## Building the digital thread for manufacturing

Manage information across the manufacturing value chain

OpenText products play a vital role in building your digital thread for manufacturing by providing comprehensive solutions for information management, business network integration, data visibility, and process automation. Our platform enables seamless data flow across your entire product lifecycle, connecting engineering, production, supply chain, and customer service into a unified digital ecosystem that drives operational excellence and innovation.

- Unified information access OpenText centralizes your manufacturing data across systems, giving teams instant access to critical documents, specifications, and quality records from a single source of truth.
- 2 Seamless supply chain integration Our platform connects your suppliers, partners, and internal operations, enabling real-time collaboration and visibility across the entire supply network.
- **End-to-end traceability** Track components and products throughout your lifecycle from design to delivery, maintaining complete digital records for compliance, recalls, and continuous improvement.
- Automated workflow management Streamline your approval processes, change orders, and quality protocols with configurable workflows that reduce delays and eliminate manual handoffs.
- Analytics-driven insights Transform your manufacturing data into actionable intelligence through powerful analytics that identify bottlenecks, predict maintenance needs, and optimize production efficiency.
- **Enhanced regulatory compliance** Maintain comprehensive audit trails across your operations, automatically generating documentation needed for industry and governmental compliance requirements.

Safe workplace for manufacturing >

"The future of the safety movement is not so much dependent upon the invention of safety devices as on the improvement of methods of educating people to the ideal of caution and safety."

Walter Dill Scott, Industrial/Organizational Psychologist
