

SERVICE OVERVIEW

Digital Forensics—Analysis and Expert Witness Services

Identify the evidence needed in litigation, investigations and compliance with expert analysis and specialized skills in areas such as IP and trade secret theft, data fabrication and manipulation, recovery of deleted material and the analysis and interpretation of digital forensic artifacts.

 **Trusted and certified** experts

 **Deep expertise**

 **Expert witnesses** when needed

 **Opposing report and statement analysis**

Many investigations require looking at more than the content of documents. From the recovery of deleted data to investigations of data falsification and intellectual property theft, forensic analysis is often required to recover and identify critical data. In an investigation, there may be concerns that a party has taken steps to delete, or even wipe relevant information, or there may be suspicions that a document or email has been falsified. Digital forensic experts can help organizations see beyond the data readily available to the user.

OpenText industry accredited experts go beyond user files to identify and report on the evidence needed, digging into the binary information behind the data and identifying evidence that is not available to the typical user. This approach could establish the authenticity (or otherwise) of a suspicious document or email, identify evidence of potential intellectual property theft or recover material which had been deleted and thought to be unrecoverable. OpenText investigates and explains the evidence—ranging from informal findings to expert reports and court testimony.

Trusted and certified experts

Industry certifications assure clients that OpenText staff possess the requisite skills needed to handle their digital forensic projects. OpenText investigators hold a number of industry certifications and memberships, including EnCase Certified Expert, Certified Computer Examiner, Certified Fraud Examiner, and Fellow of the British Computer Society. Our experts adhere to numerous codes of conduct and can be relied on for their skills and professionalism.

Deep expertise

OpenText experts have significant experience and expertise in investigating matters including intellectual property theft investigations and falsification of emails and documents. They also conduct open source investigations and other digital forensic work, such as the recovery of deleted material. OpenText experts specialize in employing dedicated forensic tools designed from the ground up for digital forensic analysis. These tools have undergone extensive testing and peer-review within the industry, and in many cases have been approved during criminal and civil cases in numerous jurisdictions.

Expert witnesses when needed

OpenText provides reporting at the level needed, from an informal discussion of what has been identified to a summary of findings that could be provided to the other side in an effort to reach settlement or to effectively demonstrate a case. OpenText can also provide a full expert report compliant with rules such as Civil Procedure Rules Part 35 in the UK for provision to the court. Court testimony can also be provided if required.

Opposing report and statement analysis

OpenText investigators have significant experience analyzing reports and statements from opposing experts, identifying inconsistencies, omissions and incorrect statements, where they might exist, and offering alternative explanations and insight.

Summary

Digital Forensics Analysis and Expert Witness Services from OpenText are provided by industry recognized experts, with access to leading tools and methodologies, including OpenText™ EnCase™, the gold standard in forensics technology and OpenText™ Axcelerate, a flexible investigations and eDiscovery platform. Whether insight into suspected IP or trade secret theft, data fabrication or manipulation, the recovery of deleted material or the analysis of digital forensic artefacts is needed, OpenText provides the specialized expertise.
