Smarter EDI and B2B integration

In a competitive business environment, maximizing your investment in NetSuite® is crucial. Competing IT and resource priorities should not make that a challenge. OpenText™ Business Network for NetSuite® extends your NetSuite platform with powerful EDI and B2B integration that is quick and simple to set up and easy to manage, and enables you to automate and simplify your supply chain operations and other business-to-business processes.

As a certified partner of NetSuite, OpenText Business Network and its B2B Integration and EDI solutions make it easy to integrate NetSuite quickly and seamlessly with all your trading partners and internal systems:

- Automate your supply chain operations using easy, intuitive self-service tools, integration expertise, and customer-specific flexibility.
- Accelerate business application integrations, speed up data transmission for real-time visibility, offload IT burdens, and deliver greater operational efficiency.
- Leverage market-leading technologies and services that scale. Connect once, reach anything!

Bringing enterprise-grade EDI and B2B integration to any size company

The automatic creation and exchange of orders, order confirmations, shipment notifications, invoices, payments, and other critical transactions eliminate the manual work that causes bottlenecks and errors. Whether your company buys or sells goods, or both, you can quickly connect with any trading partner using intuitive, self-service, turnkey tools, and comply with their EDI requirements, no technical EDI expertise required.

We provide a single, secure, unified cloud integration environment, OpenText™ Trading Grid™, which allows companies of any size to seamlessly integrate with their trading partners, including logistics carriers, distributors, and financial institutions located anywhere in the world.

Our OpenText Business Network for NetSuite solution, available on SuiteApp, leverages NetSuite's APIs and is "Built for NetSuite" verified by NetSuite, so you can be confident that it will meet all NetSuite standards for quality and security.

This helps simplify and accelerate the digitization and optimization of information flows. It further provides a scalable digital foundation for business growth, allowing you to select the right capabilities and services to meet your current requirements while retaining the option of adding capabilities and scaling up the data volumes in the future without needing to migrate to a new platform.

Additional B2B and EDI integration considerations

Business users can access real-time information and process status through Oracle NetSuite system dashboards and reports. An integration visibility tool embedded within NetSuite provides detailed information about the overall process and individual messages, offering a real-time view of data flowing through the platform.

Pre-built adapter kit and self-service tools

- Automates supply chain operations by eliminating manual bottlenecks and optimizing processes
- Shortens implementation time and reduces costs
- Connects easily and seamlessly to and integrates with NetSuite in real time
- Accelerates onboarding of trading partners
- Leverages NetSuite SuiteTalk REST APIs

Unified EDI and B2B integration platform

- Leverages the world's largest business network, OpenText Trading Grid, to seamlessly integrate with more than one million pre-connected trading partners (customers, suppliers, logistics carriers, distributors, financial institutions)
- Enables communication and data exchange between systems, applications, and devices using virtually any method (e.g. API, EDI, XML, and CSV)
- Validates documents as they arrive and automatically sends them back if mandatory fields are incomplete or wrong
- Allows you to manage all transactions in real time for end-to-end visibility of all your trading partners in a single dashboard, where you can view details to improve business decision-making
- Provides a scalable and future-proof, cloud-based integration environment with high availability

Flexibility

- Scales to grow with your business needs with no need to migrate to a new platform
- Supports a standard set of document and communication protocol formats, but almost any format and EDI standard can be managed
- Provides the option to move from a partially managed to a fully managed service
- Connects to other business applications (internal as well as external)

EDI and B2B expertise

- Ensures projects are accurately planned, staffed, and delivered with no delays and no surprises, based on more than 30 years of experience managing integration services of all sizes and complexities
- Includes industry expertise in apparel, footwear, and accessories; healthcare and life sciences; manufacturing; retail; transportation and logistics; and wholesale distribution
- Provides essential access to skilled integration experts, allowing organizations to leverage strategic partners to extend their internal IT capabilities
- Provides more than 1,400 customer support resources that can help when required

Why OpenText is the right partner for Oracle NetSuite EDI integration

OpenText provides a single, unified integration environment that allows companies of any size to seamlessly integrate with more than one million pre-connected trading partners using our network. The range of partners spans suppliers, logistics carriers, distributors, and financial institutions anywhere in the world, accelerating onboarding, data exchanges, and information flows using a secure, scalable digital backbone built for growth.

All OpenText integration solutions leverage OpenText Trading Grid, a modern, unified cloud integration platform. Organizations can select the right capabilities to meet their current requirements with the option to add capabilities and scale up data volumes without needing to migrate to a new platform.

Enhance agility, accelerate project delivery, and lower costs

A successful integration strategy enhances agility, accelerates project delivery, and lowers the total cost of ownership across integration solutions. OpenText Business Network and B2B integration solutions enable seamless integration with both EDI and APIs and include configurable EDI-to-API integration adapters for NetSuite, fast tracking integration regardless of technology and laying the groundwork for end-to-end supply chain visibility.
