

OpenText TrustedLink Windows

Stand-alone EDI for Windows with AS2 and back-office integration

Benefits

- Access all-in-one EDI interface
- Protect key relationships at a low cost
- Cut manual entry with automation
- Onboard trading partners fast

Meeting large-partner EDI requirements shouldn't demand an enterprise stack. An effective ecommerce program reduces errors, costs, and cycle times. OpenText™ TrustedLink Windows delivers stand-alone, PC-based EDI translation for small to mid-market teams.

Accelerate setup and onboarding

Installation and trading partner wizards make setup fast, and an intuitive browser interface reduces ramp-up time for new users. OpenText TrustedLink Windows can automatically create a partner profile when a transaction arrives from a previously unknown trading partner, helping teams get productive quickly.

Connect and communicate with all partners

Out of the box, OpenText TrustedLink Windows exchanges EDI through VAN mailboxes. For direct, internet-based protocols or partner-specific requirements (e.g., AS1/AS2/AS3 and other established standards), pair OpenText TrustedLink Windows with OpenText™ Data Integrator, allowing users to send and receive any data type via multiple connectivity methods for the most flexible business partner communication without customized programming.

Resources

OpenText™ Trading Grid Messaging Service, the world's largest value-added network (VAN), pairs naturally with OpenText TrustedLink Windows' VAN connectivity. It delivers secure, reliable any-to-any exchange via EDI mailboxes, plus end-to-end visibility, exception management, and enterprise-grade security/SLAs.

OpenText™ Data Integrator adds direct, internet-based connectivity to OpenText TrustedLink Windows, supporting AS1/AS2/AS3, SFTP/FTPS, and HTTPS with built-in certificate management, encryption, digital signatures, and MDN non-repudiation. It centralizes partner policies, automates retries and scheduling, and provides tracking and alerts for operational visibility.

Protect business relationships and save time

An extensive forms library makes it easy to see each partner's preferred documents and translate based on their requirements. Time-saving features, such as quickly turning an inbound document into an outbound one (e.g., purchase order to invoice), reduce manual data entry. Back-office integration and task automation further streamline end-to-end processes.

Handle complex mapping with ease

With OpenText's transformation mapping tool, organizations can meet the complex transaction requirements of larger partners. Intuitive wizards and drag-and-drop design accelerate onboarding, while advanced users can add JavaScript to handle sophisticated translation rules.

Streamline the exchange of EDI with trading partners

Quick to install, simple to use, and cost effective, OpenText TrustedLink Windows streamlines the exchange of EDI with trading partners. Built for the Microsoft Windows platform, it provides everything a small to medium-sized business needs to run an eCommerce/EDI program with ease and precision.

Product feature	Description
Desktop EDI, simplified	Access all EDI functions from a single, easy-to-use Windows interface.
Drag-and-drop mapping	Create and process transactions with new partners quickly and easily.
Back-office integration	Tie inbound and outbound EDI directly to your business applications to boost efficiency.
Task automation	Schedule communications, printing, and translation to save time and reduce manual work.
Extensive forms library	Manage partner changes with more than 10,000 data-entry and print forms.
