responsibility
for upgrades
and updates
to OpenText

Accelerate
deployment
and time to
value on your
IM investments

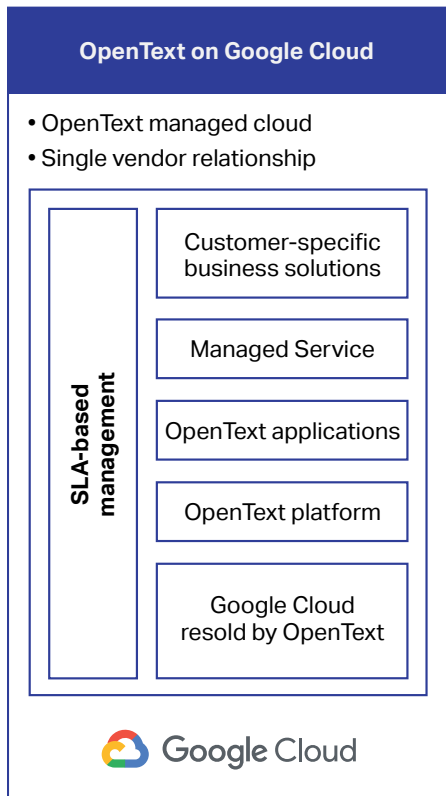

More than ever before, enterprises are looking to the cloud—not only for security, scalability and access to new technologies— but to deliver real business value. By 2022, public cloud services will be essential for 90% of business innovation.¹ And by 2025, the sum of the world's data is expected to swell to more than five times its current size.² For many, the key to competing and winning in this rapidly transforming digital economy is to access Information Management (IM) workloads in the cloud to derive greater insight and value from their information assets—and do so at scale, in realtime, and within a completely secure and compliant environment.

With OpenText on Google Cloud, you have the flexibility to choose a managed service solution from the most comprehensive suite of IM products available in the cloud today, delivered on the world-class infrastructure of Google Cloud. The partnership offers optimized environments for IM solutions running on Google Cloud, backed by a single, best-in-class service level agreement (SLA) that covers every element of your solution, including the IM application, cloud infrastructure and managed service operations—a commitment that is unmatched by any other cloud managed service provider.

Whether you are looking to migrate your existing on-premise workloads to the cloud or are a new adopter looking to leverage a cloud-first deployment strategy, OpenText on Google Cloud will enable your organization to not only reduce IT expenditure but also optimize your workforce, increasing employee productivity and shifting valuable resources to higher value business activities and innovation.

Reduce costs

As the resource commitments needed to run on-premises software increase year over year, they become a barrier to innovation. Organizations can reduce operating costs by 30% by adopting a cloud-first approach. OpenText on Google Cloud removes much of the capital investment required to support IM applications on-premises, while cloud managed services remove many of the direct costs associated with system management and support.

Increase business agility

Leveraging a "lift and shift" approach, you can migrate your existing IM applications and data from their on-premises deployment to Google Cloud in a single move. The major benefit of this approach is that the system is ready to go live as soon as the migration is complete, shortening the time to value.

Further, with OpenText on Google Cloud, new IM solutions are faster and easier to deploy, in sharp contrast to the typical timeline for an on-premises deployment. The hardware, storage and infrastructure are already in place and pre-optimized for the application being implemented.

Turnkey integrations

Enable the effective integration of your organization's IM solution with other leading applications in your enterprise such as ERP, CRM, HR or financial systems, many of which are SaaS applications operating outside of the corporate firewall and difficult to integrate in an on-premises environment.

In addition, you will have the option to leverage intelligent Google add-ons to your IM managed service, such as embedded Artificial Intelligence (AI), Machine Learning (ML) and Google analytics, data visualization and BI tools for a 360 degree view to drive smarter business decisions.

Boost employee productivity

With automatic software upgrades and patches, organizations no longer need to upgrade their IM solutions and users will always be working with the latest version of their IM solution, improving employee productivity and job satisfaction and preventing situations where users seek to introduce their own solutions to solve their specific business issue.

Take the burden off IT

OpenText on Google Cloud will free internal IT staff from the ongoing burden of support tasks associated with IM software and infrastructure management and allow them to address higher value activities or other IT improvements that impact the business. In addition to the hard dollar costs involved, there are opportunity costs imposed on the organization when innovation initiatives are delayed or overridden by a lack of IM-skilled staff and the need to support routine operations.

Seamless transition to the cloud

OpenText on Google Cloud gives organizations immediate access to the benefits of an expert managed service on public cloud infrastructure to enable a reliable, and high performing IM solution backed by world-leading industry and technology expertise, professional services and operational support.
