SharePoint user interface and provide an efficient way to quickly search and return relevant security trimmed results
- Increase user adoption: Enable users to work within SharePoint to access and manage their DMS and other repositories content
- Maintain governance: Avoid content replication stored in multiple repositories

Key integrations

- OpenText eDOCS
- OpenText Documentum
- Microsoft SharePoint and Sharepoint Online

Search for SharePoint results

OpenText eDOCS Integration for Microsoft SharePoint by SeeUnity

OpenText™ eDOCS Integration for Microsoft® SharePoint® by SeeUnity makes it simple to integrate DM systems and external systems, such as SharePoint. eDOCS Integration for Microsoft SharePoint by SeeUnity can surface from within an app part, web part or web-based service a window that will show DM content directly from within the external application. This solution not only displays content, but also extends the native functionality of a DM into the application of choice so that employees can work directly with their content without losing functionality or crucial metadata.

Partner overview

SeeUnity is a Solution Extension Partner with more than 150 joint customers. Its products have been listed on the OpenText eDOCS price list for more than 11 years. With SeeUnity’s products, OpenText extends the reach of eDOCS by integrating and synchronizing eDOCS into other repositories. Its products enable secure, collaborative work environments while ensuring content published on a SharePoint intranet or extranet is governed and compliant.

Product overview

eDOCS Integration for Microsoft SharePoint by SeeUnity holds the same functionality of DM Extensions for SharePoint, plus archiving and bi-directional synchronization of content between SharePoint and eDOCS. Users can seamlessly connect, collaborate, stay compliant and leverage powerful SharePoint federated search across all repositories.

Product highlights

- Centralized access to content with a customizable display
- Configurable, federated search across multiple repositories from a single interface
- Realtime security trimming
- Advanced auditing capabilities

- Configurable, rules-based synchronization to archive, publish or bi-directionally sync content between systems
- Publish documents from eDOCS to a SharePoint extranet
- Bi-directionally synchronize documents across repositories
- Archive documents to the repository of choice and optionally delete or replace documents with a link or stub
- Security trimmed sync can be automated or user initiated
- Extend native functionalities of SharePoint directly into web interface, such as check in/checkout
- Drag and drop to upload documents into the system of record
- View and edit with Microsoft® Office Online
- Administrators can control what content is synced and when

Value proposition

- Increase efficiency and productivity: Simplify workflow by securely integrating with the best-in-class business applications, surface eDOCS DM and other ECM systems content within a single SharePoint user interface and provide an efficient way to quickly search and return relevant security trimmed results
- Increase user adoption: Enable users to work within SharePoint to access and manage their DMS and other repositories’ content
- Enable secure collaboration: Support collaborative workspaces internally and externally
- Maintain governance and compliance: Control the content lifecycle by archiving content interactively or automatically back to eDOCS DM and maintain one version of the truth

Key integrations

- OpenText eDOCS
- OpenText Content Suite Platform
- OpenText Documentum

OpenText eDOCS Synchronization for Microsoft SharePoint by SeeUnity

Sync anywhere, work everywhere. OpenText™ eDOCS Synchronization for Microsoft® SharePoint® by SeeUnity gives employees the freedom to work where they want and saves them the time and hassle of working between systems. It also enables IT departments to keep content under control.

Partner overview

SeeUnity is an OpenText Solution Extension Partner with more than 150 joint customers. Its products have been listed on the OpenText eDOCS price list for more than 11 years. With SeeUnity's products, OpenText extends the reach of eDOCS by integrating and synchronizing eDOCS into other repositories. Its products enable secure, collaborative work environments, while ensuring content published on a SharePoint intranet or extranet is governed and compliant.

Product overview

With eDOCS Synchronization for Microsoft® SharePoint® by SeeUnity, users can seamlessly connect, collaborate and stay compliant. Rather than relying on users to store and save documents, eDOCS Synchronization for SharePoint automatically synchronizes entire directories between SharePoint and eDOCS and keeps both replicated directories completely up to date. The system makes it easy to configure rules to manage folder conflicts, map metadata between systems and sync permission changes.

Product highlights

- Configurable, rules-based synchronization to archive, publish or bi-directionally sync content between systems
- Publish documents from eDOCS to a SharePoint extranet
- Bi-directionally synchronize documents across repositories
- Archive documents to the repository of choice and optionally delete or replace documents with a link or stub
- Advanced auditing capabilities
- Security trimmed sync can be automated or user initiated
- Administrators can control what content is synced and when

Value proposition

- Increase efficiency and productivity: Simplify workflow by securely integrating with the best-in-class business applications
- Enable secure collaboration: Support collaborative workspaces internally and externally
- Maintain governance and compliance: Control the content lifecycle by archiving content interactively or automatically back to eDOCS DM and maintain one version of the truth

Key Integrations

- OpenText™ eDOCS
- OpenText™ Content Suite Platform
- OpenText™ Documentum™
- Microsoft SharePoint and SharePoint Online

Adding a new sync rule for SharePoint and eDOCS

OpenText Shinydrive for Content Suite Platform by Shinydocs

OpenText™ Shinydrive™ for Content Suite Platform by Shinydocs is the best-selling interface for OpenText™ Content Suite Platform. Driving 100 percent adoption of the Content Suite Platform and ensuring every enterprise file has an audit history, version history, permissions and classifications, Shinydrive™ makes it possible to search across repositories and delivers on information governance requirements without changing the way users work.

Partner overview

Shinydocs is a Solution Extension Partner and OpenText Global Technology Partner of the Year for 2016 and 2017.

Product overview

The majority of enterprise files exist on user desktops, in email and stored in shared drives. Insecure, unstructured and often completely unsearchable, this information presents a significant liability and security issue. Shinydrive for Content Suite Platform by Shinydocs moves enterprise information into the Content Suite Platform with zero user disruption and eliminates the need for training. Users can migrate content to Livelink/Content Suite Platform while keeping the same drive letters and UNC paths. Linked documents simply work in Content Suite Platform, including xrefs in complex engineering documents and linked spreadsheets. The solution reduces the time required for users to search for files, emails and information across unmanaged repositories. Shinydocs offers the fastest time to value on the market with a deployment time of less than an hour.

Product highlights

- Work in letter drives and desktops, with files automatically mapped to the Content Suite Platform, ensuring 100 percent of users are managing documents
- Migrate information in user desktops and file shares into Content Suite Platform with zero downtime and zero user disruption
- Manage complex file types, such as engineering documents and linked Microsoft® Excel® files, seamlessly in the Content Suite Platform, without relying on plug-ins, custom code or complex workarounds

- Ensure all files have an audit history, version history, user managed permissions, classifications and reporting for records management and disposition
- "Save" and "Save As" directly into Content Suite Platform from all desktop applications
- Have a smooth and responsive user experience even in high latency, low availability environments without sacrificing security thanks to intelligent caching
- Install in less than an hour, for the fastest to time to value

Value proposition

- Drives user adoption of Livelink/Content Suite Platform and a 600-percent increase in documents managed in Content Suite Platform within weeks of deployment, as shown at Derby City Council
- Facilitates search across all enterprise content and can improve productivity by as much as 30 percent by consolidating content, according to AIIM
- Installs in less than an hour, making it one of the fastest solutions to deploy with the quickest time to value
- Reduces costs associated with data management by up to 60 percent, while allowing employees to continue working the way they always have

Key integrations

- OpenText Content Suite Platform

OpenText Shinydrive for Documentum by Shinydocs

OpenText™ Shinydrive™ for Documentum™ by Shinydocs drives 100-percent adoption of OpenText™ Documentum™ and ensures every enterprise file has an audit history, version history, permissions and classifications, Shinydrive™ makes search across repositories possible and delivers on information governance requirements without changing the way users work.

Partner overview

Shinydocs is a Solution Extension Partner and OpenText Global Technology Partner of the Year for 2016 and 2017.

Product overview

The majority of enterprise files exist on user desktops, in email and stored in shared drives. Insecure, unstructured and, often, completely unsearchable, this information presents a significant liability and security issue. Shinydrive for Documentum by Shinydocs moves enterprise information into the Documentum repository with zero user disruption and eliminates the need for training. Users can migrate content to Documentum while keeping the same drive letters and UNC paths. Linked documents simply work in Documentum, including xrefs in complex engineering documents and linked spreadsheets. The solution reduces the time required for users to search for files, emails and information across unmanaged repositories. Shinydocs offers the fastest time to value on the market with a deployment time of less than an hour.

Product highlights

- Work in letter drives and desktops with files automatically mapped to Documentum, ensuring 100 percent of users are managing documents
- Migrate information in user desktops and file shares into Documentum with zero downtime and zero user disruption
- Manage complex file types seamlessly in Documentum, such as engineering documents and linked Microsoft® Excel® files, without relying on plug-ins, custom code or complex workarounds

- Ensure all files have an audit history, version history, user managed permissions, classifications and reporting for records management and disposition
- "Save" and "Save As" directly into Documentum from all desktop applications
- Have a smooth and responsive user experience even in high latency, low availability environments without sacrificing security thanks to intelligent caching
- Install in less than an hour, for the fastest to time to value

Value proposition

- Drives user adoption of Livelink/Content Suite Platform and a 600-percent increase in documents managed in Content Suite Platform within weeks of deployment, as shown at Derby City Council
- Facilitates search across all enterprise content and can improve productivity by as much as 30 percent by consolidating content, according to AIIM
- Installs in less than an hour, making it one of the fastest solutions to deploy with the quickest time to value
- Reduces costs associated with data management by up to 60 percent, while allowing employees to continue working the way they always have

OpenText Shinydrive High Performance Enterprise Library by Shinydocs

OpenText™ Shinydrive™ High Performance Enterprise Library by Shinydocs exposes a library of data in an offline state at each remote physical location. The library is searchable directly from Microsoft® Windows® Explorer, opening files in their native application. Whether connectivity issues are caused by being in a remote location or an unforeseen disaster, users will be able to access files offline.

Partner overview

Shinydocs is a Solution Extension Partner and the OpenText Global Technology Partner of the Year for 2016 and 2017.

Product overview

Using Shinydrive High Performance Enterprise Library by Shinydocs, companies can equip their remote locations with continuous, searchable access to enterprise content management (ECM) data, even in an offline state. Remote users can search ECM repositories directly from Windows Explorer using multi-value attributes and metadata in a completely offline state. Since the relevant ECM content is cached, the user experience is as fast remotely as it is locally. A preview pane displays the content and users are able to open files in their native applications. Behind the scenes, Shinydrive High Performance Enterprise Library by Shinydocs crawls the central ECM instance to ensure that content and metadata are up to date. Identical online and offline ECM search experiences make connectivity irrelevant to the user's ability to search and retrieve data from the corporate ECM solution. By ensuring users have persistent access to data, Shinydrive High Performance Enterprise Library by Shinydocs improves operational efficiencies, allowing users to execute better decisions...faster.

Product highlights

- Equip each remote location with a library of information assets that are relevant and accurate to their job and function
- Work on oil rigs in the middle of the ocean, remote project sites or in globally distributed offices and access enterprise information offline
- Improve operations productivity at remote locations and improve time for effective decision-making
- Ensure continuity of operations at remote locations
- The library is automatically and continuously kept up to date with the most relevant documents for each remote location
- In the event of a connectivity emergency, users can still access important documents

Value proposition

- Ensures zero downtime, even in a connectivity disaster
- Installs in less than an hour, making it one of the fastest solutions to deploy with the quickest time to value
- Reduces costs associated with data management by up to 60 percent, while allowing employees to continue working the way they always have

OpenText Active Client Management for Communications Center Enterprise by SoluSoft

OpenText™ Active Client Management for Communications Center Enterprise by SoluSoft is built on the OpenText™ AppWorks Platform, along with OpenText™ Capture Center, OpenText™ Communications Center and OpenText™ Process Intelligence/OpenText™ Magellan™ BI & Reporting to deliver a fast-start case management operational implementation for Insurance. It can be utilized to collect, manage and distribute all supporting content surrounding the Line-of-Business (LOB) processes, such as underwriting, claims and customer service. Active Client Management provides a digitally transformed 360-degree view of clients and other third-party intermediaries' casework, processes, content, correspondence and analytics.

Partner overview

SoluSoft is a global OpenText solution provider and Services Partner specializing in case management, business process management, enterprise content management and document management for more than 15 years within the US and internationally. It offers a full spectrum of CASE/ECM/BPM/RECORD Management solutions along with consulting services. Given its Insurance and Financial domain expertise, coupled with Client Management solution implementation experience (AIA, AIG, MetLife, Hollard, and more), SoluSoft is well positioned to provide Insurance, Banking and Wealth Management solutions on Process Suite/Case Manage/ECM platform with associated technologies.

Product overview

Active Client Management for Communications Center Enterprise by SoluSoft makes it possible to roll out fully functional applications in a matter of weeks with integrated self-service, case management, automated client communications and analytics. The application is built on top of ACM accelerator, so it takes advantage of a fast application and low-code development environment to simplify deployment and customization and speed the rollout of new capabilities, as directed by business experts. It transforms LOB processes, such as underwriting, claims and customer service as shown below.

Product highlights

- New account opening
- Client servicing
- Claims management
- Business intelligence
- Audit trails
- Mobile support
- Automated capture and communications
- Built on low-code development environment

Value proposition

- Increase revenue
- Reduce operating costs
- Increase efficiency
- Increase customer satisfaction
- Improve customer-agent relationship
- Meet regulatory compliance
- Facilitates rapid rollout of innovative insurance products
- A faster path to digital business transformation

Key Integrations

- OpenText Capture Center

OpenText Electronic Common Technical Document for Content Suite Platform by Stratesys

OpenText™ Electronic Common Technical Document for Content Suite Platform by Stratesys is an OpenText™ Content Suite Platform add-on to accelerate the product global eSubmission Process.

Partner overview

Stratesys has been an OpenText Solution Extension Partner since 2016. A multinational company, Stratesys specializes in digital services and is a reference firm in OpenText and SAP ecosystems, focusing on the Content Suite Platform and in all SAP-related solutions, such as OpenText™ Extended ECM for SAP® Solutions and OpenText™ Vendor Invoice Management for SAP® Solutions. Stratesys delivers services in more than 60 countries, having local presence in Brazil, Chile, China, Colombia, Mexico, Portugal, Spain and the U.S.

Product overview

Electronic Common Technical Document for Content Suite Platform by Stratesys is a modular solution, which is part of the GxP Suite and was designed to help the regulatory affairs department of a Life Sciences organization to improve and innovate its dossier preparation and eSubmission process. The solution covers the full eCTD generation process until the export of a ZIP file that includes a folder structure and an XML "backbone" file, which provides metadata about content files and lifecycle instructions for the receiving system, to submit directly to the corresponding regulatory body (EMA, FDA, etc.).

Product highlights

- Pre-configured security model with pre-defined roles
- Pre-configured governance model with pre-defined reports
- Full audit trail of all user actions in the application
- High-level and lower level folder structure enables management of full eCTD generation
- EU Procedures Templates for Recognized Member States and Concerned Member States with/without folder structure
- Other Countries Procedures Templates with/without folder structure

- Automatic agency Name recognition per country
- Automatic initial submission numbering and incremental updates with its sequence number
- XML "backbone" file providing metadata on the entire submission about content files and lifecycle instructions for the receiving system
- Stylesheets that support the presentation and navigation
- Associated document type definitions (DTDs)
- Collaboration with OpenText™ Blazon™ to PDF conversion

Value proposition

- Multi-device and multi access to increase and simplify user adoption and reduce training costs
- Unified dossier preparation processes within the organization, speeding up regulatory audits and process failure identification
- Simplified maintenance with business users administration tools

Key integrations

- OpenText Content Suite Platform
- OpenText Extended ECM for SAP
- OpenText Content Suite Platform Add-on for Microsoft® Office Online
- OpenText™ Brava!™
- OpenText Blazon

related solutions, such as OpenText™ Extended ECM for SAP® Solutions and OpenText™ Vendor Invoice Management for SAP® Solutions. Stratesys delivers services in more than 60 countries, having local presence in Brazil, Chile, China, Colombia, Mexico, Portugal, Spain and the U.S.

Product overview

Electronic Trial Master File Management for Content Suite Platform by Stratesys is a modular solution, which is part of GxP Suite and was designed to give the clinical trials department of a Life Sciences organization and clinical research organizations an application that can help improve and innovate their information recording related to the clinical trials performed. This modular solution covers the full Trial Master File Process, complying with DIA Reference Model (v 2.0 and v 3.0).

Product highlights

- Task-oriented, 100-percent mobile user interface to improve productivity and adoption
- Includes project management components to govern TMF timing and completeness
- Tracks TMF evolution between clinical phases
- Supports location and distribution of content based on text or trail classification data
- Includes Quality Control Workflow for review and approval of content
- Pre-configured security model with pre-defined roles
- Secure external collaboration features for CROs and other third parties
- Enable collaboration with OpenText™ Brava!™

Value proposition

- Manage eTMF data, content and milestones in one single application, speeding up regulatory audits

- Multi-device and multi access to increase and simplify user adoption and reducing training costs
- Simplified maintenance with business users administration tools

Key integrations

- OpenText Content Suite Platform
- OpenText Extended ECM Platform
- OpenText™ Tempo™ Box
- OpenText™ Content Suite Platform Add-on for Microsoft® Office Online
- OpenText Brava! for Content Suite

OpenText GxP Document Management System for Content Suite Platform by Stratesys

OpenText™ GxP Document Management System for Content Suite Platform by Stratesys eDMS is an add-on to manage GxP processes and controlled documented information and meet quality regulatory standards (FDA 21 CFR Part 11, MDR and/or ISO 9001, etc.).

Partner overview

Stratesys has been an OpenText Solution Extension Partner since 2016. A multinational company, Stratesys specializes in digital

services and is a reference firm in OpenText and SAP ecosystems, focusing on the OpenText™ Content Suite Platform and in all SAP-related solutions, such as OpenText™ Extended ECM for SAP® Solutions and OpenText™ Vendor Invoice Management for SAP® Solutions. Stratesys delivers services in more than 60 countries, having local presence in Brazil, Chile, China, Colombia, Mexico, Portugal, Spain and the U.S.

Product overview

GxP Document Management System for Content Suite Platform by Stratesys eDMS is a modular solution, which is part of the GxP Suite and was designed to help the quality department of a Life Sciences organization to improve and innovate its quality management system. The solution covers the fully controlled documented information lifecycle, from creation to the employee training, allowing a 360-degree vision of the regulated documentation process and automating the review, approval and distribution activities related to them. The solution can also be configured to leverage the functionality provided by Extended ECM for SAP Solutions to reduce the time of the batch production record (BPR) generation process.

Product highlights

- Task-oriented, 100-percent mobile user interface to improve productivity and adoption
- Out-of-the-box workflows for creation, renewal, new version and obsoleting for managing the CDI lifecycle
- Pre-configured security model with pre-defined roles
- Automated periodic review and document change order processes
- Pre-defined document types based on industry best practices
- Full audit trail of all user actions in the application (electronic signature)
- Automatic link of CDI to BPR based on SAP production data (material, plant, etc.)
- Enable collaboration with OpenText™ Brava!™ or Microsoft® Office 365®
- Enable access to external users for task completion

and content secure access

Value proposition

- Unify CDI processes across all business groups, speeding up regulatory audits and process failure identification
- Simplify user adoption and reduce training costs
- Accelerate application validation with pre-validated documentation (URS, FRS, DS, and IQ)
- Simplify maintenance with business users administration tools

Key integrations

- OpenText Content Suite Platform
- OpenText Extended ECM for SAP
- OpenText™ Regulated Documents
- OpenText™ Content Suite Platform Add-on for Microsoft® Office Online
- OpenText Brava!

OpenText Quality Event Management for Content Suite Platform by Stratesys

OpenText™ Quality Event Management for Content Suite Platform by Stratesys is an add-on to ensure traceability and control the complete OpenText QA-CAPA for Life Sciences activities.

Partner overview

Stratesys has been an OpenText Solution Extension Partner since 2016. A multinational company, Stratesys specializes in digital

services and is a reference firm in OpenText and SAP ecosystems, focusing on the OpenText™ Content Suite Platform and in all SAP-related solutions, such as OpenText™ Extended ECM for SAP® Solutions and OpenText™ Vendor Invoice Management for SAP® Solutions. Stratesys delivers services in more than 60 countries, having local presence in Brazil, Chile, China, Colombia, Mexico, Portugal, Spain and the U.S.

Product overview

Quality Event Management for Content Suite Platform by Stratesys is a modular solution, which is part of the GxP Suite and was designed to help the quality department of a Life Sciences organization to manage claims, QA non-conformities and deviations.

Product highlights

- Manage and measure full CAPA process performance based on industry standard KPIs
- Pre-configured security model with pre-defined roles
- Reference business data to provide QA-CAPA corporate dashboards
- Link event content to business objects (Material, Customer, Delivery Note, etc.)
- Audit event discovery activities and event closure
- Pre-configured governance model with predefined reports
- Extended event creation and follow-up via mobile app

Value proposition

- Enable the management of the QA-CAPA process in one single

application, speeding up regulatory audits

- Multi-device and multi access to increase and simplify user adoption and reducing training costs
- Accelerate collaboration between QA and other departments for event discovery
- Simplify maintenance with business users administration tools

Key Integrations

- OpenText Content Suite Platform
- OpenText Extended ECM Platform
- OpenText™ Content Suite Platform Add-on for Microsoft® Office Online
- OpenText™ Brava!™ for Content Suite

OpenText Marketing & Media Management by Acheron

OpenText™ Marketing & Media Management by Acheron provides the leverage to manage all marketing and media-related work in one place with fully integrated OpenText™ Media Management systems. This media project management (MPM) solution is built on top of OpenText™ AppWorks™, Media Management and OpenText™ Media Management Creative Review. It allows organizations to create and track media-related project activities at a centralized level. MPM supports project creation and management with dynamic tasks, deliverables and resource management, along with deep integration to Media Management.

Partner overview

Acheron, an OpenText Solution Extension Partner, is an innovative company specializing in Open Text products, such as AppWorks, Media Management, Media Management Creative Review and OpenText™ Content Server. Acheron has successfully supported OpenText customers and extended their OpenText products' footprint. Acheron and OpenText's partnership brings add-on business value and time to market to customers in their digital transformation journey.

Product overview

Marketing & Media Management by Acheron is a comprehensive solution that is built on Media Management and AppWorks to empower marketing teams and project managers to manage all their creative workflow in one place, from initial request to delivery. Marketing & Media Management by Acheron automates the digital project lifecycle and delivers a holistic approach to digital marketing by extending Media Management and customer experience management with the intelligent business process management engine. MPM provides configurable workflows and supports seamless integration with Media Management. It helps in simplifying and streamlining the distribution and tracking of marketing contents to downstream channels.

Product highlights

- Centralized projects
- Resource management
- Task and workflow management
- Project templates
- One-click approvals
- Enhanced collaboration and publishing capabilities
- Gantt charts and calendar views
- Reports and dashboards

Value proposition

- Increased transparency
- Extended team collaboration
- Simplified compliance
- Reduced time to market
- Increased project success rate
- Reduced project review time

Key integrations

- OpenText Media Management
- OpenText AppWorks
- OpenText Media Management Creative Review & Analytics

OpenText Medical Legal Review for Media Management by Acheron

Medical legal review has always been one of the most challenging and complex aspects of the marketing production process for Life Sciences companies. Organizations need a fresh approach to medical legal review that enables a timely and efficient marketing workflow and allows for rapid process innovation. OpenText™ Medical Legal Review for Media Management by Acheron is a medical, legal and regulatory compliance and approval solution providing a comprehensive platform to manage the medical legal reviews and approvals, ensure regulatory compliance and improve the management of creative teams and assets.

Partner overview

Acheron, an OpenText Solution Extension Partner, is an innovative company specializing in Open Text products, such as OpenText™ AppWorks™, OpenText™ Media Management, OpenText™ Media Management Creative Review and OpenText™ Content Server. Acheron has successfully supported OpenText customers and extended their OpenText products' footprint. Acheron and OpenText's partnership brings add-on business value and time to market to customers in their digital transformation journey.

Product overview

Medical Legal Review for Media Management by Acheron is built on Media Management and the AppWorks platform to manage the lifecycle of promotional material. It replaces manual processes with system-driven workflows and lifecycles and leverages Media Management for the content management, versions management, metadata, search and other media operations. The solution leverages AppWorks for the lifecycle management of the content, external system integration and master data management. With this solution, the upstream creation, promotional/regulatory review and downstream publishing/distribution happens in one system, with asset management and complaint review happen together. Medical Legal Review for Media Management by Acheron replaces manual processes with system-driven workflows, reviews, proactive notification and digital collaboration. The unified experience of Media Management and workflows enables users to perform process-related operations and asset-related operations in one place.

Product highlights

- A single source for planning, tracking, authoring and publishing regulated contents
- Quicker submissions with enhanced collaboration and reporting
- Access to contents across the globe in a secured manner and structural storage of contents assisting rapid search
- Workflow and audit tracking mechanisms along with notification capabilities
- Reference and relationship management linking global contents
- Configurable workflows aligning to various market needs
- Fully integrated into Media Management and with various upstream and downstream channels

Value proposition

- Stronger regulatory compliance
- Reduced time to market and improved global brand consistency
- Multichannel interaction and publishing
- Improved efficiency and team productivity
- Stronger collaboration across the internal and external agencies
- Integrated metadata with external systems
- Point-and-click distribution and automated withdrawal

Key integrations

- OpenText Media Management
- OpenText Media Management Creative Review

OpenText Creative Review for Media Management by BLUE Software

OpenText™ Creative Review for Media Management by BLUE Software simplifies and streamlines the review and approval process involved in creating compelling content to enrich customer experiences. Tightly integrated with industry-leading OpenText™ Media Management, it adds sophisticated mark-up capabilities, allowing internal users, external teams and creative agencies to quickly and easily capture and act on clear feedback and requests throughout the creative process.

Partner overview

BLUE Software is an OpenText Solution Extension Partner since 2013. In that time, the number of customers using the Creative Review extended solution module for Media Management has grown to more than 60 and continues on a similar annual growth pace. BLUE Software is the leading provider of label and artwork management technology for consumer brands, retail, pharmaceutical and medical device companies with more than 5,000 companies worldwide.

Product overview

Creative Review for Media Management by BLUE Software simplifies the artwork approval and management process with realtime, online collaboration and proofing tools that significantly improve communication and productivity between all project team members to gain full visibility into review cycles and changes. It increases creative content and quality, improves turnaround time, reduces overall error rates and decreases proofing costs. Creative Review extends Media Management collaborative capabilities, allowing multiple team members to simultaneously view, compare and annotate assets for print, video and online deliverables directly within the Media Management platform.

Product highlights

- Mobile-friendly marketing collaboration application with full version control
- Flexible approval workflow, jobs and task routing integrated into Media Management
- Simplified, reusable job templates
- Secure and scalable for enterprise deployments
- Detailed reports and audit trail
- Flexible deployment: on-premises and in the OpenText Cloud

Value proposition

- Collaborative review: Multiple internal and external teams can simultaneously collaborate online to speed up the approval process (on average 80 percent reduction in cycle times compared to manual processes)
- Cost savings: Faster time to market and multichannel distribution, reduced errors to avoid reprints or make-goods, increased productivity with easy access and workflow transparency and global accessibility for regional localization
- Error identification: Catching potential mistakes, wrong colors, misspelled words, brand guide errors and other potential issues before content is published and shared with customers
- Audit trail: Identify and correct source of recurring errors or project delays and maintain regulatory compliance

Key integrations

- OpenText Media Management

OpenText Media Management Connector for Adobe Experience Manager by CyanGate

OpenText™ Media Management Connector for Adobe® Experience Manager is a solution extension that allows assets to be served from OpenText™ Media Management to Adobe® Experience Manager. The connector adds user functionality to Media Management, allowing users to search for assets based on metadata, ingest assets or link to optimized versions of assets, edit images within AEM and view asset utilization analytics.

Partner overview

CyanGate is an OpenText Services and Solution Extension Partner that specializes in Media Management and builds products and integrations for Media Management. Founded in 2007 by a former member of the Artesia/OpenText Professional Services team, CyanGate is headquartered in Cincinnati, Ohio with an in-house development office in Ankara, Turkey. CyanGate's customers include global Fortune 500 companies in diverse industries, such as Retail, Publishing, Media and Broadcasting.

Product overview

The Media Management Connector for Adobe Experience Manager provides a substantial decrease in manual processes and asset handoff and provides an efficient method to easily find, edit and optimize approved assets for web usage. The connector allows for a single asset repository providing faster and simpler usage across the content lifecycle so that users can easily share and leverage approved assets providing a measurable increase in content reuse and a measurable decrease in time spent while sharing and communicating about assets for web consumption.

Product highlights

- Search/Filter: Users can search and filter through assets using metadata without ingesting assets into AEM
- Media Management asset security and log-in.
- Drag and drop image into Adobe Experience Manager image components easily
- Assets are ingested or linked based on user preference
- AMD: Assets can be resized and edited to optimize resolution and design layout while still linked to the original source asset

Value proposition

- Streamline workflow, enabling users to easily find and optimize approved assets
- Content consumers have one source of the truth for web content
- Decrease in manual processes and approved asset handoff
- Faster go-to-market for campaigns

Key integrations

- OpenText Media Management
- Adobe Experience Manager

OpenText Media Management Connector for FADEL Rights Cloud by CyanGate

OpenText™ Media Management Connector for FADEL® Rights Cloud is a third-party solution that allows usage rights data to be passed between the FADEL® Rights Cloud platform and OpenText™ Media Management. The connector tool adds user functionality to Media Management, allowing users to add or remove usage right agreements to assets, search for assets based on usage metadata, such as territory or use, and to run usage rights clearance checks to ensure proper asset consumption and usage.

Partner overview

CyanGate is an OpenText Services and Solution Extension Partner that specializes in Media Management and builds products and integrations for Media Management. Founded in 2007 by a former member of the Artesia/OpenText Professional Services team, CyanGate is headquartered in Cincinnati, Ohio with an in-house development office in Ankara, Turkey. CyanGate’s customers include global Fortune 500 companies in diverse industries, such as Retail, Publishing, Media and Broadcasting.

Product overview

It is getting more difficult to manage and decipher usage rights on digital assets. It is more challenging when an asset has multiple agreements assigned to it with their own complex details. Content consumers do not have the luxury of time to review each agreement detail to clearly and accurately interpret when, where and how they can use their digital assets. Users need a clean, clear and powerful way to select assets, identify how they intend to use those assets and get clear answers on usage. The Media Management Connector for FADEL Rights Cloud allows content consumers to stay within Media Management in order to find and learn how, where and when they can use their digital assets.

Product highlights

- Create new asset records: Ingesting assets into Media Management with the Connector will automatically create asset records in FADEL Rights Cloud
- Add/Remove agreements: Administrators or librarians in Media Management have the ability to add or remove usage rights on assets by assigning existing agreements created in FADEL Rights Cloud

- Search/Filter: Users can search and filter through assets by usage details, such as territory and use
- Rights clearance: Realtime confirmation in Media Management of when, where and how content can be used
- Data synchronization: Update agreement details in Rights Cloud and that data will synchronize in Media Management

Value proposition

- Streamline workflow to add or remove existing usage rights onto assets in Media Management
- Keep content consumers in Media Management when looking for usage rights details
- Improve approval process for assets (up to 70-percent reduction in average clearance cost)
- Get faster go-to-market for campaigns (up to 20-percent increase in production time)
- Standardize compliance for rights management

Key integrations

- OpenText Media Management
- FADEL Rights Cloud

OpenText Rights Cloud for Media Management by FADEL

OpenText™ Rights Cloud for Media Management by FADEL® is a marketing technology that provides a single “rights” source across agreements, talent and assets—arming organizations with content governance and compliance and smart insights for advertising content. The digital rights management solution enables marketers and advertisers to accelerate campaigns, mitigate risk and reduce costs by gaining full visibility into when, where and how content can be used.

Partner overview

FADEL® is an OpenText Solution Extension partner since 2018. FADEL is the leading provider of rights management solutions and has worked with some of the biggest advertisers and brands across media, life sciences, fast-moving consumer goods, fashion and beauty, publishing and high-tech. Founded in 2003, FADEL is headquartered in Rye, New York and operates offices in New York City, Los Angeles, London and Lebanon.

Product overview

Deciphering rights can be a complex nightmare even for the most digitally savvy organization. Digital assets often have multiple contracts associated with them, (e.g., multiple talent releases, a location release, a license agreement for product placement and a license agreement for stock) and each contract may have multi-dimensional usage rights and restrictions. Coupling OpenText digital asset management solutions with Rights Cloud for Media Management by FADEL allows organizations to more effectively manage their content, while reducing the risk of violating copyright regulations. In fact, Rights Cloud for Media Management by FADEL ties it with DAM assets and deciphers rights in realtime for DAM users. Brands and their agencies are therefore able to manage talent profiles, stock agencies and license agreements, validate content use for advertising campaigns, reuse and repurpose existing content and track against online usage, asset expirations and violations.

Product highlights

- Talent profiles: Gain a unified view and deeper visibility into how a talent is being used across campaigns
- Agreement management: Easily capture and manage agreements and rights for talent, stock agencies and rights holders
- Rights clearance: Realtime, at-a-glance confirmation, direct from the DAM, of when, where and how content can be used
- Intelligent rights inheritance: Change a contract once and all assets reflect the change
- Smart insights: Gain actionable insight on content rights around expirations, usage violations and key trends

Value proposition

- Reduces legal risk from asset misuse
- Improvement of the approval process for assets (up to 70-percent reduction in average clearance cost)
- Speeds go-to-market for campaigns (up to 20-percent increase in production time)
- Maximizes the savings with content reuse (up to 30-percent decrease in production costs)
- Standardizes compliance for rights management
- Provides actionable insight into campaign production elements and costs

Key Integrations

- OpenText™ Media Management

OpenText Video Workflow and Tagging for Media Management by IPV

OpenText™ Video Workflow and Tagging for Media Management by IPV allows companies to edit, archive, transcode and deliver programs and content. It uses professional production tools and OpenText™ Media Management to manage the rich media assets in a secure and accessible library for broader use cases and delivery to traditional and non-traditional broadcast. The integration enables raw assets and work-in-progress files to be managed outside of Media Management with only finished assets and approved material made available to the wider Media Management user community.

Partner overview

IPV is an OpenText Solution Extension Provider that delivers software solutions to enhance the process of creating and managing new video assets. IPV has been providing advanced video workflow solutions for more than 20 years and has major customers across the globe.

Product overview

Video Workflow and Tagging for Media Management solutions offer best of breed technology and applications for media and broadcast, corporate video production and marketing. These sophisticated video tools provide integrated work-in-progress, professional editing, video logging, tagging, collaboration, review and approval, plus secure access to share, deliver and use finished assets. This solution enhances the creative video efforts with rich metadata to manage content delivery, accelerate time to market and increase return on investment. Advanced Video Workflow extends Media Management video capabilities, providing IPV's specialized tools and applications for professional media production. Ingest, collaboration and creative processes during the production, work in progress phase with many derivatives and versions managed in Media Management.

Product highlights

- Simultaneous ingestion of multiple video streams or files
- Automated production of storyboards and addition of metadata
- Production of frame accurate proxies for support of search, browse, edit, review and approve workflows
- Enhanced technical metadata and tagging, version and relationship tracking
- Workflows support the creation of rough-cut edits, EDLs and new clips
- Publish video clips to the web, social media sites, CDNs, etc.
- Proxy stored in Media Management for wider use and distribution

- Integration with Telestream® Vantage® Transcode
- Integrated with Adobe® Premiere® for advanced craft edit capability, also supports Avid® and Apple® Final Cut®
- Integrated with major archiving systems for archive video content, non-linear editors, such as Premiere, Avid and Final Cut, as well as video ingest and transcoding services

Value proposition

- Enhances video production and effectively reduces storage (proxies are two percent of the size of the hi-res file)
- Speeds production of video content, especially in a distributed environment, reduces costs of video production and enables organizations to use remote workers effectively
- Improves the quality of video output, especially for corporate type customers
- Enables corporate customers to make better use of the content by re-purposing it for uses such as social media, promotional video and websites

Key Integrations

- OpenText Media Management

OpenText Content Localization for Media Management by Mediawide

OpenText™ Content Localization for Media Management by Mediawide allows localization, customization and personalization of digital assets to bring efficiencies of “create-once, use-many” to re-purpose, re-express, re-use, and re-create print and digital assets, directly inside OpenText™ Media Management. This is done without incurring expensive and time-consuming interaction between media agencies and distributed marketing teams.

Partner overview

Mediawide is an OpenText Solution Extension Provider since 2016. Mediawide is a leading provider of web to print, ad adaptation, and digital technologies for consumer brands, agencies and retail companies.

Product overview

Content Localization is a marketing collateral creation platform, allowing users to customize and localize marketing collateral. It allows customers to create templates within Adobe® InDesign® and use them to create personalized marketing content. Digital HTML5 Templates are created and used to localize and customize web banner ads, landing pages, email templates and to generate personalized videos, directly in the OpenText™ Media Management UI. Templates, images and deliverables are stored and managed with access to all Media Management functionality. This is a platform that allows customers to respond to ever-growing demands for localized and customized marketing.

Product highlights

- Supports InDesign for print template creation
- Supports Mediawide Professional Services for creation of Digital HTML5 Templates
- Templates are uploaded and stored in Media Management
- User access and permissions are handled by Media Management
- Users can change text and images directly in the browser, without affecting brand guidelines
- Allows non-proportionate resizing of assets
- Batch adaptation is possible through upload of a CSV file
- Includes HTML5 responsive web banner and personalized video creation

Value proposition

- Embedded marketing collateral creation solution, allowing Media Management users to create custom content, initiate and manage, review and approval and deliver approved content to print and digital channels
- Accelerates marketing collateral creation for faster time to market (80-percent overall reduction in project time, end-to-end, when compared to traditional processes involving a media agency)
- Reduces costs for marketing collateral creation (10X reduction in asset development cost)
- Enhances brand equity with consistent branding across outlets and regions
- Protects brand identity

Key integrations

- OpenText Media Management

OpenText Interactive Personalized Videos for Exstream by Mediawide

Organizations can improve conversion rates by using personalized videos within their emails to connect consumers with relevant and engaging content. With OpenText™ Interactive Personalized Videos for Exstream™ by Mediawide, they can create and distribute personalized videos on a mass scale in real time, which can be used for pre-sales, remarketing, onboarding and upselling.

Partner overview

Mediawide is an OpenText Solution Extension Provider since 2016. Mediawide is a leading provider of web to print, ad adaptation and digital technologies for consumer brands, agencies and retail companies.

Product overview

Interactive Personalized Videos for Exstream by Mediawide can be used to connect consumers with relevant, engaging, personalized content. With interactive personalized videos, organizations can address the customer by their first name at the outset, deliver a relevant message and, if needed, engage them with a unique animated and interactive story. Using an existing OpenText™ Exstream™ platform or marketing automation software, users can send out any number of emails, each with their own personalized video. The Mediawide CMP integrates with Exstream and OpenText™ Exstream™ Empower. Interactive Personalized Videos for Exstream by Mediawide can deliver interactive videos, enabling organizations to conduct survey or customer profiling or include call to action buttons within the personalized videos to increase and optimize interaction with the consumer. Interactive video analytics are also included, such as click through rates, video play and video completion rates.

Product highlights

- Create interactive personalized videos for one-to-one messaging within Exstream
- Generate videos through batch or trickle feed
- Personalize using the data that Exstream uses for native personalization—text, images, audio and video can be made variable
- Generate extra personalization by launching the asset builder directly from Exstream Empower Editor
- Create personalized videos on a mass scale in real time, without waiting for rendering of MP4 files
- Videos are HTML5 animations with optional MP4 video, audio files and interactive animations
- Lightweight format

Value proposition

- Personalized videos within email marketing campaigns produce 280-percent greater returns
- An email with a personalized video gets...
 - Four times the open rate
 - Eight times the click through rate (CTR)
 - 75 percent fewer subscribers opting out
- Customer renewal rates are 12 percent higher when personalized video is used
- Engagement levels are two times higher with personalized videos
- Time spent on the page goes up by 62 percent

Key integrations

- OpenText Exstream
- OpenText Exstream Empower

OpenText Video Analytics for Magellan & Media Management by Hendricks Corp.

OpenText™ Video Analytics for Magellan™ & Media Management by Hendricks Corporation add-on for OpenText™ Media Management is a comprehensive video analytics engine that extracts actionable intelligence from a video stream. Video Analytics for Magellan & Media Management finds and characterizes objects, such as people, vehicles, brand logos and even faint smoke objects to optimize the effectiveness and efficiency of a business operation.

Partner overview

Hendricks Corporation is an OpenText Solution Extension Partner since 2016. Hendricks Corporation has been designing solutions around big data and video analytics since 2008 and has more than 20 years of systems integrator experience.

Product overview

Video Analytics for Magellan & Media Management is an analytics engine inside the Media Management platform, as well as supporting integration with OpenText™ Magellan™ for combining video analytics with other data sources. This solution empowers a broad spectrum of mission critical use cases such as dynamic monitoring of queues and people flows in airports, automatic monitoring of roadways, wide area surveillance of ports, industrial facilities, forests for smoke classification and finding, identifying and counting brand logos in broadcast video streams.

Product highlights

- Enables initial detection capabilities and quick identification of other key data from a video source
- Supports feeds from any digital video source
- Includes facial recognition, logo scraping, motion detection and metadata generation, such as demographics, counting
- Supports OpenText™ Content Suite Platform architecture for video analytics, adding metadata to records
- Integrates into Media Management, providing indexed and searchable metadata

Value proposition

- Allows venues, such as stadiums, airports, casinos and other facilities, to enhance their customer experience while maximizing security
- Enables companies to have a comprehensive view of their brand recognition by enabling logo scraping

Key Integrations

- OpenText Magellan
- OpenText Media Management

OpenText e-Invoicing for Communications Center Enterprise by Sovos TrustWeaver

Sovos TrustWeaver is a compliance service provider that guarantees the legal and tax compliance of electronic invoicing documents generated by the OpenText Communications Center Enterprise solution. Sovos TrustWeaver guarantees a compliant result in more than 60 countries across the globe, ensuring that wherever a company does business, their invoices meet the legal and tax requirements.

Partner overview

Sovos TrustWeaver is an OpenText Solution Extension Provider since 2008. Sovos TrustWeaver’s team of multi-national legal experts monitor and interpret regulatory changes in more than 60 countries across the globe. This constant process of monitoring, interpreting and adjusting ensures that the invoices generated by OpenText Communications Center Enterprise are always compliant with the latest electronic invoicing regulations.

Product overview

e-Invoicing for Communications Center Enterprise by Sovos TrustWeaver Compliance is embedded within the Communications Center Enterprise solution and communicates with Sovos TrustWeaver’s cloud to ensure electronic invoices are always compliant with the legal regulations in more than 60 countries. This compliance guarantee reduces the burden on companies having to interpret the ever-changing legal landscape and removes risk of sanctions, fines and reputational harm.

Product highlights

- Guarantees the integrity, authenticity and origin of electronic invoice documents in accordance to relevant countries supported by Sovos TrustWeaver
- Includes compliance map, which is a repository maintained by Sovos TrustWeaver’s team of legal experts that describes the eInvoicing requirements and how Sovos TrustWeaver copes with these requirements in more than 60 countries
- Direct cloud-based interface with national governments tax administrations or appointed bodies for countries (e.g. Italy) that have mandated eInvoicing flows, known as clearance, via a central platform

Value proposition

- Guarantees the legal compliance of eInvoicing documents generated by the Communications Center Enterprise in more than 60 countries
- Reduces the burden on companies having to interpret the ever-changing legal landscape
- Removes risk of sanctions, fines and reputational harm
- Allows organizations to focus on core business, free from the concern of the national and sectoral laws that govern eInvoicing compliance

Key integrations

- OpenText Communications Center Enterprise
- OpenText™ Exstream™
- OpenText™ StreamServe™

3. OpenText Security

OpenText Content Security for EnCase™ by Reville

Data-centric security is an approach to security that emphasizes the security of the data itself rather than the security of networks, endpoints and applications. This is an important view of the digital environment that security teams are tasked with protecting, because the sensitive data can be an organization's crown jewels. Understanding whether documents are being improperly accessed, how users are using them and whether irregular login patterns are occurring is important for high-value digital assets.

Content Security for Encase by Reville monitors user behavior to help detect, speed the investigation of and reduce the impact of a data breach by identifying suspicious access to content within your enterprise content management (ECM) / content services platforms (CSP). It can automatically shut down suspicious user access based on conditions set by the business to dramatically reduce the impact of a content breach from malicious insiders or hackers posing as trusted insiders.

Partner overview

Reville is a proud member of the Solution Extension (SolEx) program. In the content space since 2001, Reville works very closely with ECM/CSP providers to develop a deep understanding of their complex content environments. As a result, this purpose-built solution has allowed Reville to cultivate happier customers for its partners by empowering them to run clean, secure and highly available environments.

Product overview

OpenText Content Security by Reville detects content access anomalies in your ECM and CSP to identify and stop active breaches. Customers gain deep, contextual intelligence about performance, access and user behavior surrounding high-value, business-critical content. Real-time user behavior analytics are included out-of-the-box with deep content services platform (CSP) transaction context to stop unwanted user behavior and access, protect high-value, business-critical content, and to audit access for compliance reporting. API-level integration with EnCase Content Security can be used to validate, speed investigation of and reduce the impact of a data breach.

Product highlights

Cloud-based, agentless visibility into platform operations, user productivity, application adoption and user compliance to detect breaches and monitor for:

- Content access patterns indicative of a security anomaly
- Content use / misuse indicative of insider threats
- Irregular file access by privileged insiders

- Suspicious login attempts from both in-and-outside of the corporate network
- High volume movement of data to removable storage
- Irregular download/upload volumes

Value proposition

Behavior-based monitoring of security anomalies in cloud repositories to detect and remediate active cyber breaches.

- Protect high-value, business-critical content and applications
- Know if organizational sensitive data is the target of advanced cyber attack
- Understand if compromised hosts are accessing or editing content in any way
- Minimize mean-time-to-detect content access breach
- Reduce risk of breach by accelerating response
- Stop unwanted user behavior and access
- Gain deep, data-driven insight and context to make better decisions and improve overall security

Key Integrations

- OpenText™ Content Suite
- OpenText™ Documentum
- OpenText™ Intelligent Capture
- OpenText™ InfoArchive
- OpenText™ xPression
- Microsoft™ SharePoint
- Microsoft™ SharePoint Online
- Microsoft™ OneDrive
- Box™
- IBM™ FileNet
