# Upgrade to OpenText Enterprise Security Manager Next Generation

Don't miss out on the latest enhancements, integrations, and features

## Benefits

- Best overall experience
- Easier to use, even more powerful
- Native SOAR
- Fully containerized

The new OpenText™ Enterprise Security Manager Next Generation offers advanced capabilities that can help your team stay ahead of evolving threats while making the most of their limited time and resources.

Take advantage of exciting new features and enhancements that simplify rule creation, enhance threat analysis, streamline your day-to-day operations, and more. These updates are designed to help your team work more efficiently, tackle emerging challenges, and get the most out of your security investment.

## Best overall experience

With all the new enhancements, additions, and integrations to the portfolio, Enterprise Security Manager Next Generation provides users with the best SIEM experience the product line has ever offered, including:

- Fully containerized
- Modern Web-UI
- Updated interactive dashboards and reporting
- Simpler, stronger standards-based component authentication
- Web-based content development
- Improved MITRE ATT&CK reports and dashboards
- Tighter integration between real-time and behavior AI/ML-based analytics

An upgrade should always be under consideration to ensure your software is operating at its peak and providing the maximum benefit to your company and its operations.

## Easier to use, even more powerful

Create and edit rules using a simplified web-based wizard that requires fewer windows to operate and is easier to learn and adopt. This new tool is particularly valuable for newer users who can now learn faster, increasing their value to their security teams.

Simplified certificate management and deployment enable SOC teams to save time with reduced administrative overhead, allowing them to focus their efforts on more important tasks. Additionally, enhancements to notification management and list performance, along with updated components, elevate to provide a more robust, yet simpler, SIEM experience.

## Services

**Support packages:**
OpenText has a full range of upgrade support services, which can be engaged at different levels to best meet your needs, including our standard Customer Support, as well as our Premium Support offering and short-term support through OpenText Flexible Credits.

**Professional services:**
Our professional services consultants will work with you on upgrades and to develop secure business solutions to meet your business goals. Our specialists can help with the upgrade preparation process, as well as the upgrade itself. OpenText Professional Services is a paid option that saves you a significant amount of time and provides a valuable combination of expert advice and services.

## Unlock native SOAR

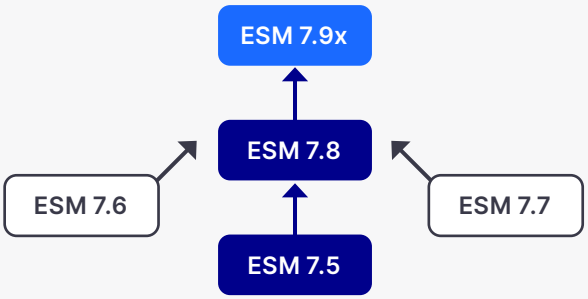

OpenText™ Security Orchestration Automation and Response (SOAR) was introduced as a native integration in Enterprise Security Manager 7.4 and has continually advanced since then. Adding SOAR to your Enterprise Security Manager deployment doesn't incur additional licensing costs and provides a massive boost in automated response capabilities. Accelerate incident response, take advantage of pre-built and customizable playbooks, and improve collaboration between people, tools, and processes.

## Fully containerized

For those waiting for a containerized version of Enterprise Security Manager, the wait is over. Enterprise Security Manager Next Generation introduces a fully containerized solution that is not just a lift-and-shift, but rather an integrated containerized solution that simplifies deployments, offers greater deployment flexibility, and enables seamless integration with more powerful, search, reporting, and storage capabilities while also supporting greater scalability and performance.

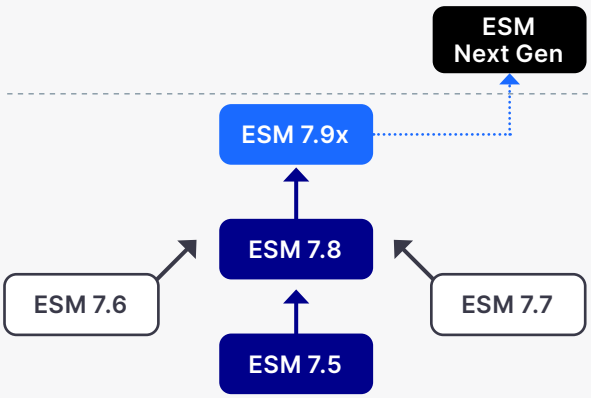

## OpenText Enterprise Security Manager (ESM)
Upgrade paths

### ESM Legacy upgrade options

ESM 7.9 will continue to be maintained with security patches until its planned sunset in 2029. However, no new features or capabilities will be added.

### ESM Next Generation

All content from ESM 7.x can be exported and imported into ESM Next Generation ensuring protection and reuse. In addition, data may also be migrated. However, as ESM Next Generation is a containerized application, an in-place upgrade is not supported.
