

Version up. Value up. Accelerate with the latest OpenText AI Operations Management.

Discover how the newest release of OpenText AI Operations Management helps you cut costs, boost resilience, and unlock innovation

Upgrading to the latest OpenText™ AI Operations Management release gives you more than new features, it maximizes the return on your existing investment. This features list highlights four reasons to upgrade now: maximize ROI through continuous innovation, lower total cost of ownership by eliminating costly workarounds, strengthen resilience with built-in security and risk mitigation, and future-proof your technology by adopting new capabilities as they emerge. By keeping your core platform current, you gain a competitive edge, ensure business continuity, and position your organization for digital transformation.

Feature name	Short description	2026	2025	2024	2023	2022
Aviator: Dynamic Context	AI now contextually summarizes events based on historical resolution data from OPTIC Data Lake.	26.2				
Core AppO: Log Aggregator	New “Logs” widget for 26.2 provides unified monitoring for app, infra, and network logs in a single view.	26.2				
Dynatrace Connector 2.0	Enhanced metric reporting and bidirectional synchronization for faster MTTR with third-party tools.	26.2				
Forecast Metrics CP	Predictive performance metrics included in Oracle and MS SQL database content packs.	26.2				
SQL Query Descriptions	Out-of-the-box Flex reports now include query documentation to help admins build custom dashboards.	26.2				
Unified Monitoring Edge	Centralized management for Monitoring Service Edge, simplifying large-scale containerized deployments.	26.2				
BPM to AppO Migration Suite	Modernized Java-free GUI and automated tools to migrate thresholds and configurations to Application Observability.	26.1				
Dynatrace Application Sync	Expanded synchronization for application CIs and metrics to provide deeper App-to-Network insights.	26.1				
Predictive Forecast Reporting	Advanced trend analysis and capacity planning specifically for Oracle and MS SQL database metrics.	26.1				
Metric Query Library	Library of well-documented, pre-defined queries to simplify the creation and extension of custom dashboards.	26.1				

Feature name	Short description	2026	2025	2024	2023	2022
Unified Log & Metric Widget	New UI widget that allows admins to view logs and metrics side-by-side on a single dashboard page.	26.1				
NoSQL Performance Troubleshooter	Immediate application performance insights for MongoDB, MySQL, and Cassandra without requiring SQL knowledge.	26.1				
Operations Platform Data Insights	Architectural optimizations providing faster processing and deeper visibility into core platform telemetry.	26.1				
Centralized Anomaly Alerting	Improved outcomes for third-party alerts with central threshold and anomaly configuration for Dynatrace.	26.1				
Dynamic baseline monitoring	Automatically adapts baselines to changing conditions.		25.4			
Embedded synthetic monitoring	Embedded synthetic monitoring for unified dashboards and consistency.		25.4			
Operations platform	Secure journey to cloud with optimized certificates and composable platform.		25.4			
Connector	Consolidate, correlate, reduce noise, and enable third-party reporting.		25.4			
Unified log monitoring	Seamless log exploration across apps, infra, and networks.		25.4			
System performance dashboards	Quickly build dashboards linked to global CI and causal models.		25.4			
New version support	Continuous browser and technology updates ensure compatibility.		25.2			
On-premises deployment for AppO	Deploy Application Observability on premises for local control.		25.2			
Log exploration	Centralized log analysis with quick filtering and visual assistance.		25.2			
OpenTelemetry Collector Content Pack	Add-on OTel Collector processes and exports telemetry with centralized management.		25.2			
BPM OpenTelemetry integration	Link BPM with App Observability to reduce MTTR and focus on real use.		25.1			
AIOM Express - Private Cloud	Private-cloud-based event management solution.		25.1			
Unified anomaly detection	Integrated anomaly detection delivers immediate insights from live metrics.			24.4		

Feature name	Short description	2026	2025	2024	2023	2022
Custom metric exploration	Collect and explore custom metrics to accelerate MTTR and gain insights.			24.4		
SiteScope monitoring	New HTML5 UI with added monitors, stronger security, OpsB integration.			24.4		
Aviator for AIOps	Faster issue resolution using LLM-powered Aviator.			24.4		
Service-level objectives (SLOs)	Create, inspect, and act on custom SLOs across applications and infrastructure.			24.4		
Application Observability	OpenTelemetry-based observability for end-to-end traces, metrics, logs.			24.2		
Topology sync across OBMS	Simplified configuration and reduced maintenance across modules.			24.2		
Reporting enhancement	Role-based access and security governance in Flex Reporting and BYOBI.			24.1		
Instrumentation UI available for OpenShift	Simplifies policy deployment and monitoring automation for admins.				23.4	
	Provides agentless monitoring support across OpenShift environments.				23.4	
Hyperscale Observability	High-performance observability for IaaS/PaaS across AWS, Azure, GCP, K8S, VMware.				23.4	
OBM in OPTIC One GUI	Unified UI visualizations across OpsBridge capabilities.				23.4	
RTSM HTML UI	HTML UI for RTSM administrative tasks.				23.4	
Enhanced third-party integration	Cross-domain, cross-vendor metric reporting (Dynatrace, AppDynamics).				23.4	
Support for Grafana	Build reports from OPTIC Data Lake using familiar BI tools.				23.2	
Monitoring Control Center UI (MCC)	Single console improves APM productivity and efficient workflows.					22.4
Bring your Own Kubernetes (BYOK)	Drive ROI by standardizing choice of Kubernetes distribution.					22.4
AWS CloudWatch/ Azure Monitor alerts in OBM	Faster troubleshooting for applications across on-prem and cloud.					22.4

Feature name	Short description	2026	2025	2024	2023	2022
Operations Bridge - SaaS	Get Operations Bridge performance management with fully hosted solution.					22.4
Flex reports and dashboards (OPTIC One)	Fast web-based reports and dashboards.					22.4
Third-party identity providers	Protect Operations Bridge with user authentication choice.					22.4
Metrics collection for third-party tools	Normalize and collect third-party metrics for better insight.					22.2
