OpenText™ Axcelerate™ for the DACH region

Automation, analytics and visualization for fast and effective investigations

Manage externally-mandated investigations quickly and confidently

Find the facts in internal investigations and audits

Comply with Germany's data privacy laws with flexible deployment options

Get resource support and expert services as needed

The variety of regulations and the rigour applied to investigations carried out in Germany, Austria and Switzerland (DACH Region) has made it increasingly important for enterprises to establish and adopt best practice processes and technology for acquiring, culling, investigating and analyzing growing volumes of data and documents while safeguarding personal and sensitive data.

OpenText™ Axcelerate™ is a powerful platform for quickly finding the key evidence for investigations, from collection and processing to analysis and production of data when needed. Built with advanced analytics and machine learning tools available from the very start of projects, Axcelerate delivers investigative capabilities with a fully integrated, intuitive interface that helps investigators find the facts quickly.

Manage externally-mandated investigations quickly and confidently

Externally-mandated investigations include competition, antitrust and cartel investigations along with white collar investigations into tax issues, corruption and fraud. Externally-imposed investigations also include regulatory investigations from overseas sources and whistleblower allegations that are internally triggered but externally enforced.

opentext™

Axcelerate helps investigators rise to the challenge of externally-mandated investigations by being able to collect, process and analyze data sets of any volume quickly and accurately. The breadth of search filters and depth of analytics and predictive tools to find relevant evidence fast can turn big burdens and substantial distractions into a quick and efficient workflow supported by rich visualization to derive insights easily.

Axcelerate also helps show regulators and other external stakeholders that the requirements are being taken seriously and any issues can be acted on at speed. Instead of responding to requests for updates with what activity is planned, regulators can be shown what has been done.

Find the facts in internal investigations and audits

Internal investigations and audits include wrongful dismissal complaints, harassment and discrimination allegations, compliance investigations, C-Suite vetting, M&A due diligence investigations and Intellectual Property and trade secret theft investigations, among others.

In addition to search filters, predictive tools, analytics and visualization, Axcelerate empowers fast and effective internal investigations through automated concept grouping and phrase analytics to home in by topic and through automated identification of people, places and organizations to identify the business entities, locations and actors involved in the situation.

Comply with specific DACH and EU regional data privacy laws with flexible deployment options

Axcelerate can be flexibly deployed to meet an organization's data privacy requirements, whether on-premises, in the cloud or as a hybrid implementation. Alternatively, Axcelerate can be deployed on a mobile unit with no internet connectivity to assure that data remains in situ.

Unlike other discovery and investigations platforms, Axcelerate is fully end to end, which even includes robust tools for detecting and redacting personal and other sensitive data if required, for example to produce for an overseas agency or lawsuit. These tools include a library of pre-configured personal data patterns that are supported through their own smart filters for easy access and execution, a regular expression ("RegEx") engine for custom patterns and the ability to redact documents individually or in bulk.

Get resource support and expert services as needed

OpenText is also an Alternative Legal Services Provider (ALSP) that uses its own technology to provide the broadest range of direct-from-vendor services in the industry. Services to support investigations include Recon Investigation Services to rapidly locate evidence and gain insights into patterns, gaps and relationships while ensuring that evidence is not overlooked; forensic data collection to quickly assemble the potential evidence; and digital forensic services to assess data access and manipulation issues to identify falsified documents or see where trade secrets may have been compromised.

opentext™

OpenText Axcelerate features	
Connectors	Extensive turn-key connectors for general databases, directories, file systems and numerous content platforms (on-premises and Axcelerate Private Cloud installations only)
Multi-faceted concurrent search	AI-enhanced search allows for multiple concurrent queries to be fielded in tandem. This saves time compared to running sequential individual searches and produces more effective results. For example, run several Boolean and natural language searches in a single query for optimal results. Powered by OpenText MindServer.
Data processing	Refine documents to make them ready for analysis, including applying OCR for imaged files, deduplicating multiple copies and de-NISTing. Organizes documents into families by content similarity and includes a multi-faceted search query editor.
Machine translation	Execute automated machine translations in minutes powered by AWS Translate from inside Axcelerate to translate dozens of languages into English or German, including other European and Asian languages.
Smart filters	Rapidly isolate key data with dozens of stackable filters based on metadata, content and customizable work-product.
Predictive filters	Find relevant data faster with predictive filters by using known relevant data as examples for the machine to find data with similar content and context that is also likely to be relevant.
End-of-branch email analysis	Limit review to the most inclusive emails at the end of each branch and spot any missing or unique messages for dramatic time savings.
Browser-agnostic viewer	View documents in any browser with hi-fidelity rendering, efficient pre-caching and smart tagging controls, with no additional downloads or installations, in the OpenText˙ Brava!˙ embedded HTML5 viewer.
Automated data detection and redaction	Auto-identify sensitive content in any identifiable pattern, such as PII, PCI, PHI and NPI, and automatically redact it (in bulk) when data needs to be produced.
Axcelerate Visualizer	View a highly accessible visualized display of potentially relevant content with key indicators and criteria clearly presented to facilitate fast insights. Choose what data to display and the level of detail for each item for insights into the most relevant criteria.
Hypergraph communications map	Analyze parties, domains, activity levels and timeframes around all communications of interest while visualizing email and chat conversations and networks in an elegant display.
Phrase analysis	Search with precision and breadth by easily including or excluding two-to four-word phrases across the dataset. Phrase analysis helps legal teams narrow results and discover terms they may have missed.
Concept analysis	Group documents based on the contextual meaning of associated common phrases. This pulls in additional documents of interest and allows investigators to see beyond code words and other attempts to disguise what custodians are discussing.
Sentiment analysis	Gain a faster and deeper understanding of data by categorizing documents by whether they contain positive, negative or neutral sentiments to help find key evidence by gaining insight into intent and meaning.
Entity identification	Achieve additional layers of insight for communications analysis and investigations. Axcelerate Smart Filters include integrated detection tools that automatically surface the names of people, organizations and places.
