OpenText™ Compliance & Productivity Bundle for Microsoft® Office 365™

This is now a digital-first world, one in which OpenText solutions for Microsoft® Office 365™ help organizations support their digital transformation initiatives. As one of Microsoft’s leading global ISV partners, OpenText provides many enterprise information management solutions designed from the ground up to seamlessly integrate with Office 365. Now, the most commonly used and beneficial productivity and governance solutions in the OpenText portfolio have been grouped together in the OpenText Compliance & Productivity Bundle for Microsoft Office 365.

OpenText and Microsoft: Optimizing Productivity and Control Together
Microsoft and OpenText enjoy a longstanding, collaborative relationship that helps our customers lower costs, increase productivity, accelerate innovation, improve business agility, and ensure compliance with company policies and industry regulations. In fact, OpenText has been named a Finalist for the 2015 Microsoft Application Development Partner of the Year Award for its work in integrating OpenText solutions with Office 365.

Office 365 is in use in four out of five Fortune 500 companies. The service has 15 million subscribers, with a million more signing up every month. Even with this rapid acceptance, many companies still have concerns about how to best use Office 365 and the cloud space in general. A recent AIIM Research Report indicated that, of enterprises moving to use Office 365/SharePoint® Online, a majority anticipates having to implement some form of a hybrid on-premise/cloud environment.

The OpenText Compliance & Productivity Bundle for Office 365 helps enterprises transform their business in whichever environment they choose by offering increased personal and process productivity, along with enhanced control and governance, through a select grouping of tried, tested, and proven solutions:

THE OPENTEXT™ COMPLIANCE & PRODUCTIVITY BUNDLE FOR MICROSOFT® OFFICE 365™ INCLUDES THE FOLLOWING SOLUTIONS:

- OpenText® Application Governance & Archiving for Microsoft® SharePoint®
- OpenText® Brava!® for Microsoft® SharePoint®
- OpenText® Email Archiving for Microsoft® Exchange
- OpenText® Email Monitoring for Microsoft® Exchange
- OpenText® Secure MFT
- OpenText® Content Suite Platform

THE OPENTEXT™ COMPLIANCE & PRODUCTIVITY BUNDLE FOR MICROSOFT® OFFICE 365™ IS DESIGNED TO PROMOTE:

- Process Productivity, by supporting the creation of a seamless network of structured and unstructured information sharing between Office 365 and line-of-business applications to fuel business processes
- Personal Productivity, by facilitating simple, intuitive access and sharing of information inside and outside of the organization, both on-premise and in hybrid cloud environments, to drive adoption and productivity
- Control, by providing complete lifecycle information governance for content in Office 365 through the transparent classification and management of information to support privacy, security, and discovery.
OpenText™ Application Governance & Archiving for Microsoft® SharePoint®

OpenText Application Governance & Archiving for Microsoft SharePoint (AGA) extends SharePoint with industry-leading records management capabilities. It ensures that content created or managed with SharePoint meets strict DoD 5015.2 and VERS EIM guidelines. AGA enables customers to move from on-premises instances of SharePoint to Office 365 in the cloud, while maintaining core information governance and compliance processes.

OpenText™ Brava!™ for Microsoft® SharePoint®

Brava! offers easy, web-based viewing, annotation, redaction, and publishing for SharePoint, enabling better access to content and faster communication with co-workers. Brava! makes it easy to view, annotate, redact, and transform virtually any type of file—including PDFs, Microsoft Office documents, image files, CAD drawings, 3D models, and even video clips—all from an intuitive, browser-based interface.

Email Archiving and Monitoring

OpenText™ Email Archiving for Microsoft® Exchange and OpenText™ Email Monitoring for Microsoft® Exchange help companies identify and archive the email messages that are important to keep and manage that information according to consistent record policies. They integrate with the Office Outlook™ desktop client and Outlook Online to provide a rich, interactive experience with Office 365 email.

OpenText™ Secure MFT

OpenText Secure MFT (Managed File Transfer) solves the problem of enterprise email not being able to handle extremely large file attachments. It also eliminates the risk of non-secure email attachments and public cloud-share. It does this through an encrypted solution that exchanges files safely, keeping proprietary, confidential content secure. Secure MFT enables the enforcement of corporate governance policies throughout the entire organization.

OpenText™ Content Suite Platform

The OpenText Content Suite Platform is a comprehensive Enterprise Content Management (ECM) system designed to manage the flow of information from capture through to archiving and disposition. It provides the backbone for all OpenText Enterprise Information Management (EIM) offerings. OpenText™ Content Server is the core content repository for the Content Suite Platform.

As an example of how OpenText Content Suite Platform can integrate with Office 365, one of its components, OpenText Enterprise Connect, provides an alternate desktop interface that integrates seamlessly with Office 365 Professional Plus desktop clients. Enterprise Connect removes the complexity of carrying out ECM-related tasks for users while supporting organizational policies for capturing, storing, and retaining business information. By not having to leave familiar applications such as Outlook, Word, and Excel®, information workers can adhere to compliance mandates with minimal effort and without having to learn new ways of working with content.
