

# OpenText™ Brava!™ for Documentum D2

View | Collaborate | Redact | Publish

Seamlessly integrated into Documentum D2, Brava!™ makes it easy to view, collaborate on, redact and transform documents. It requires only a web browser and is available in a full-featured ActiveX client, a zero-footprint HTML5 client that runs in most browsers on both PC and Mac®, and a lightweight Flash client for video markup. This enterprise-class solution adds functionality that saves money (no need to buy native software or pay for training), increases productivity (allows quick access to content, streamlines workflows) and enhances security (redaction tools remove sensitive information, secure formats reduce risk).

## View Multiple Formats in One Intuitive Interface

Brava! supports virtually any file format, including Microsoft® Office documents, PDF files, CAD drawings, videos, images and more. Brava! has a streamlined, browser-based interface with its viewers exposed as D2 widgets. Its menus are organized by function and its interface can easily be customized to suit any business process. This ease of use means that training costs are minimal and user adoption is smooth.

Brava! is fast—you spend less time waiting for files to open, refresh and transition than with other viewers. In addition, robust search features and thumbnails let you quickly find the content you need. You can search on key phrases within documents to quickly and precisely access related content.

## Streamline Workflows and Business Processes

Ideal for collaborative workflows such as review and approval cycles, Brava! lets users engage in threaded discussions with Changemark™ comments, make annotations, perform redactions and add bidirectional stamps to any document or drawing without modifying the source file (markups are saved in an XML file). In addition to indicating a document's status or providing additional information, bidirectional stamps can pull or push metadata from and to the Documentum D2 repository.

Once a review process is complete and the final document is ready for approval, Brava! makes it easy to confirm that all changes were made. Use Brava!'s compare tool to open two versions of a document or drawing—even when one is a Microsoft® Word file and the other a PDF—and display them side by side or overlaid, with changes called out in bright colors. Use Text Compare to view the differences between the documents, and even generate a report that lists them.

## FEATURES

---

**Browser-based clients:** OpenText™ Brava!™ for Documentum D2 allows file viewing and annotation within the browser.

**Excellent performance:** Search features and thumbnail views allow fast access to specific content.

**Merge documents:** Create new documents by merging files of any format.

**Compare versions:** View two versions of any file type side by side or in an overlay view.

**Vector viewing:** The Brava! ActiveX client provides crisp details at any zoom setting and precise measurements in CAD drawings.

**Metadata-enabled:** Include file data in bidirectional stamps, banners and watermarks.

**High availability:** Shared cache enhances scalability and enterprise readiness.

**Video markup:** Create and share comments and markups on video clips.

## TECHNICAL SPECIFICATIONS

---

Brava! supports virtually all document, image and CAD file formats, including PDF.

The Brava! HTML5 client is compatible with Microsoft® Internet Explorer 9, Mozilla Firefox®, Google Chrome™ and Apple Safari® browsers.

The Brava! ActiveX client extends viewing, annotation and redaction support, and includes secure Visual Rights and better CAD support.

The Brava! Flash client works with any video format supported by the Flash viewer, including MP4 and MOV.

Available in English, Dutch, German, French, Japanese, Korean, Portuguese, Simplified Chinese and Spanish localizations will be released soon.

Compare documents in different formats, such as Microsoft Word to PDF renditions.

### Protect Sensitive Content

Brava!'s redaction tools allow efficient removal of sensitive information from documents, drawings and images, either automatically with intelligent pattern matching and text search or manually with area selection tools. Finalize redactions to a new file in PDF, PDF/A, TIFF or the OpenText secure Content Sealed Format (CSF). The OpenText proprietary CSF offers password protection, file expiration (time bombing), disabling of print permissions and more. The source file is untouched.

Publish any file for archival or distribution in PDF, PDF/A, TIFF or CSF. You can burn in markups and, for additional security, add watermarks and banners such as DRAFT or CONFIDENTIAL for display on screen and/or in printed documents. Brava! can pull in metadata from the repository for watermarks and banners, in addition to adding information like the user name, the date and even the IP address of the user's machine. Brava! honors all printing and annotation rights for Documentum User Groups and Roles.

To make it easier to share sensitive documents, Brava! also offers Secure Document Link. Click on the Secure Document Link icon within the Brava! ActiveX widget to automatically launch a new email message that contains the Secure Document Link. When the recipient clicks on the URL, they are sent to the D2 login, where they must sign in to see the document.

### Merge Files to Create New Documents

Within the Brava! Document Merge widget you can create new documents by merging multiple files of any format. Just select documents, drawings or images from the D2 List widget to pull pages from, then drag and drop pages to compile a new document. You can rearrange the order or remove pages before publishing the new document as a PDF, TIFF or CSF file. (Note that Document Merge requires OpenText™ Blazon™ in addition to Brava!.)

Use the D2 List widget to quickly switch documents in the Brava! HTML viewer.

Merge pages from multiple files into a single document.

### Zoom in Tight—Text and Drawings Stay Crisp

The Brava! ActiveX client uses vector-based viewing to render any vector file, including Microsoft Office documents and CAD drawings, allowing excellent fidelity and readability at any zoom level, smooth pans and accurate rendering of CAD geometry. In CAD files, vector viewing provides accurate measurement, plotting and printing, plus support for attribute data.

### What Our Customers Are Saying

*"[Our company] remains very impressed with the quality of Informative Graphics' tools, customer service and account teams."*

*"Brava! has been invaluable for streamlining our document review process. It's very reliable and easy to use. Brava! is the standard to which all other markup tools are compared."*
