

Business Workspaces Workshop

Streamline content-centric work, boost collaboration, ensure governance and compliance, and be prepared to integrate AI in your content management platform

Benefits

- Learn how to prepare AI-ready content structure
- Discover Business Workspaces core functionality in a controlled environment
- Evaluate use cases for your business and your data
- Create a roadmap for future production deployment

The modern enterprise must ensure its vast content repositories are structured and governed not just for compliance, but also for intelligent consumption by the next generation of AI and automation tools. This engagement focuses specifically on preparing an AI-ready content structure using the power of OpenText Business Workspaces. The primary goal is to define a high-impact use case; validate the Business Workspaces core functionality in a safe, controlled environment; and rapidly demonstrate value using out-of-the-box configurations. At the end of this engagement, you will receive a roadmap about requirements and steps to implement Business Workspaces in your production environment.

Learn how to prepare AI-ready content structure with Business Workspaces

The engagement begins with a phase to identify strategic alignment. We conduct a focused discovery session with key stakeholders to understand challenges and define the optimal Business Workspaces structure for effective AI consumption.

Discover Business Workspaces core functionality in a controlled environment

A business workspace can combine the key features of modern enterprise information management and collaboration: business data, content, people, and tasks. We will delve into the capabilities of Business Workspaces from a content structure perspective and define a meaningful entity in your organization as business object, for example, customers and sales orders, processes and projects, material and products, production plants and facilities, or even a community of people with common interests.

Evaluate use cases for your business and your data

The modern enterprise must ensure its vast content repositories are structured and governed not just for compliance, but also for intelligent consumption by the next generation of AI and automation tools. This engagement focuses specifically on preparing an AI-ready content structure using the power of OpenText Business Workspaces. The primary goal is to define a high-impact use case; validate the Business Workspaces core functionality in a safe, controlled environment; and rapidly demonstrate value using out-of-the-box configurations. At the end of this engagement, you will receive a roadmap about requirements and steps to implement Business Workspaces in your production environment.

Create a roadmap for future production deployment

The final step is to summarize actionable insights for your next stage. This involves summarizing previous assessments, discussions, and tests into definitive, actionable results that enable you to plan and proceed based on the outcomes of the Business Workspaces Workshop:

- Content structure assessment
- Configured PoC Business Workspaces template
- Report with key findings and path forward

Optional add-on: To gain additional value, you may want to consider supplementing this workshop with the OpenText LLM Discovery Workshop and the AI Data Readiness Workshop to ensure you are fully prepared to deploy AI with OpenText™ Content Management.

Have full confidence in OpenText

Embrace the future and accelerate your growth with AI-driven language processing.
