

OpenText Web CMS version comparison chart

Learn about what's included in the latest OpenText Web CMS release.

Every release of [OpenText™ Web CMS](#) builds on the last, and the latest raises the bar on both content governance and operational efficiency. OpenText Web 26.2 introduces a dedicated Unpublish Workflow and Upgrade Configuration Utilities, giving content and IT teams more control over what lives on their sites and reducing the friction of staying current.

For organizations running older versions, the gap is not just about missing features. It is about the compounding cost of manual processes and slower time to value. Use the comparison chart below to quickly assess where you are today and learn about the value you unlock with an upgrade.

Product feature	Benefits	26.x	25.x	24.x
Unpublish Workflow	Remove content from live sites without deleting or losing version history.	✓		
Upgrade Configuration Utilities	Cut upgrade time by simplifying configuration file analysis and merging.	✓		
Azure certification	Deploy confidently on Azure with fully certified, supported infrastructure.	✓		
Improved dependency management	Reduce version conflicts and streamline library management across environments.	✓		
Prompt-based design creation	Turn a text description into a ready-to-use experience layout instantly.	✓	✓	
Import Figma/Auto-generate templates	Convert Figma designs into live CMS templates without developer handoff.	✓	✓	
Image to design	Transform a screenshot or mockup image into an editable CMS template.	✓	✓	
Build content templates from AI designs	Accelerate campaign launches by generating reusable templates from AI designs.	✓	✓	
Prompt-based, AI-assisted forms creation	Build web forms in seconds using natural language prompts, no coding needed.	✓	✓	

Product feature	Benefits	26.x	25.x	24.x
Expanded data source support (CSV, JSON)	Connect web components to a wider range of data formats with less effort.	✓	✓	
Workflow enhancements (schedule publishing workflow, preview pending approvals, preview attached assets)	Control when content publishes and what reviewers can see before it goes live.	✓	✓	
Expanded dynamic table component functionality	Display and manage complex data sets more effectively within web pages.	✓	✓	
Certified support for base K8S container framework	Deploy on Kubernetes with confidence using a fully certified container baseline.	✓	✓	
Flexible layout components – columns	Give content teams more control over page structure without developer support.	✓	✓	
OpenShift (OCP) certification and support	Deploy on Red Hat OpenShift with full certification and enterprise support.	✓	✓	
Sync with Active Directory user/group via OTDS	Automate user provisioning and access management through existing AD infrastructure.	✓	✓	
Experience Aviator™ — text creation/optimization	Generate and optimize web copy faster using AI built directly into the CMS.	✓	✓	✓
Low-code data source enhancements	Connect and display external data on pages without writing custom code.	✓	✓	✓
Component event and listener enhancements	Build richer interactive experiences with more granular component event control.	✓	✓	✓
Localized sitemap improvements	Improve search visibility for regional content with more accurate localized sitemaps.	✓	✓	✓
Secure digital communications from OpenText™ Communications to web/mobile	Deliver secure, personalized communications from CCM directly to web and mobile.	✓	✓	✓
Developer and technical documentation improvements	Reduce onboarding time and support load with clearer, more complete documentation.	✓	✓	✓

Product feature	Benefits	26.x	25.x	24.x
JDK 17 upgrade	Benefit from improved performance, security patches, and long-term Java support.	✓	✓	✓
Update AI with Gemini for Aviator	Access more powerful AI-generated content with Google Gemini powering Aviator.	✓	✓	✓
IPv6 certification	Meet modern network requirements with certified IPv6 support for deployments.	✓	✓	✓
Additional OOTB Dynamic components	Accelerate time to launch with more pre-built, data-connected components.	✓	✓	✓
Secure communication for web deployments	Protect web traffic and data in transit with hardened deployment security.	✓	✓	✓
Enhanced security for eStudio sites/pages	Reduce attack surface and protect content authoring environments from threats.	✓	✓	✓
Migrate standard reports to MBI&R	Consolidate reporting within the OpenText analytics ecosystem for unified insights.	✓	✓	✓
