

DECISIV®

SEARCH

Search and access information scattered across departments, content repositories, and beyond with Recommind's award-winning analytics.

CONCEPTUAL SEARCH FOR A BROADER REACH

Decisiv's search engine leverages concept analysis to find specific information even without knowing the "right" keywords. The customizable relevancy engine comes preconfigured for the unique needs of legal professionals. Filters and search criteria stack and dynamically update results to guide users to the most relevant content. Enhanced context abstracts and phrase analysis show how keywords are used, making it easy to click into the right document.

ORGANIZATION-WIDE ACCESS TO PROJECTS AND DOCUMENTS

Attorneys and support staff need access to information about the matters and expertise within the firm, including prior work product. By extending search into non-traditional data repositories such as DMS, HR, and CRM systems, the Decisiv Search Matters and Expertise module provides a more comprehensive view of the firm's tacit knowledge. Decisiv has turn-key integrations with the most popular applications like eDOCS and SharePoint. Searches can be focused according to department, office, and author for the most accurate results.

"Many search platforms oversimplify our information-access challenge. What sets Decisiv apart is its ability to respect the relationship between the multiple dimensions of our information: the text, the people involved, and the related project or matter—which sets the context around the information."

UNIFIED CONCEPT SEARCH ACROSS THE ENTERPRISE POWERED BY RECOMMIND'S PROPRIETARY CORE® ANALYTICS PLATFORM

SOPHISTICATED SEARCH AND SECURITY

Decisiv includes a full suite of search analytics, visualizations, and Smart Filters to quickly narrow results on criteria like department, date, author, file type, and more. Organize results by date to understand document velocity and browse the most complex documents using phrase analysis and keyword hit navigation. With support for over 400 document types and 30 languages, finding the right information regardless of location is simple. Decisiv also includes security tools to support ethical walls and control document access.

HOW DECISIV SEARCH WORKS

Decisiv securely crawls and indexes information from any source, including document management systems, intranets, email archives, contact management databases, and web sites. From the indices, Decisiv creates concept models tailored to the legal information contained within the enterprise based on content and extended metadata. These concept models significantly improve the quality of enterprise search results by identifying related information across different sources and ranking search results by relevance. As documents change and new information is added, Decisiv incrementally crawls and updates the models, ensuring that search results are accurate and current.

“Recommind deeply understands the way lawyers work, and it shows in their products. Decisiv Search improves our efficiency and makes it easy for each of our lawyers to draw from the full intellectual power of the firm.”

Jeff Rovner
